MANUFACTURING – RUBBER PRODUCTS

1988 – 1989
Phoenix lives up to its promise

By Ann Crofty

At the time of its listing on the Development Capital Market last October, Durban-based Phoenix Rubber appeared to have all the ingredients for success: sound management, sound strategy, sound balance sheet and sound reasons for wanting a listing. The excellent interim results it has just announced will be gratifying to supporters of the DM.

In the six months to December, taxed income increased by 349 percent to R431 000 on a turnover that was up 54 percent to just over R7 million. The performance at income level is equivalent to earnings per share of 4,1c. An interim dividend of 1,5c a share has been declared.

The actual interim results compare very favourably with forecasts made at the time of the listing. At that stage management was looking to taxed income of R306 000 and earnings of 2,9c a share. A better-than-budgeted performance from two acquisitions helped the first-half figures.

Chairman and managing director Hans Schutz appears to be confident about the second half, noting that: "Traditionally the second half of the year reflects better results than the first half and it is expected that earnings should again be ahead of forecast." Projects are enhanced by new business that the group is developing in two areas of import replacement, one of which relates to the poultry industry and the other to the dairy industry.
Tyre prices are to be increased by between 10% and 11%. Most tyre manufacturers here said yesterday that they could not yet give a specific increase figure, but said it would be between 10% and 11%.

The price increases will probably come into effect from March 1. The price of Firestone tyres went up by 11% on Monday.

Tyre prices....
By Matthew Montoya

Earnings a share were up 60%.

Darmagup 60% 96

Mr. Dorey, a director, said the company's earnings in the year to December were up by 60% to £2.3m. This is the second year in a row that the company has seen a significant rise in earnings.

The company's turnover increased by 10% to £17.4m. This is due to the increased demand for the company's products.

The company's profit margin also improved, with profits increasing by 15% to £2.3m.

Mr. Dorey said that the company is well positioned for further growth, with plans to expand its operations in the near future.

The company's share price also increased by 20% during the year, reflecting the strong performance of the company.

Overall, Mr. Dorey said that the company is in a strong position for the future, with a focus on growth and expansion.
Protests at
multi-national
LONDON. — Sir Owen Green, chairman of the
multi-national conglomerate BTR faced a
large anti-apartheid demonstration at the annual
shareholders meeting over the labour dispute
at their Dunlop subsidiary in Natal.

He rejected appeals from National Union of
Metalworkers of South Africa (Numsa) executive members and British TUC delegates, who
said BTR headquarters had a moral duty to
intervene and secure a just settlement.

Sir Green said the Natal dispute was strictly the business of local
management.
Tyre strike ends

PORT ELIZABETH—The month-old strike involving 900 workers at Goodyear in Uitenhage came to an end yesterday after the Industrial Council for the Tyre and Rubber Industry urged all workers to return to work by tomorrow morning. Goodyear manager public relations Mr Mike London said. — Sapa
Goodyear strikers due back on job

BRONWYN ADAMS

THE month-old strike involving 900 workers at the Goodyear plant in Ultenhage came to an end yesterday after the Industrial Council for the tyre and rubber industry urged all workers to return to work today.

Volkswagen GM Ronnie Kruger said all 4 500 Volkswagen workers striking in sympathy with the Goodyear workers returned to work yesterday.

Goodyear PR manager Mike London said the company was hoping a full shift would turn out this morning.

The workers downed tools on May 13 after management announced an extension of working hours. Workers began their strike after management dismissed 31 workers for violence.
For fifth successive year . . .

Trencor hits record profits

CAPETOWN-based Trencor, the transport, tyre and manufacturing company which did well even in the recession, has achieved record profits for the fifth successive year.

Turnover for the year to June 30 is up by 29% to R514m, and attributable income has risen by an impressive 64% to R36m (R22m).

Earnings rose to 263.7c (154.3c) a share and the final dividend is 40c (22c) a share. This makes a total of 50c (30c) for the year, an increase of 67%, with the cover an unchanged 5.1 times.

Chairman Neil Jowell, whose comments are always cautious, said that what he had identified a year ago as "a modest upturn" in the economy had proved much stronger.

And although he warned that domestic prospects were uncertain he said that the international container market, which made a larger contribution than expected to export earnings, "is expected to remain buoyant in the year ahead".

Jowell said that although the dividend cover remained high "the board feels it is appropriate bearing in mind the large increase in dividend this year and the stage we are at in the business cycle."

He said the ratio of interest bearing debt to equity had increased to 33% from 24% the previous year, largely as a result of increased working capital requirements and expenditure on fixed assets. But it was nevertheless at a satisfactory level.

"Our strong financial position will enable us to capitalize on growth opportunities likely to occur in the present financial year."

- Mobile, which owns 48% of Trencor, has also achieved record results.

The directors say its 74% subsidiary Mobile Acceptances, which is engaged in financial and leasing activities, "had a good year in the face of strong competition."

Mobile lifted pre-tax income to R4.7m (R3.3m) and after-tax income to R4.1m (R2.8m).

Its share of Trencor profits rose to R14m (R8.5m) and attributable income to shareholders was R17.9m (R11.1m).

The final dividend was 11.40c (6.70c) a share, making a total of 13.75c (8.57c) with a slightly higher cover of 4.6 times (4.5 times).

HIGH LIFE FOR A DEEP DIVER
BTR Dun earns more, pays more

By Ann Crotty

BTR Dunlop has reported a 21 percent increase in turnover to R240 million (R190.8 million) for the six months to June 1988 and a 31 percent increase in trading profit to R29.7 million (R22.8 million).

Attributable profit was up 31 percent to R14.8 million (R11.5 million), equivalent to earnings per share of 64.4c (49c).

A dividend of 37c has been declared, representing a 23 percent increase over the previous year's 30c.

This means that dividend cover has been increased marginally from 1.6 times to 1.7 times, but it still looks very tight, especially compared with a competitor such as Gentyre where dividend cover is 5 times.

The directors say the industrial rubber goods market did not improve "to the same extent as the economy" because of delays in the bringing on stream major projects in the coal mining, ore beneficiations and electrical general industries.

Operating margins were up from 11.36 percent to 13.4 percent. The interim figure represents a strong improvement on the 11.5 percent reported at the end of financial 1987 last December.

Strong demand

Strong demand in the group's activities (other than industrial rubber goods) will have helped to lift prices and boost margins. Margins would also have benefited from tighter asset management.

The directors say the group traditionally does better in the second half of the year, but caution that this "depends on the state of the economy".

BTR Dunlop is on an historic P/E rating of 8.5 times at its current market price of 810c.

If the 31 percent earnings performance can be sustained for the full year, the share is sitting on a prospective P/E rating of 8.5 times.
Asia’s rubber tappers are smiling again.
And it’s all thanks to AIDS

The more the fear of AIDS spreads through the West, the more the once flagging economies of rubber-rich Eastern countries boom.

MICHAEL KROLL reports

ONE man’s pestilence is another man’s prosperity. In the wake of Aids, the international rubber industry is soaring after more than a decade at near-depression levels.

Behind the surge is an unprecedented demand for rubber gloves created by the Aids scare.

Each day in the United States new categories of workers decide that wearing rubber gloves is now indispensable for their occupations: dentists and their helpers, emergency medical teams, food handlers, tattoo parlour operators, hairdressers, toll takers and more.

On the other side of the world, the results of that demand are already visible in the world’s major rubber producing countries, Malaysia, Thailand and Indonesia.

In the rubber-rich Tawau district of North Borneo, half-finished housing developments, near-vacant office buildings and modern roads ending abruptly at the jungle’s outskirts testify to a once-booming economy brought to a sudden halt by the collapse of rubber prices in the early 1970s. The culprits were the advent of synthetics and radial steel tyres.

But today one hears a strident new optimism about the future. “You’re going to see all these projects resumed this year,” a smiling construction engineer says. “It’s the end of the burst. Rubber is king again.”

“Rubber prices are undergoing their most dramatic changes since the Korean war,” says Joe Corell, commodities expert for Southeast Asia’s largest non-banking company, Sime-Darbe of Malaysia, the world’s largest rubber exporter. The price of raw liquid latex shifted from about $1 a kilogramme just two years ago to triple that last year, finally settling just below $2 a kilogramme today.

One bit player in the price rise has been a growth in demand for latex rubber condoms.

Since 1986, when the US surgeon general first addressed the burgeoning Aids epidemic head-on by advising that “the best protection against infection right now, barring abstinence, is use of a condom,” Americans have doubled their use of condoms. Even then, only 13 percent of the population reports regularly using condoms.

The real spur in rubber demand comes from another source — latex rubber gloves. Following the first wave of public hysteria over Aids, the demand for rubber gloves in the US was unprecedented. In 1985, for example, when New York City schools learned they were to get their first acknowledged Aids admission, the school board ordered 50,000 pairs of rubber gloves in response to union demands.

While nobody seems to know in which closet those gloves languish (no new gloves have been ordered), the board’s response was typical. The number of occupations now regularly requiring the use of gloves is growing steadily.

Though dentists have known for a long time that they are at great risk from the hepatitis B virus, it is the fear of the Aids virus that has prompted widespread glove use. According to surveys by the American Dental Association, in 1986 only 23 percent of dentists always wore gloves, and 16 percent never wore them. By 1988, just under 80 percent always wore them and only 2.5 percent never did.

The dramatic increase in the demand for gloves caught the rubber industry off guard.

Six months ago, there was a serious shortage of surgical gloves causing delays of up to three months in filling orders.

The resulting surge in rubber prices has lured entrepreneurs into the rubber glove manufacturing business.

Gloves that cost $42 to $44 a thousand to make sell for $70 a thousand, prompting new companies to spring up in Thailand, Taiwan, China and elsewhere.

Nobody foresees an end to the demand for latex. The world glove demand, now estimated to be a trillion pieces a year, is primarily a US phenomenon. Other parts of the world, especially Europe, are expected to follow suit.

— Pacific News Service
Phoenix Rubber's results disappoint

The number of Phoenix shares in issue increased slightly to 10.7-million from 10.4-million after the bonus issue in October last year.

Recoup?

The directors say that during the interim period, the group's order intake increased dramatically. They say this was unforeseen by management, which resulted in lower margins.

They add "to serve the immediate needs of our existing customers, a policy of shortening production runs was instituted with temporary detrimental effects to profitability".

Going into the second half of the year, Phoenix has a record order book which management claims will allow the group to recoup lost margins.

But if Phoenix had difficulty handling this situation in the first half, shareholders must be wondering if they can produce adequate results for the remainder of the financial year.

This performance should do little to spark interest in the share, which has been trading in a narrow range between 35c and 75c during the past 12 months.

The share remains above net asset value, which rose marginally to 39.6c (37.1c).
Gentyre rolls to 41% increase in earnings

GENTRYRE Industries boosted earnings by 41% to a record 200c a share in the year to December (1987: 142c a share).

The final dividend has been raised to 43c (30c), lifting total distribution by 40% to 67c (48c).

Chairman Terry Rolfe said: “Given stable operating conditions, the directors expect organic growth during 1988 to yield earnings growth a share in excess of the rate of inflation.”

Turnover of the tyres and industrial rubber products company in the FSI stable rose by 17% to R38.5m (R33.7m).

Rolfe said volume increases were limited by factory capacity.

In effect, Gentyre could not fully meet strong local and export demand for its tyres.

However, the company performed better in the second half after a satisfactory 23% rise in earnings in the first half of the year. Production efficiencies and a reduction in overheads (the Johannesburg head office was closed and headquarters moved to Port Elizabeth) led to an increase in operating margins to 14% from 12%.

Operating profit rose 41% to R6.52m (R3.89m) and attributable profit was up by the same percentage to R3.18m (R2.21m).

In addition, Gentyre earned an extraordinary profit of R3.58m (R3.15m) — the profit on the sale of the properties less the cost of reorganisation.

The good results are attributable to a revamp at Gentyre which comprised rationalisation at corporate and operating level; developing both divisions organically and through carefully targeted acquisitions; and applying FSI philosophy of releasing funds tied up in property and deploying them in the purchase of high-yielding productive machinery and equipment, in stock and in debtors.

No acquisitions have yet been negotiated for the now cash-flush company.

**Lease**

The factory and branch properties were sold to a financial institution, which left Gentyre with net cash holdings of R23m at the year-end. Gentyre has the right to acquire the properties on a pre-determined basis after 10 years or extend its lease for a further 10 years.

Gentyre’s balance sheet is healthy. Its current ratio improved to 2.9:1 from 2:1.

Net asset value rose to 1075c from 915c a share. The shares are trading at around R11.50.
Higher profits for Quality

QUALITY Tyres lifted after-tax profit by 11% to R6.1m in the 12 months to February on a 14% rise in turnover to R194.4m.

Earnings rose by 33% to 25.9c (19.5c) a share and there will be a maiden interim dividend of 3c a share. This follows a special dividend of 4c a share declared when the results of the first six months' trading were announced in August.

The results announced today are not year-end results because the group has changed its financial year-end from February to August, creating an 18-month reporting period.

Executive chairman Alex Hawes said increased demand for retreads and the acquisition of Thomas Bande and Supertreads were the main reasons for the R69.9m rise in turnover. He said the group's operating margin had increased to 10.8% (9.4%), helping to compensate for a rise in the tax bill to R15.6m (R15.5m).
Japanese promise bumpy ride

The pneumatic tyre has come a long way since its Scots inventor, Robert William Thomson, first defined his device "for the purpose of lessening the power required to draw the carriages, rendering their motion easier and diminishing the noise they make when in motion."

That was in 1845. Today, the tyre forms the basis of a global industry with a turnover estimated at some US$45bn, the vast majority of which is dedicated to car and truck producers.

It is an industry which, particularly in the past two decades, has been drawn increasingly into high technology, involving both the product and its means of production. Where-as once the vehicle makers produced their car or truck, and were largely content to choose a tyre supplier on the basis of the best financial deal that could be struck, the leading tyre makers now work extremely closely with the vehicle producers from the early design stages of a car or light commercial vehicle.

That they do so is a function of several factors. Computer-aided design has allowed vehicle makers to come up with more sophisticated suspension systems to improve ride and handling characteristics. With each improvement, drivers' expectations have risen.

Since the advent of the low-profile, high-performance radial tyre of the early Seventies, it has been recognised that by altering a tyre's width, profile, aspect ratio and casing and tread materials, huge variations in performance and other characteristics are possible.

A luxury car maker, for example, will have maximum noise suppression at a high priority while retaining the best handling characteristics possible.

The maker of a 320 km/h "supercar" will require very different characteristics: a strong casing to withstand the high rotational speeds involved; a short, stiff sidewall to maximise directional stability; a huge "footprint" for the best road-holding and handling; and will give lower priority to factors like noise and even wear rates.

Another set of priorities will come to the fore in producing economy hatchbacks and where low-rolling resistance to improve fuel consumption will be important.

These technological requirements have produced a rationalisation among tyre makers. Those lacking the skills or financial resources to invest in adequate research and development find themselves confined to less valuable, low-margin "commodity" tyre business, or even squeezed out of the sector altogether.

More important factors have been at work in bringing about a concentration of the global tyre industry to the extent that some 85% of world output is in the hands of six leading producers. That compares with 13 companies sharing 80% five years ago and dozens of companies serving local markets for much of the post-war period.

First came the radial tyre to supplant the traditional crossply. Grateful customers were delighted with tyres offering double the mileage. As the radial revolution spread, tyre makers contemplated the excess capacity they had so virtually created and the commercial holes they had shot in their feet. European tyre makers were contemplating over-capacity of at least 25% by the time the second oil crisis sent vehicle markets plunging again and in spite of a string of rationalisations in the Seventies.

Eliminating the over-capacity cost tens of thousands of jobs, large plant closures and the disappearance of many small producers, usually into the hands of surviving majors.

The spectacular recovery in world vehicle markets of the past three to four years has transformed the financial situation of Western survivors. Most are making healthy profits and once again adding capacity. Profits are needed because a new and vicious twist in the competitive spiral is getting under way.

In part it takes the form of an open declaration from Bridgestone, Japan's largest tyre maker, that it intends to wrest world leadership of the industry from Western producers.

Goodyear Tire and Rubber of the US and Group Michelin of France are both claimants to the title. Goodyear has a larger turnover than Michelin, well in excess of $10bn compared with Michelin's $8bn. But about $2bn of Goodyear's turnover comes from non-tyre activities.

Bridgestone, whose tyre technology lagged far behind that of its Western counterparts as recently as the early Eighties, shook the industry last year when it outbid Gruppo Pirelli, the Italian tyres and cables concern, for Firestone Tire and Rubber of the US, for which Bridgestone paid $2.6bn.

The deal gave Bridgestone an immediate combined turnover of $6.3bn, shooting it to third in the world rankings, ahead of Continental of West Germany (which had just purchased General Tire, another US producer). Bridgestone is well advanced with a $1.5bn investment programme for significant capacity expansions in North America and Europe.

However, Bridgestone's own capacity expansions represent only one-fifth of the industry's total, and there is a lingering background worry that world vehicle markets might have come off the boil — there are tentative signs of a slowdown in Western Europe — by the time it all comes on stream.

This could once again put pressure on margins, which in the West have been rebuilt with much help from a widespread market shift to premium, high performance tyres.

This sector, pioneered by Pirelli in the early Seventies, has produced that noble situation for the tyre industry — a product where sales success depends more on the tyre's perceived performance and technical merits than on its price.

Even if the total market does decline, most leading tyre makers are in better underlying shape to deal with it than for many years.

The industry worldwide still employs more than 500,000 people, but they are survivors of a massive job-shedding which has gone hand-in-hand with tighter managerial disciplines and heavy investments in automated, flexible manufacturing.

If a market downturn does come, most expect it to show up as a brief blip against a background of long-term growth right through to the end of the century.

Robert Mereer, Goodyear's chairman, sees compound annual growth of about 3% up to the mid-Nineties. Ludovico Grandi, Pirelli's GM of tyre operations worldwide, forecasts a more conservative 1%.

Both say anyone wishing to remain a leading player in the tyre industry must develop a fully global presence just as the vehicle industry itself is globalising. Neither expects the few dozen small companies still clinging to national market bases to survive for long without specialising in small niches that don't interest the large companies.
Workers strike over ‘corporate camouflage’

Weekly Mail Reporter
A ONE-WEEK strike by some 1 200 workers at the Goodyear tyre plant in Port Elizabeth is the latest in a series of protests by workers at the way in which foreign companies are selling off their subsidiaries in South Africa.

Last month Goodyear told workers at the plant that the sell-out to a local company, Conso, a member of the Anglo Vaal group, involved a mere change in share ownership.

The National Union of Metalworkers of South Africa disagrees.

“As far as we understand it, the disinvestment, like that of many other disinvesting companies, is corporate camouflage,” Numsa organiser Gavin Hartford told the Weekly Mail.

“Licencing arrangements, most other agreements and the supply of rubber, it seems, will come from the parent company in the United States.”

The workers want separation pay of at least R5 000 for each worker, guaranteed conditions of employment, maintenance of existing labour agreements, pay-out of pension benefits and the writing off of housing loans before the sale goes through.

The National Union of Metalworkers of South Africa held two sets of talks with management over the dispute. After both deadlocked and the industrial council failed to resolve the conflict, a ballot was held which voted in favour of downsizing tools.

A company official this week told reporters: “There will be no concessions because we consider there has been no change in the position of employees because of disinvestment.”

Workers are also calling on Goodyear to set up a trust fund for community projects and want a meeting with Goodyear in the US.

The Numsa demands are much the same as those pursued by the Chemical Workers’ Industrial Union, whose members went on strike to protest at the terms of the recent Moabit disinvestment.

Both strikes reflect widespread discontent at the way in which disinvestment has taken place in South Africa. Unions argue that the sell-outs strengthen local capital, which can acquire plants at bargain prices and use the opportunity to retrench workers and alter their terms of employment. Foreign firms often continue to benefit by licensing arrangements that ensure they continue to profit from an involvement in South Africa.

One fast begins as another ends

ANOTHER Emergency detention has launched a hunger strike — a week after six hunger strikers were released from detention.

Yesterday Daveyton Students Congress member Aubrey Nxumalo, 23, started refusing food in protest against his detention under the Emergency regulations.

Last Thursday six Soweto students — Paul Chuke, Solly Dolamo, Norman Mabhuku, Blessing Ndlovu, Joel Leslape and Morgan Rabouche — were all released without restrictions after a protest fast in Bloemfontein’s Grootevlei Prison.

Nxumalo, a part-time student, was detained for the second time on May 23 this year. He was detained under the Emergency regulations for two years between 1986 and 1988.

Asked for comment, the prisons department referred the Weekly Mail to the police. A police representative in Pretoria said in terms of the Emergency regulations he could not comment.

The UDF/Cosatu peace initiative in Natal will come under scrutiny at the congress.

“We will examine the role of the state in the violence and the need for an independent commission of enquiry into the police in Natal,” said Naidoo.

Other crucial items will be the need to build unity between the country’s main trade union grouping; the need for the creation of a broad anti-apartheid coalition; solidarity with Namibian Workers during the run-up to independence elections; and a review of the federation’s stance on sanctions and disinvestment.
JOHANNESBURG. — The National Union of Metalworkers of SA (Numsa) have submitted a revised proposals to Goodyear management in Port Elizabeth in an attempt to resolve the disinvestment dispute, Numsa organiser Gavin Hartford said yesterday.

But he did not disclose details of the proposals which, he said, were given to management at a meeting yesterday.

Numsa is due to respond to car manufacturer's revised pay offer when industry-wide negotiations resume in Port Elizabeth today.
Goodyear workers get cash bonanza

Own Correspondent

JOHANNESBURG. — Goodyear employees have won a cash bonanza which could average R6 000 each, and the company has also agreed to write off, over five years, housing loans to employees worth R3 000 to R5 000.

The deal arises from the settlement, announced yesterday, of the 11-week-old strike by 1 200 Numsa members over the terms of disinvestment of Goodyear’s former US parent.

It also includes guarantees on employment conditions, jobs and union contracts, and effectively nullifies the dismissals during the strike.

The agreement provides that employees should return to work by Monday, although a number began streaming back to the Uitenhage factory yesterday.

According to Numsa, the cash payments are to be paid out through the company pension fund.

Each employee is to receive a one-off R1 000 payment as “compensation”. Goodyear said it was to pay this money into the fund.

In addition, employees will be entitled to withdraw double their own contributions plus interest back to the date of their last entry into the fund. Numsa national organiser Mr Gavin Hartford said this would average R4 500 to R5 500 per person.

Goodyear disinvestment was thinly disguised “corporate camouflage”, Numsa said yesterday.

Lambasting the company and other large corporations, the union said in a statement that multinationals disinvesting from SA had tried to portray themselves as allies of the anti-apartheid struggle.

Numsa’s experience with Goodyear had, however, revealed that this was not true.
JUDGING by its fine track record, Darmag, which is listed in the JSE electronics sector, should be generating buying interest among investors. But the group has been surprisingly out of favour, and dropped to a new low last week of 85c.

Darmag specialises in the manufacture of rubber and plastic products for a wide range of industrial applications. The group proudly displays its six-year track record in the latest annual report covering the 12-month period to end-February 1989.

Turnover has risen to R33,8m in the latest year compared with only R28m during 1984. Pre-tax profit advanced strongly during this period to R3,4m from R538,000.

Earnings a share began to accelerate quite sharply during the past three years. In 1987, EPS rose to 7.6c compared to 1.6c the previous year. Darmag then continued to show satisfactory growth with earnings of 11.9c during 1988 and 13.2c for the latest financial year.

Therefore, given the group’s impressive bottom line performance, one would expect a better JSE performance than shown on the accompanying chart. This is especially so given Darmag’s fine reception by investors when it originally came to the market in August 1987, just prior to the October crash.

At that time, the group made available 25-million shares, of which 27-million were offered to the public at 100c. The share price found good support at the 140c level from the time it was listed until the October crash.

For most of 1989, the share traded around the original 100c offer price, but bearish sentiment has again dominated Darmag’s price action recently, resulting in last week’s record low. The fact that Darmag failed to hold above its 200-day moving average confirms the bearish trend.

The JSE listings department confirms that Darmag has not yet reported its interim results covering the six months ended August 1989. This could help explain why investors have suddenly become nervous of the share.

But a company spokesman says that these results have been finalised, and Darmag should release its interim figures this week.

Darmag’s basic operations appear to offer good growth potential. Capacity within its plastics division improved by more than 30% during financial 1989. This places Darmag in a good position to capitalise on the swing away from rubber to plastic products in the battery industry.

The group’s plastics division was relocated last year to modern facilities in Fort Jackson, Ciskei. Despite the costs incurred in the move, this was offset by the improvements in productivity and product quality. In addition, the move helped to reduce Darmag’s tax rate.

Although Darmag may be affected by the current economic slowdown, it should show a satisfactory performance judging by the six-year track record. But this is difficult to assess until the interim results become public knowledge.

However, with Darmag being involved in the mining industry, this should help the group in the future, given the improved outlook for the gold price. Assuming Darmag had a reasonable interim period, the recent spate of selling may be presenting investors with a buying opportunity.
Irregularities at Quality revealed

By Sven Lünsche

Following the discovery of major irregularities at Quality Tyres, majority shareholder Malbak has mounted a rescue operation to salvage the company and soften the impact on its creditors.

In terms of the deal, Malbak would lift its shareholding in Quality from 41 to 75 percent and offer the group's bankers and major creditors, mainly tyre companies, to convert half of their combined debt of R78 million.

Malbak in turn would waive its damages claim of some R15 million against Quality and would not rescind the original 1988 merger deal.

A number of major creditors, including Standard Bank, have already indicated their acceptance of the proposal.

All small creditors will be paid in full, Malbak added.

The irregularities relate to borrowings, which were unauthorised by Malbak, and raised Quality's debt from the R15 million shown in the accounts for the year to end-August 1989 to R50 million.

If the rescue package is acceptable to creditors and bankers, Malbak would undertake to manage the company.

Announcing the package, Malbak executive director Tom Chalmers said the alternative was for Malbak to withdraw its assets from Quality Tyres, as the accounts on which the original merger between Quality and Malbak Motors Holdings' tyre division was based were materially incorrect, and for Quality to be liquidated.

In that case, it was estimated that creditors would receive only 28c in the rand after two years.

"When the first indication of irregularities came to light during the 1989 audit, the Quality Tyres board immediately initiated the suspension of the Quality listing and started a full-scale investigation, which is still underway."

Ed Phillip, the financial director, has left the company and the Quality board has appointed Ray Joiner from Malbak in his place. If the Malbak offer is accepted, Mr Chalmers, who is the chairman of Malbak Motor Holdings, will assume responsibility for Quality Tyres.
Quality Tyres punctured

By Ann Crotty
It looks as though Quality Tyres is set for liquidation.

Last night Malbak announced that its bid to save Quality, in which it has a 40.7 percent holding, had failed because some major creditors were unwilling to accept the rescue package.

Quality was threatened with insolvency as a result of irregularities which had the effect of increasing its debt from the R15 million shown in the management accounts for the year to end-August 1989 to R20 million.

The rescue package involved capitalising the debt and increasing Malbak’s stake in Quality to 75 percent. It required the agreement of Quality’s bankers and its major creditors to the conversion (to equity) of half of the unsecured amount of R76 million owing to them.

The package would have meant the major creditors would be repaid half of the money owing to them. Malbak undertook to repay all small creditors in full.

Under liquidation it is estimated by Malbak that creditors will receive about 26c in the rand after two years — worth 20c in present value terms.

But last night, Malbak group finance director, Peter Beningfield, said: “Curtain of the major creditors have either rejected or not responded to the offer. Regrettably, we are unable to reach a compromise to save the company from liquidation, and Malbak is therefore withdrawing its offer.”

It remains to be seen whether Malbak has sufficient grounds to rescind the 1988 merger between its own tyre interests and those of Quality. It is attempting to do this on the grounds that the February 1989 financial statements were fraudulent and that the merger was based on management accounts which were materially incorrect.

Malbak will be joining the list of creditors to pursue its own claim of R15 million against Quality.
Rescue bid fails for Quality Tyres

MALBAR's bid to rescue Quality Tyres from insolvency failed yesterday with some of Quality's creditors not accepting its offer.

Quality, the second largest tyre dealership in the country, is now expected to be liquidated. Its board will hold a meeting today to decide what action to take for the future.

Malbak group financial director Peter Beningfield said certain major creditors, either rejected or did not respond to Malbak's offer.

"Regrettably, we are unable to reach a compromise to save the company from liquidation, and Malbak is therefore withdrawing its offer to creditors."

Malbak will seek to withdraw its assets from Quality on the grounds that the February 1988 financial statements were fraudulent and that the merger between its own tyre interests and those of Quality Tyres was based on accounts which were materially incorrect.

Quality's published results for the year to February 1988 show a 55% rise in attributable earnings to R25m.

Asked if any charges would be laid, Beningfield said it would be up to the liquidators to do so if they saw fit.

Malbak will also pursue its own claim of about R10m against the company.

Malbak had proposed that Quality's bankers and major creditors convert half of the combined R70m debt into equity and transfer a portion of the ensuing equity to Malbak, thereby raising Malbak's stake from 40.7% to 75%. Minor creditors would be paid out in full.

In a statement on Tuesday, Malbak said the alternative would be for Quality to be liquidated.

With the merger in 1988 Malbak acquired a 28% stake in Quality. This was increased to 40.7% in July this year.

While it had neither equity nor management control of Quality, its representatives on the board insisted on the introduction of improved controls and reporting systems.

The first indication of irregularities came to light with the 1987 audit. The company's listing was immediately suspended and an investigation initiated.

According to Malbak, these irregularities related to borrowings which were unauthorised by Quality's board and which effectively increased its debt from R15m shown in the accounts for the year to August 1986 to R80m.

According to Beningfield, Quality chairman Alex Hawes was on a week's leave. His wife said last night that he had no comment.
Orders against estates of Quality Tyres directors

THE estates of Quality Tyres directors Alex Hawes and Edward Philip, charged with fraud last week after investigations into the company’s affairs showed undisclosed borrowings from banks totalling R5.6m, have been provisionally sequestrated in the Rand Supreme Court.

Philip’s estate was provisionally sequestrated by Mr Justice Leveson yesterday. An order against Hawes was granted on Monday.

The sequestration orders were obtained by intervening creditor Central Merchant Bank Ltd (Senbank) after initial applications were brought by the provisional liquidators of Quality Tyres Ltd and Quality Tyres (1970) (Pty) Ltd.

Both companies were provisionally wound up on December 8. Senbank has a R6m claim against both Hawes and Philip.

Papers before the court yesterday said Philip, Hawes and fellow director Basil Bruce O’Eshley borrowed R6m from Senbank to buy shares in Quality Tyres Ltd.

Hawes is a director of both companies. Philip was a director of both until he resigned his Quality Tyres Ltd directorship in October. Quality Tyres provisional liquidator Michael de Villiers said in an affidavit that Hawes and Philip acted together in “massive frauds” perpetrated by the two companies.

Borrowed

“These frauds involved inter alia vast sums of money being borrowed from a number of commercial banks on behalf of each of the companies,” he said.

He said a total of R56.6m had been borrowed from various banks.

“The far greater proportion of the monies borrowed was not reflected or recorded in the companies’ books and records, nor did they receive any payment,” said De Villiers.

He added that the net asset value of both Quality Tyres companies was nil.

Senbank’s MD Douglas Anderson and senior GM Jurie Bester said in an affidavit that when Philip furnished the bank with a statement of his assets and liabilities as at June 26 this year, he had placed a substantial value on his shares in Quality Tyres Ltd.

It was apparent from the allegations in the affidavit put forward by Quality Tyres, they said, that the shares had no value.

Anderson and Bester said Philip had assets of R1 056 000 against liabilities of R6 231 571.

They added that Senbank’s security for the R6m owed by Philip was the valueless shares he pledged to the bank as well as suretyship given by Hawes and O’Eshley.

A trustee should be appointed as a matter of urgency to investigate the whereabouts of the vast amounts unaccounted for, they said.

The return date for both provisional sequestrations is February 20.
Following the provisional liquidation of Quality Tyres and its main operating subsidiary, Quality Tyres (Pty), an offer by Malbakh to buy the business assets has been accepted by creditors.

Malbakh has undertaken to pay the liquidators an amount ensuring that concurrent creditors receive a dividend of 31c in the rand in respect of their claims against Quality Tyres (Pty).

In return, Malbakh has taken over the stocks, debtors, fixed assets and business names of the company with effect from liquidation date (December 8, 1989). Nineteen of the 20 creditors represented at an informal creditors meeting last week voted to accept the offer.

Malbakh executive director Tom Chalmers said that the tyre business would operate as a division of Malbakh Trading, which also houses Malbakh's motor and agri-cultural equipment interests, and would continue to trade under as Quality Tyres.

"We are very pleased with the support we have received from the tyre companies and look forward to working with them to consolidate Quality's position in the market place.

"The staff at Quality can now put the worries of the past few weeks behind them and concentrate on increasing market share under the Malbakh umbrella," Mr Chalmers said.
MANUFACTURING — RUBBER PRODUCTS

1990
Tycon, Tredcor merge to form SA’s biggest tyre force

Tyre manufacturer Tycon, formerly Goodyear Tyres, and tyre distributor Tredcor have merged to create the biggest tyre force in SA with an expected turnover of R1bn a year.

Tredcor was previously held by JSE-listed companies Trench and Longmire, while full control of Goodyear was acquired by Consol when its US parent disinvested from SA in July last year.

Consol will now hold 61% of the merged company, while Trench will have 21% and Longmire 18%.

Through its Mastertreads and Trench tyre outlets, Tredcor is one of SA’s leading distributors of locally-made, imported and retreaded tyres.

Its head office is in Cape Town, but it has operations throughout SA.

Tycon, with its head office in Port Elizabeth, manufactures tyres for passenger cars, trucks, tractors and earthmovers under the Goodyear label.

Its other products include conveyor belts, PVC food packaging and other films.

Consol group MD Piet Neethling says both Goodyear and Tredcor have the largest share of the SA market in their respective fields.

Range

He says the merger, effective from January 1 this year, is expected to result in many synergies for both companies and in improved marketing and service to clients.

Tredcor will carry a full range of tyres, not just the Goodyear range.

As Goodyear Tyres in the US has given its formal approval to the deal, there will be no changes in the technical agreement it has with Consol.

The merger will not affect the present day operations of Tycon or Tredcor which will continue to trade independently.

As Consol has become the controlling and managing shareholder, the respective MDs will report to Neethling.

He says while a listing is not on the cards at the moment, provision has been made for one in the agreements between the companies.

The deal consists of a complex set of transactions with a small amount of cash changing hands, details of which will be posted to shareholders.

The effect on the earnings and net asset value of Consol, Trench and Longmire cannot be determined until their results for the six months ended December 1989 are published.
Tycoon deal a challenge to the tyre industry

24/11/90

It looks like a great deal for Consol and its tyre subsidiary, Tycoon (formerly Goodyear), but the tie-up between Tycoon and Tredec could prove to be an even greater deal for Tredec and Longmile.

If a major manufacturer is going to integrate forward into the distribution sector of the industry, it makes sense to link up with the largest player.

Even when Quality Tyres was at its strongest, it apparently ran only a distant second to Tredec in tyre distribution.

In exchange for a 50 percent stake in SA's largest distribution and re-treading company, Tredec and Longmile have each picked up a significant stake in what overnight has become the largest player in the industry, with activities embracing manufacturing, distribution and re-treading. The asset base is huge.

If either Tredec or Longmile has a pre-emptive right on the shares of the other, the deal could prove to be even more attractive.

Such a pre-emptive right could see Tredec at some stage sitting with 35 percent of what is currently the largest player in the tyre industry.

None of the financial details have been disclosed, but analysts agree it could involve a significant allowance for Tredec goodwill.

The official announcement says: "The effect of the merger on the earnings and net asset values of Consol, Tredec and Longmile respectively cannot be determined until after the publication of interim results of those companies to December 31,1990." For the 12 months to June 1989, Goodyear earned R38 million. In the year to December 1988, group turnover was R410,8 million.

There is a dearth of public information on unlisted Tredec. But, based on Quality Tyres information, annual turnover could exceed R300 million.

Given that Tredec is involved in distribution, which is far less capital-intensive than manufacturing, it looks as though Tredec and Longmile will be trading in their stake in a margin-oriented Tredec for a stake in a company with a much richer asset base.

It seems certain that the other three manufacturers (Firestone, Dunlop and Gentyre) would like to have pulled off this deal.

To some extent Firestone may feel comfortable enough being in the Sanlam stable, which also houses Quality Tyres. But right now Dunlop and Gentyre are looking a little bit left out, despite protestations by Tredec and Tycoen that the operations will continue to trade independently.

The prospect of a tie-up of distribution outlets is unlikely to cause too many sleepless nights at either Dunlop or Gentyre, in view of the current excess demand for tyres and the belief that this situation is unlikely to alter materially within the next two years.

So if the Tycoon and Tredec merger beds down without too many difficulties, Gentyre and/or Dunlop may be tempted, over the next two years, to consolidate the various regional tyre distributors and re-treaders into a force worth noting with.

BROADER TREAD

After acquiring Goodyear SA with effect from July 1 last year, Consol has moved swiftly to strengthen its position in the tyre industry. It is effectively giving up 39% of Tycon (formerly Goodyear) and acquiring the controlling stake in a new company which will have a dominant share of the tyre distribution market.

From January 1, 1990, Tycon is to be merged with Tredcor, now held 50:50 by Tredcor and Longmile. Tycon/Tredcor will be held 61% by Consol, 21% by Tredcor and 18% by Longmile.

No financial figures are being revealed until after interim results for the end-December period of the listed companies concerned have been published, but Consol MD Piet Neethling confirms that the merged group's annual turnover will exceed R1bn. Tredcor last year derived 30.1% of its R77.7m pre-tax profits from motor trade and tyres.

Neethling says there will be no significant financial impact for Consol in the short term. The move is primarily a strategic investment to enhance Tycon's security in the tyre market. Only one of SA's tyre manufacturers now owns a stake in a major distributor. Firestone has Superquick, which has franchising operations. Firestones is linked with Federale Volksbeleggings, while Malbak — also in the Sankorp camp — has Quality Tyres.

The new company will have more than 150 tyre retreading and selling outlets and about 30% of the market.
THE merger of Tycon (formerly Goodyear) and Tredcor has given birth to a giant in tyre manufacture and retailing.

The pooling of Tycon's tyre-making facilities and Tredcor's Masterblend and Tredlyre outlets, which sell SA, imported and reconditioned tyres, will lift turnover of the combined group to more than R1-billion a year.

Consol, an Anglovaal subsidiary, which bought Goodyear from the American parent in July last year, will hold 61% of the combined company, Tredcor and Longmile, which each has 29% of Tredcor, will hold 21% and 18% respectively.

The deal raised eyebrows in the market with suggestions that Tredcor and Anglovaal might move closer together. But Tredcor chairman Neil Jowell says there are no plans to strengthen links with the acquisitive Anglovaal group, although he has high regard for the company.

Consol's purchase of Tycon was done at a bargain price of R176-million and at a price/earnings ratio of less than five. In the six months to June Tycon reported operating profits of R46-million on turnover of R208-million. Assets are estimated at R500-million.

**Strike**

Although the company was acquired in July, there is unlikely to be any financial benefit for Consol in the half-year to December, says managing director Piet Neethling.

A three-month strike and other industrial unrest as well as the closure over Christmas affected Tycon's profitability. In addition, Consol had to raise R59-million through a preference-share issue to complete the purchase, and this has to be serviced.

Mr Neethling says the influences on Consol earnings will not be large in the short term. He describes the deal as being strategic — linking the largest manufacturer and retailer of tyres.

Rationalisation will benefit all three companies.

Goodyear is the largest of SA's four tyre-makers with a market share of nearly 30%. Tredcor is by far the largest tyre retailer with about 150 outlets.

Although there are no plans for listing the merged group, it is provided for in the agreement.
Consol increases profits by 43% to R87,5m

JOHANNESBURG. — Consol Limited, the packaging, tyre and rubber subsidiary of Anglovaal, increased operating profit by 43% to R87,5m (R61,1m) in the half year ending December 31, 1989.

Financing costs were high and profit after tax increased by 28% to R39,3m (R32,2m) and, after allowing for the preference dividend, earnings per share increased by 12% to R36m and 56,3c respectively (50,4c) per share.

Turnover increased by 61% to R631,7m (R392,8m), mainly as a result of the acquisition of Tycon, formerly the Goodyear Tyre and Rubber Company with effect from July 1, 1989.

Operating profit was adversely affected as sales volumes in most of the group's packaging markets either remained static or declined marginally and an 11-week strike and a two-week go-slow occurred at Tycon, which originated from union demands related to the American disinvestment from the company.

Interest earned previously on surplus cash declined as it was used, together with the proceeds of the issue of R50m preference shares, for the purchase of Tycon and financing costs were high during the half year because of increased borrowings required to finance the installation of a new furnace at the Clayville Glass Factory.

The effective tax rate was 48,8%, slightly higher than the 48,5% for the same period last year and the 47,8% for the 13 months to June 1988.

Profit growth was recorded by the glass division despite sales being affected by generally weak demand and start-up costs related to the new glass furnace at Clayville.

Rigid plastics showed a marginal profit improvement in a soft market. Losses in flexible plastics increased because of high competition in a weak market for industrial flexibles and bags and sacks. The sale of the industrial flexibles operation becomes effective on March 1, 1990.

The paper division, with its corrugated investments, achieved meaningful profit growth in spite of a small decline in its market and a loss of market share to a new entrant in the Western Cape.

In spite of the disruptive effect of industrial action which adversely affected sales and output at Tycon a small operating profit was achieved. — Sapa
Wayne Rubber restructuring benefits are still to come

The reorganisation of Conshu’s reformed subsidiary Wayne Rubber is still taking place and earnings and dividends reflected in the interim results to December have been maintained at last year’s level.

Financial director Charles Rapp warns that the positive impact of the reorganisation is unlikely to materialise until the last quarter of the financial year and benefits will only materialise in the new year.

In May, Conshu and Phoenix announced the merger of Conshu’s Wayne division with Phoenix. Wayne was reverse listed into Phoenix and the new entity was renamed Wayne Rubber. The restructuring makes a comparison of this year’s results with the previous interim almost meaningless.

Charlotte Mathews

The turnover of the new group is R37.6m, six times as large as the original Phoenix’s R5.8m last year. Operating income of R4.0m, however, is only five times the R948 000 of the old company, showing the restructuring costs. Earnings were maintained at the same level as the previous year’s 4.5c a share and the dividend was unchanged at 1.5c a share. The number of shares in issue has increased sixfold.
Margin boost

A steep drop in the effective tax rate worked wonders for BTR/Dunlop's bottom line in the year to end-December. It enabled the already good trading profit to be translated into an EPS advance of 88% to 310c and the dividend could thus be lifted by a third on a 2.2 (1.6) times cover.

The reason given for the drop in the tax rate to 32% (46%) was the allowances appli-
Gentyre results reflect signs of Quality debacle

By Ann Crotty

First signs of the damage the Quality Tyres debacle has wreaked on the tyre industry come in the form of a significant knock in operating income at Gentyre after the write-off of its share of the Quality Tyres bad debt.

But interest income and a drop in the tax charge enabled the group to report a 40 per cent hike in earnings.

On a 16 per cent increase in turnover to R1422.2 million (R338.5 million), it only managed a 13 per cent improvement in operating profit to R65.3 million (R56.2 million).

This means full-year margins were down from 14.6 per cent to 13.9 per cent. Management does not specify the extent of the write-off relating to Quality Tyres, saying only: “The bad debt arising from the debacle at Quality Tyres, a major customer, has been fully provided for. Margins, but for this write-off, would have exceeded the 14.6 per cent achieved in 1988.”

This suggests that the write-off could have been in the region of R4 million, probably representing two to three months of purchases by Quality, with an allowance made for whatever is recoverable from the liquidators.

Operating profit in the second half was R38.2 million, compared with first-half profit of R27.2 million and second-half financial ‘88 operating income of R29.9 million.

The good news is that, stripping out the Quality impact (and assuming that all of the write-off was taken off second-half profits), the operating performance in the second half looks as though it continued the strong improvement evident at the halfway stage when margins were up from 11.1 per cent to 12.3 per cent.

The group received interest income of R3.3 million, compared with an interest payment of R2.5 million in financial ‘88.

The turnaround reflects the benefits of last year’s R70 million sale of properties. Part of the proceeds have been used to fund capacity expansion in the tyre division. Pre-tax profit was up 24 per cent to R65.5 million (R53.5 million).

The tax charge was down from 41.8 per cent to 34.4 per cent, leaving attributable profit showing a 40 per cent advance to R45.8 million (R31.4 million), equivalent to 230c (250c) a share.

A final dividend of 61c (45c) a share has been declared, bringing the total payout to 96c (67c) a share.

The lower tax charge is attributable to a number of factors: tax allowances on the new plant; tax benefits from tyre exports and, probably most significantly, the structural changes that have been undertaken.

The latter involved the creation of a holding company, Gentyre Industries, with two wholly owned subsidiaries: the tyre division and the industrial products division.

Whatever the operational benefits of this restructuring, it is likely to have resulted in some tax benefits.

“Given the stable operating conditions, we expect that organic growth will yield growth in earnings per share for 1990 in excess of the rate of inflation,” the directors say.
Centrize — 40% more earnings on 16% turnover rise

COMPANIES
New team appointed for Quality Tyres

MALBAK Trading has appointed a new management team for its Quality Tyres division, according to a company statement yesterday.

John Myers, previously at Malbak head office, is MD while financial director is Ray Joiner, previously financial director of Wiggins Teape.

Bruce O’Eliot and Terry Chapman, both of Quality Tyres, are marketing director and technical director respectively.

Joiner said sales in the central Transvaal had fallen over Christmas, partly as a result of having no stock.

"We are reviewing each branch and factory to see if they are profitable and are generally cutting expenditure."

Quality Tyres Limited and its operating subsidiary Quality Tyres were placed in final liquidation in January.

The assets of both companies, including the business as a going concern, were bought by Malbak, who offered ordinary creditors $1c in the rand.

Quality Tyres is currently suspended from the JSE.
Consol retreaded for renewed drive

JSE heavyweight Consol will announce interim results on Wednesday after a hectic half-year in which the group captured more than its share of the headlines.

First, it acquired Good-year Tyre & Rubber from disinvesting US parent for R1.76-billion.

Then it went into a promising merger of the rubber and tyre operations with Tredcor, giving it control of one of SA's largest tyre retreading and distribution operations. The combined group will have turnover of about R1-billion a year.

Finally, Consol Plastics has concluded the sale of most of its flexible packaging and industrial products interests to Murray & Roberts Plastics and Plastall.

By Ian Smith

The tyre and rubber group's contribution to first-half earnings were hit by a prolonged strike over the disinvestment, go-slow working and the Christmas shutdown.

Lethargy

Consol managing director Piet Neethling says the results will not be great -- by the group's standards.

"We have been hit by the lethargy of the economy. Packaging markets certainly aren't booming and growth has stopped in some sectors.

"Fortunately, the strike is out of the system, and production at Tycon returned to normal late last year and in January."

The foundations are in place for a return to the performance expected by the market.

The tyre and rubber acquisition has changed the nature of Consol considerably, but the diversification does not imply any lesser commitment to its traditional packaging interests, says Mr Neethling - "it opens up new avenues for us to grow in another sector."

Tycon and Tredcor have established and motivated managements in place, and they will have the traditional autonomy in day-to-day operations enjoyed by the older Consol operations.

Mr Neethling says: "I am confident about the way everything has worked out."

Consol's three legs in packaging are soundly based in plastics, paper and plastics. With the packaging industry controlled by Nampak, Kolker and Consol, opportunities to grow by acquisition were severely limited, but Consol began to accumulate cash.

Anglovaal, which holds a 55.4% stake in Consol, went along with the group's plans to move into a new area. When Good-year looked for a buyer of the SA operation, Anglovaal chairman Basil Herro's long tenure on the Good-year SA board paid dividends.

Independent

Soon after the deal was signed long and complicated negotiations began with Tredcor and Longmille, which jointly controlled Tredcor.

The final deal gave Consol 61.5% of the merged Tycon-Tredcor operations. Tredcor holds 21% and Longmille holds 18%.

Consol top management has had its hands full in the last few months with the big deals, and the first move must be to get closer to both Tycon and Tredcor and begin to understand the sectors in which they operate, says Mr Neethling.

Tycon and Tredcor will continue to operate independently under existing management, but the merger creates a "unique force" in the tyre industry which serves the entire new and retread market.

This should lead to advantages in marketing and improved service to customers, benefiting shareholders and the motor industry, says Mr Neethling.

The sale of plastics operations is not connected to the expansion in the new field. They came mostly into Consol during the group's diversification in packaging and allied products a few years ago.

"Now we are in a consolidation phase in packaging and investments are being carefully measured against their returns."

"We tried long and hard enough to bring the low performers up to our standards. There may be more synergy with the buyers' operations."
BTR-Dunlop's 88% rise in earnings keeps it rolling

Companies
Dunlop's earnings increase
The success achieved with its productivity and efficiency programmes pushed up BTR Dunlop's earnings by 88 percent for the year ended December.

Figures released on Tuesday show that trading profit recorded a 50 percent increase to R110.9 million (R74.1 million), after a rise in sales of 19 percent to R631.8 million (R529.3 million).

Attributable profit was accordingly higher at R72.5 million against R38.2 million in 1988. Earnings a share showed a corresponding sharp rise to 310c from 165c.

A final dividend of 90c was declared making a total of 140c for financial 1989, up 33 percent from 105c in 1988.

Last year Dunlop announced a capital expenditure programme of R110 million over three years to meet the continued swing to radial steel tyres.

BTR last year reorganised its tyre business through a transfer of the operation to Dunlop Type, while the manufacture of industrial products was also rationalised in an effort to increase productivity.

Tax payments rose slightly to R34.4 million (R32.2 million) but the effective tax rate was lower as a result of allowances applicable to the capital expenditure programme.

The group also adopted the partial method of providing for deferred taxation.

On prospect, the directors state that trading conditions will be more difficult in 1990, but say that the group should be able to maintain its growth in line with the economy.
Trencor-Mobile’s profits improve

Financial Staff

Trencor reported a satisfactory increase in earnings for the six months to December, as the general slowdown in the domestic economy was offset by the stronger than expected performance of trading operations and foreign activities.

Financial results show that attributable income increased significantly from R17.5 million to R20.5 million.

This translates into earnings a share of 207c against 122.9c previously, while an interim dividend of 30c (20c) was declared.

Mobile Industries’ attributable income increased to R14.8 million (R8.7 million) and earnings a share showed a corresponding increase to 51.8c (30.5c). A dividend of 7c (4.7c) was declared.

Combined turnover of the group rose from R334 million to R355.8 million.

The directors expect earnings in the second six months to improve, over those of the first half.
Gentyre boosts profits by 40%

By ARI JACOBSON

GENTYRE INDUSTRIES boosted profits attributable to ordinary shareholders by 40% to R43.6m (R31.1m) for the year to December, aided by higher turnover and improved margins.

This translated into record earnings a share of 260c, up 40%.

The final dividend has been increased to 61c (43c) a share making it a three-times-cover of 83c (67c) for the year.

Chairman Terry Rolfe said bad debts arising from the debacle at Quality Tyre, had been fully provided for.

"With turnover up 16% at R452m, margins would have supported this trend in excess of 14.5% — but for this write-off."

On prospects for the year, Rolfe said "capacity constraints at the tyre factory are being addressed in the ongoing capital expansion programme with funding being generated from internal cash flows."
Longtime operating profits climb

Charlotte Matthews
Gentyre report was incorrect

CHARLOTTE MATHEWS, A REPORT on Gentyre’s results for the year to December, published in Business Day yesterday, said an extraordinary item of R1m shown below the line was the loss on customer Quality Tyre. Gentyre has pointed out that the loss was considerably higher than R1m and it has all been accounted for above the line. The figure of R1m refers to various small items. The error is regretted.
Tiger Wheels roars defiance at slowdown

TIGER Wheels, the tyre and wheel manufacturer, retailer and wholesaler, withstood the slowdown in the economy in the six months to end-December, increasing attributable earnings by 36% to R1,7m (R1,2m).

An increase in the weighted average number of shares in issue saw earnings per share grow by a lower 25% to 6,1c (4,9c).

This growth was achieved on a turnover rise of 23% to R25,4m (R20,6m).

Chairman and CE Eddie Keisan says the results reflect Tiger Wheels's ability to grow during downturns in the motor industry.

"These results have been achieved notwithstanding extra development expenditure incurred in both the manufacturing and retail operations in order to provide an infrastructure for further expansion," he says.

"The continued policy of tight asset management and conservative borrowing should allow the group to sustain these kind of growth levels without incurring a major interest burden. Unutilised term funding facilities are available should exceptional growth opportunities present themselves."

The group has a low gearing of 27% and cash of R1,1m.
BTR Dunlop marks 1990 as consolidation year

In the year to December Dunlop translated a 19% improvement in sales to R631,6m from R529,3m in the previous year into a 39% gain in attributable profits to R72,5m (R55,2m).

MD Clive Hooper said the increased profits stemmed from productivity and efficiency programmes combined with higher sales volumes. A new range of steel-belted car tyres, the Dunlop SP23, was launched in August and the tyre business was re-organised and transferred to wholly owned subsidiary Dunlop Tyres. This, with the rationalisation of industrial products manufacturing, contributed to the company's good performance.

Capital expenditure was necessary to buy new equipment to handle the swing towards radial steel tyres.

In the industrial products division, demand for mining and industrial products had been static, but that of automotive products had increased. Emphasis in 1990 would be placed on securing a share of the additional automotive business which would become available as a result of the phase VI programme.
Rubber import duty to be reviewed

THE 28% import duty on raw rubber is to be reviewed, Board of Trade and Industry chairman Lawrence McCrystal said yesterday.

Meanwhile, users of synthetic rubber or isoprene will be faced with a price increase within the next two weeks from manufacturer Sentrachem, which decided to mothball the loss-making isoprene plant last week.

The import duty review follows Sentrachem's shutdown decision.

The plant was mothballed as there was little chance rubber prices would bounce back to previous highs in three to four years.

Sentrachem CE Johan van der Walt said yesterday the increase would allow Sentrachem to maintain a positive margin during the shutdown period.

SA tyre manufacturers account for 65% of isoprene usage.

Tyre Manufacturer's Association director Michael Waterson said if protection granted to the local synthetic rubber industry fell away, tyre manufacturers would be able to import natural rubber at lowered cost.

BTR Dunlop MD Clive Hooper said a major reason for the low international rubber price was the international levelling off of demand in the motor and tyre industries.

Waterson said tyre manufacturers had been under pressure to use the locally produced isoprene and thus had put much development into acquiring manufacturing methods necessary to use isoprene instead of natural rubber.

Hooper said it would take about six months and much expense to change certain plants back to natural rubber usage.

Van der Walt said the 8% increase would take effect on April 1.

The increase was agreed upon in consultation with Sentrachem's customers, he said.

Hunts subsidiaries help to raise group profits by 25%

COMPANIES
Merger spells growth for Consol

THE merger between tyre manufacturer Tycon — formerly Goodyear Tyres — and tyre distributor Tredcor would have decreased Consol's earnings to 139.3c from 143.3c had it been in effect for the year to June 1989.

The merger of the two, effective from January 1, saw the creation of the biggest tyre force in SA with an expected turnover of R1bn annually.

Consol holds 61% of the new company, to be named Contrex, while Tredcor and Longmille — which previously held Tredcor — hold 21% and 18%, respectively. Consol acquired full control of Goodyear when its US parent disinvested from SA in July last year.

Announcing details of the financial effects of the venture today, UAL merchant bankers say improved growth in Consol's earnings a share is expected to result from the combined venture in the longer term.

UAL says goodwill of about R35m has arisen on the Tycon acquisition, and the combined venture will effectively increase this to about R110m. Consol directors say the goodwill is "fair and reasonable".

If the goodwill attributable to the combined venture was offset against the net asset value of Consol, the venture would have reduced the net tangible asset value per Consol ordinary share as at end-December by 5% to 248c.

Consol posted earnings 12% up at 56.3c (50.4c) a share in the six months to December on turnover which grew 61% to R631.7m due to the Tycon acquisition.

Viewed against the strong earnings growth of the past two years, management's continued pre-occupation with protection for the local tyre industry may seem a little incongruous.

In his review, MD Clive Hooper again notes the limited increase in sales achieved by local tyre manufacturers in contrast to the "significant growth" of imports and the continued delays in considering the industry's application two years ago for a higher formula duty.

Not mentioned, however, is the fact that BTR Dunlop's motor division remains the most profitable sector of the group in terms of trading margin on sales — a situation probably helped by the progressive move to hi-tech product lines. This would account for the 17% gain in trading profit achieved by the division last year on a sales increase of over 11%.

But while there is little evidence, on the face of it, that the group is suffering unduly from effects of imports, some might suggest that the group's strong performance in recent years has, as much as

BTR's Hooper ... growth in tyre imports

anything, stemmed from restoration of normal profitability after the protracted earnings slide of the early Eighties.

For Dunlop, this started well before the merger with BTR in 1986. Its earnings peaked at 135c in 1982 and had fallen to 100c by the time the financially weaker BTR was absorbed. The initial results of the enlarged group were disappointing, to say the least, with 1986 EPS down to 87c to give a cumulative decline of over 35%. This was matched by the collapse of profitability ratios — the trading margin that year was only 10%, the pre-interest return on capital 16% and return on equity 14.5%.

1987 was not much better and it was really only in 1988 that the recovery started to make itself felt. This continued through to the latest set of results to yield an almost three-fold increase in EPS over the two years. At the same time, the trading margin recovered to 17.6%, with corresponding increases in the pre-interest return to almost 28% and in ROE to 27.3%.

The above is relevant to any assessment of prospects as, with a high level of profitability restored, it is obvious future earnings are not going to benefit, as they have done over the past two years, from recovery.

But it does not automatically follow that future earnings performance need be pedestrian. What has also happened over the past three years is that the group has completely degauged its balance sheet. This involved repaying about R26m of debt while at the same time maintaining a fairly brisk capex programme. In this context, the present expansion, involving R110m in capex to be spent over the next three years (against R88m for the previous four years), is unlikely to induce much strain on the balance sheet and, assuming current profitability and cash-flow levels are maintained, may not even prevent a build-up of cash.

From a structural point of view, therefore, the group could consider acquisitions as a means of absorbing surplus cash flow. And while it is true that Dunlop has never been particularly active on this front in the past, it is equally true that, in recent years, management has been kept busy bringing order to the existing spread of activities.

For the moment, however, the company is projecting no more than growth in line with the nominal growth of the economy for the current year. It could do somewhat better as regards earnings, but a dividend increase of more than 15% is unlikely, given management's commitment to continue building cover, which has only just topped two.

But even a 160c (1989: 140c) payout would yield over 8% at the current 1950c, suggesting further upside potential for the share, despite its 50% gain over the past year.

Nu-World's 1989 results reflect its dependence on the highly cyclical consumer market and a heavy capex programme. Deteriorating economic conditions, a
Goodyear USA defeats proposal to break SA ties

A FORMAL proposal that Good-
year USA sever its ties with Ty-
con (formerly Goodyear SA) was
defeated at the AGM of share-
holders in New York yesterday.

College Retirement Equities
Fund (CREF) — which owns $2
million Goodyear shares worth
about $72m, yesterday proposed
to Goodyear shareholders that
SA ties be severed. CREF is the
largest single shareholder in
Goodyear USA, with a 3% stake.

Piet Neethling, group MD of

Anglo Vaal's Consol, which pur-
chased Goodyear SA for R178m,
confirmed the defeat of the pro-
posal, saying "it would appear
the majority of shareholders and
certainly management of Go-
dyeyar are opposed to the idea".

Neethling said CREF had reg-
ularly, over many years, made
calls for Goodyear to divest
and was now calling for a sever-
ing of all ties.

The acceptance of the propos-
als would have disruptive effects
on Tycon's technology and brand
name agreements with Good-
year, Neethling said.

"Such a move would be a sad
event as we are certainly depen-
dent on Goodyear technology
and also use the Goodyear and
Kelly-Springfield brand names."

Tycon is also tied in with Go-
dyeyar USA's international sup-
ply networks. Neethling said Ty-
con would probably be able to
continue for about 12 months
and would then need to make
alternative arrangements.

CREF spokeswoman Claire
Sheehan said: "We are delighted
that Nelson Mandela is now free,
and that is a significant step for-
ward. However, it would be pri-
mature for (CREF) to change its
position until we see the actual
dismantling of the apartheid
system."
Economic squeeze plans Malawis growth

The Star Wednesday April 25 1990 146

The trend towards slower economic growth in Malawi is reflected in the government's economic policy of austerity measures, aimed at reducing budget deficits and controlling inflation. The government has implemented a series of measures, including cuts in public spending, increases in taxes, and restrictions on imports, in an attempt to stabilize the economy and attract foreign investment. However, these measures have led to a contraction of the economy, with lower growth rates and increased unemployment. The government is seeking to balance the need for economic stability with the imperatives of social development and poverty reduction. The challenge is to find a path towards sustainable economic growth while addressing the pressing needs of the population.
Quality Tyres to cost Malbak R45m

BRENT MELVILLE

This gross cost to Malbak of liquidated Quality Tyres had been pegged at R45m plus the group’s original investment, Malbak directors said yesterday.

In addition, the group had written off its 41% investment in Quality to the tune of R6m, they said.

Malbak financial director Peter Beningfield said the 31c in the rand offer accepted by Quality Tyres creditors in open tender translated into a gross cost to Malbak of R45m. The company was placed in voluntary liquidation last December.

Beningfield said, however, that after

Malbak

realising certain of Quality’s assets at better than purchase value, the final cost should be reduced by the over-recoveries in surplus assets, stocks and debtors and should be closer to R25m.

He estimated that at the time of purchase total debtors were worth about R28m, though allowances had been made for some of the more “dodgy” ones, he said.

Beningfield added that Quality was having no trouble with its suppliers: “They have appreciated that Malbak did not have control of the company.”

At its peak last year Quality Tyres was the second largest new tyre distributor and retreader in the country.

See Page 13
Gentyre expects to beat inflation rate

GENTYRE directors expected earnings growth in 1989 to be in excess of the inflation rate, given stable operating conditions, Gentyre chairman Terry Rolfe told shareholders in the 1989 annual report published today.

The FSI Corporation-controlled tyre company increased earnings a share by 20% in 1987, 41% in 1988 and 40% in 1989. In the past five years its share price has risen from R220c a share to an unquoted 2050c yesterday.

Rolfe said demand for Gentyre products continued at a high level in 1989. Demand for Gentyre’s Continental tyre brand had resulted in demand greatly exceeding its capacity to supply. The problem was compounded by growing demand for General Tyre passenger and truck tyre ranges.

This constraint was being addressed in a capital expenditure programme to increase production capacity by 40% at its Port Elizabeth tyre factory.

The annual report showed cash-flush Gentyre had R39m cash on deposit. Capital expenditure commitments for the year to December were R31.5m (16.5m).

During 1989 a group restructure saw the operations of the tyre division and certain companies in the industrial division transferred into two separate operating companies enabling sharper management focus and greater efficiency.

Gentyre’s industrial rubber products division, which held operating profit of R363.3m in 1989, contributed 14% to Gentyre’s operating profit of R2459m.

Gentyre’s turnover increased 16% to R435m for the year. Abnormal bad debts written off increased from R2.7m to R6.34m.

Anticipated losses from the liquidation of Quality Tyres were provided for in the earnings of 28c a share, while return on assets rose from 34.5% to 39.3%.

EDWARD WEST
Malbak dismisses shareholders’ Quality complaint

BRENT MELVILLE

DISCLOSES this week that Malbak was expecting to recoup much of what it paid to creditors of Quality Tyres has prompted allegations by several of Quality’s minority shareholders that Malbak had effectively “stolen” the company.

Malbak promptly dismissed the suggestion as ridiculous and completely without foundation. Business Day reported this week that the acceptance of the offer by Quality Tyres creditors in open tender translated into a R45m cash payment by Malbak.

This is the gross cost of Malbak’s open tender offer for Quality’s assets, and will reduce as normal creditors and borrowings are brought into the new business.

But, irked by the fact that they have been sidelined since Quality Tyre’s October 24 suspension, minority shareholders suggested to Malbak financial director Peter Bevingfield on Wednesday that all shareholders had not been treated equally and the competitive bid by Tredcor should have been accepted by liquidators instead.

Bevingfield’s response was to remind them that Malbak itself had been forced to write off its 41% investment to the tune of R18m as its full potential loss. “In addition shareholders are not entitled to any share of a liquidated company,” he said.

A Deloitte spokesman said that there could have been a payment to minority shareholders only if Malbak had taken over in terms of section 311 of the Companies Act.

Surplus assets

Deloitte, acting as liquidators, confirmed that the overall amount owing by Quality had been R118.4m.

Of the total, R6.3m would be paid at the 100% level to preferred (R1.5m) and secured (R2.8m) creditors. Of the R112m balance — to be paid at 51c in the rand — banks were owed R39.7m, tyre companies R25.6m and minor creditors the remainder.

Of the R45.4m outlay, therefore, R34.8m would be paid on the 51c in the rand basis, R6.3m at 100%, and R4.3m would go to liquidation expenses. Bevingfield reckons that Malbak will over-recover surplus assets, stocks and certain debtors worth about R20m.

Quality Tyre’s last traded value was at 145c a share. With 33.7-million shares in issue, this valued it at R48.9m.

Minorities, with an 18% holding, lost out on R6.8m.

Bevingfield said Quality still retained its position as the second largest new tyre distributor and retreader in the country, though there were no plans to relist. Quality Tyre’s listing was terminated on February 27.

Malbak executive chairman Grant Thomas said Malbak’s decision to acquire the interest in Quality, and merge it with its own tyre interests, had been based upon its audited accounts and subsequent management accounts — which contained material irregularities.

Even after the acquisition certain accounts presented to the board were unsatisfactory.

An investigation into the “irregularities” and an inquiry under the Companies Act resulted in the estates of Quality Tyres directors Alex Hawes, Edward Philip, and Bazil Bruce O’Heghley (who together controlled 41% of the company) being sequestered. O’Heghley has been retained by Malbak and is still with Quality Tyres.

Gentyre's strong performance can be attributed more to interest receipts and lower taxation than to any improvement at the operating level. Earnings rose 40% on 16% turnover growth and a 13% rise in pre-interest profit. Capacity constraints prevented the company from taking full advantage of demand for its tyres which provide about 80% to operating income. Chairman Terry Rolfe hopes this year's capex programme will narrow the demand-supply gap but warns of a shortfall will persist for some time. The constraints reflect a marked swing in consumer preferences to steel-belted tyres. Gentyre's steel-belted Continental tyre is fitted to new vehicles in the top range and demand remains "exceptionally strong."

Trading margin fell slightly in 1989 with the advent of rent payments and a R,34m bad debt write-off when Quality Tyre went bankrupt. On the other hand, splitting the group into two separate operating companies — tyres and industrial rubber goods — improved efficiency and reduced costs.

Properties sold in 1986 as part of a 10-year buy-back agreement are now rented by the group. The sale boosted cash balances and helped attributable earnings. The group had net cash of R39m (R22.3m) at the year-end and earned net interest of R3.2m against the previous year's R2.7m payment. Rolfe says cash is still being amassed in anticipation of extensions to the Port Elizabeth factory. He also expects the effective tax rate to remain low for some years because of tax allowances, export incentives and further benefits from the corporate restructuring. Last year the industrial division increased its contribution to operating profit, emphasising was placed on high-tech products for niche markets, and less successful products were discontinued. Paragon, the country's only recycler of scrap rubber, has identified opportunities in the export market. Rolfe adds both divisions have met their budgets since January. He also expects organic growth in 1990 to give rise to a real increase in EPS. Earnings have grown at a compound 31% since 1984 and the share is standing at a 12-month high.
BTR Dunlop races ahead

Listed UK company BTR plc has every reason to be proud of its 25.3 percent investment in SA-listed BTR Dunlop whose trading profit was 50 percent higher than in 1986 and exceeded R100 million for the first time.

The increase in profits stems from productivity and efficiency programmes, combined with the benefits of higher sales volumes, says MD Clive Hooper.

Although sales increased in 1989 by 19 percent, only five percent was real growth.

But the most outstanding feature of the 1989 annual report was that pre-tax profits were a mammoth 16.92 percent (1988: 13.29 percent) of sales, with attributable earnings at 11.40 percent (1988: 7.21 percent) of sales.

These are significant percentages and when a bottom line virtually doubles that of the preceding year, one's curiosity is aroused.

Not only has debt declined to R4.05 million (1988: R13.73 million), but there is now a healthy cash balance of R3.42 million (1986 nil).

Actually BTR Dunlop needs the high profits to fund its R110 million capex programme over the next three years, primarily to meet the continuing swing to steel-belted radial tyres in both the car and truck markets, including special high-performance car tyres and the high demand for earthmover tyres.

Already R31.8 million was spent in 1989.

But Mr Hooper is unhappy that tax depreciation rates were charged again at the end of 1989, “thus adding to business uncertainty in our high-tax environment”.

This must be worrying him for the future as BTR Dunlop actually lowered its effective tax rate to 32.15 percent in 1989 (1988: 45.74 percent) thanks to the higher capex allowances.

BTR Dunlop is engaged in three fields — engineering, and industrial, which produced 49 percent of sales (1988: 45 percent); motor, which made 39 percent of sales (1988: 42 percent); and consumer with 12 percent (1988: 13 percent).

But motor produced 45 percent (1988: 49 percent) of trading profit, with engineering and industrial 43 percent (1988: 41 percent) and consumer the balance, showing the motor division to be on the decline.

The group's objective is to achieve a real growth in sales and profits, in line with the development of the SA economy, says chairman Drury Gnadde.

This will help increase earnings and dividends, while increasing dividend cover to maintain a sound financial base — certainly a wise strategy ensuring that funds are ploughed back for growth, rather than an escalating debt with massive dividends merely to keep investors happy.

Management’s conservative financial policy is well illustrated in the current numbers and trend of the past four years.

Sales totalled R631.8 million (1988: R595.5 million), with trading profit at R110.8 million (1986: R74.1 million) and a pre-tax profit of R106.9 million (1986: R79.3 million).

Cost of financing was virtually unchanged at R4.82 million (1986: R5.72 million), giving pre-tax profits of R102.9 million (1986: R73.6 million).

After deducting tax of R34.4 million (1986: R32.2 million) and the unchanged profit dividend of R50.8 million, attributable earnings were R77.4 million (1986: R30.97 million) — a massive leap of 90 percent.

Earnings per share were 310c (1986: 165c), with the annual dividend lifted only 33 percent to 16c (1986: 12tc).

A new range of steel-belted car tyres was successfully launched during the year and, together with the reorganisation of the tyre business and rationalisation of industrial products manufacturing, helped produce the superb results.

The local tyre industry made little headway, continuing as it did with low-priced imports from the Far East.

Demand for mining and industrial products was static, but sales of automotive products increased.

The consumer and engineering divisions had a good year.

Accounting for deferred tax was changed to the partial method in 1989 and 1988’s comparative numbers are restated.

Ordinary shareholders’ equity totalled R285.7 million (1988: R283.1 million) at end-December 1989 — the difference being a R4.3 million increase in non-distributable reserves and profits retained.

Plant, machinery, equipment and vehicles with a book value of R78.9 million (1986: R63.4 million) had an insured value (replacement value, I presume) of R76.2 million (1986: R63.9 million) at end-December 1989 — consider a 100 percent difference!

Working capital increased to R103 million (1988: R80 million). Net worth per share of R11.71 included R3.14 of help from the non-distributable reserve (predominantly the revaluation of fixed assets), compared with the current JSE price of around R19.25.

A consolidating year is forecast for 1989, with trading profits expected to grow in line with the economy and inflation, says management.

I always question when a group produces such a massive leap in profits whether it is fuelling the country’s already high inflation rate.

The bottom line as a percentage of shareholders’ funds doubled from 13.7 percent in 1986 to 27.1 percent in 1989 and the cash flow produced — retained profit after dividends plus depreciation — improved from R12.2 million in 1986 to R54 million in 1989.

In fact, it doubled from the R27 million in 1988.

Small wonder that BTR has the funds to reduce debt and fund capex.

With the number of employees virtually remaining constant over the last four years, I question why some of the high profits made were not used to create new jobs and so demonstrate some social responsibility.
Duty hike hits tyre imports

Own Correspondent

DURBAN — Truck and bus operators have been hit hard by an effective 200%-300% increase in duty on new tyre imports. 2/11/70

The move by the Board of Trade and Industries follows an application for the increase at the beginning of 1969 by the SA Tyre Manufacturing Conference (SATMC). It is an attempt to protect local manufacturers by preventing the dumping of cheap imported tyres on the local market.

This has aroused wide concern among tyre dealers and refitters, who say the duty increase might well rule out future imports on certain tyres.

The effect of the increase is that truck tyres now cost R5,60/kg instead of just having a 25% duty tacked on to the price of the imported tyre.

Natal MD of Natyre Ken Case said: "With locally manufactured tyres still in short supply, there is no doubt that this will have an impact on inflation with the price of local truck and bus tyres rising substantially."
Tyre duty not likely to affect local prices

Charlotte Mathews

The tyre industry does not believe the increase in import duties on all tyres — of the magnitude of 200%-300% in the case of bus and truck tyres — will make a difference to local prices.

Spokesmen said the new duties were intended to prevent cheap tyres being dumped here and were below the rates applied to most current imports.

SA Tyre Manufacturers' Conference (SATMC) director Michael Waterson explained on Wednesday that with effect from 23 March the Board of Trade had revised the formula duty on imported tyres; previously established about 10 years ago.

All tyres are liable for either a 25% ad valorem duty or a formula duty, whichever is the greater.

The formula duty, which would only apply in a few cases, has been revised upwards said SATMC chairman and Gentyre MD Clive Tutton.

However, the revision, which in the case of truck tyres appears a big jump to R8,60/kg (less 75% of the FOB value) from R3/kg, would not apply except in the case of "abnormally low priced imports".

According to the BTI report, "certain imported categories such as giant truck tyres are priced at relatively lower levels, thus rendering the local industry uncompetitive", Waterson said.

He showed that the Japanese FOB price for truck tyres was R5,50/kg against the France's R4,60/kg, Italy's R9,35/kg, the UK's R10,65/kg, Spain's R8,55 and Germany's R9,17/kg. "Imports from none of these European countries are affected by the formula duty being above R9,60/kg," he added.

Waterson said the BTI had removed all duties on rear tractor tyres last year and also duty protection on earthmover tyres between 20kg and 250kg.

Performance Tyres — which imports Pirelli tyres — MD Steve Thomas felt the SATMC and the government had missed the whole point.

"A very high percentage of cars on SA's roads have smooth tyres," he said. "If the law was enforced properly, the tyre manufacturers, importers and retailers would all benefit." Government's solution was only a short term one, he argued.

Under the new Traffic Act which comes into operation from 20 July vehicles with worn tyres which have a tread of less than 1mm on the whole width of the tyre will carry a penalty of R2 000 or six months in prison or both.

WAGE ACT, 1957

CANCELLATION OF WAGE DETERMINATION 458.—RUBBER AND RUBBER PRODUCTS IN- D U S T R Y, CERTAIN AREAS

Any person who desires to comment on the proposed cancellation should submit such comment within 30 days from the date of publication hereof to the Direc- tor-General: Manpower, Private Bag X117, Pretoria, 0001.
Gentyre in 74% buyout of Aeroquip

CHARLOTTE MATHEWS

GENTYRE has acquired 74% of Aeroquip SA for RM and the remainder has been bought by senior Aeroquip management from holding company Trinova, the company announced yesterday.

Aeroquip SA is the sole local representative for the US Aeroquip Corporation, which is the world’s largest manufacturer of hydraulic hose and fittings. (11)

Commitment

In terms of the sale the SA company has a 10-year licence, trademark and manufacturing agreement with its US parent. It will trade as Aerotech Hydraulics.

"The American company’s commitment to SA remains unchanged," a spokesman from Aerotech said. "Customers will find that Aerotech prices, services and deliveries will remain identical to those previously offered by Aeroquip SA.

"If anything, customers may look forward to an even better service thanks to the backing of Gentyre, a major force in the local industrial rubber market."

Gentyre financial director Geoff Sproule said Aerotech would be part of Gentyre’s industrial division.
Major Pitfalls on the Acquisition Trail

The acquisition process can be fraught with challenges and pitfalls. Here are some common issues that can arise during the acquisition phase:

1. Overestimating the benefits:
   - Expectations may be too high, particularly if the company is not fully aware of the target's capabilities and potential drawbacks.
   - Proper due diligence should be conducted to ensure a realistic assessment of the target's strengths and weaknesses.

2. Underestimating integration costs:
   - Integration costs can be significant and may include personnel, technology, and operational issues.
   - A detailed plan for integration should be developed to mitigate these costs.

3. Ignoring the cultural fit:
   - Differences in corporate cultures can lead to conflicts and decreased productivity.
   - A strong strategy for integrating cultures should be implemented to ensure smooth operation.

4. Over-reliance on financial metrics:
   - Financial metrics alone may not provide a complete picture of the target's potential.
   - Other factors such as market position, customer relationships, and product quality should also be considered.

5. Ignoring regulatory challenges:
   - Acquisitions can be subject to regulatory scrutiny, which can delay the integration process.
   - Adequate planning for regulatory compliance should be in place to avoid delays.

6. overlooking the potential for integration issues:
   - Integration issues can arise from differences in technology, processes, and management styles.
   - A comprehensive plan for integration should be developed to address potential issues.

7. Overlooking the need for post-acquisition reviews:
   - Regular reviews should be conducted to assess the success of the acquisition.
   - Adjustments should be made to the strategy if necessary to ensure the acquisition is a success.

8. Overlooking the need for ongoing support:
   - Additional support may be required after the acquisition to ensure the target's success.
   - A strategy for ongoing support should be in place to ensure the target's continued success.

By addressing these potential pitfalls, companies can increase the likelihood of a successful acquisition.
13 pc of tyres in use are illegal – industry

By Shirley Woodgate

More than 1.6 million, or about 13 percent, of tyres in daily use on South African roads are illegal and potentially lethal.

According to a tyre industry survey involving 23,000 tyres on vehicles in all income brackets, one out of every eight tyres in use in the country is worn below the minimum legal tread depth of 1 mm.

Under the recently introduced Road Traffic Act this offence may be penalised by a maximum fine of R2,000 in court or a R30 spot fine.

Experts have said a driver who cannot control his car in wet conditions because of smooth tyres is a risk to other road users, passengers and pedestrians.

Aegis Insurance legal department spokesman Yolanda von Geyw said that if a vehicle involved in an accident was not "maintained in a proper (road-worthy) condition," a claim would be repudiated.

This included smooth tyres, she said.

Deputy director of the National Road Safety Council Eric Wise said the "human element" was the cause of 90 percent of all road collisions, while the vehicle or "surroundings" accounted for 10 percent.

Usually the cause of an accident was not merely an isolated item, but a combination including perhaps, smooth tyres, alcohol and incorrect speed while cornering.

Just as the problem was multifaceted, the solution lay in a multidisciplinary approach: education, enforcement and engineering, he said.

AA general manager (technical) Johan Barkhuizen said his organisation had set up a free pre-holiday advisory and test station at the Gosforth Park toll plaza until July 7 where motorists could obtain information which would include a proper evaluation of their tyres.
TYRE MANUFACTURING

Another plea for help

Just two months ago the tyre manufacturing industry fought for and got an increased duty on imported tyres.

Now it is complaining that the higher duty failed to stop the flow of cheaper imports and it's asking government for more protection.

SA Tyre Manufacturers' Conference chairman Clive Tutton claims imported tyres are still being sold at below cost. Though tyres are among the few commodities for which import permits are still required, he says importers have no difficulty bringing them in through the independent homelands and Swaziland and undercutting local tyre prices.

He puts the fob value of tyres imported in 1988 at R73m. In 1989, he says, the value of imported tyres jumped to R140m. Even more, he predicts, will be imported this year, despite the higher duty.

Gert Fischer, the incoming director of the SA Tyre Manufacturers' Conference, who succeeded Michael Waterson on July 1, says the import duty on truck tyres increased from 25% of their fob value or 300c/kg, less 75% of their ad valorem value, whichever is higher, to 860c/kg less 75% of their ad valorem value.

Government has not yet ruled on the request for additional duties. A Board of Trade & Industry official says only that "it's being dealt with."

The transport industry, predictably, disagrees with Tutton's call for more protection. Transport Technical Industries CE Philip Erasmus claims that with the 7.5% import surcharge, the duty on tyres has been increased by 72.5%.

"There was little difference between local tyres and Japanese tyres before the imposition of the new duty," Erasmus says. "We used to import half the tyres we used from Japan, but that's no longer cost effective."

Tyre Dealers' Association chairman Chris Immelman says the increased duty on imports "hasn't made much difference to the cost of a car tyre, but has added R120 to the price of a popular truck tyre selling at R900, which brings it into line with the price of a similar tyre made in SA."

There's no question the industry can't compete with foreign manufacturers on its own. But instead of asking for more protection, it should be tackling the factors that make it uncompetitive. For example, local tyre manufacturers that keep their factories going 235 days a year can't compete with foreign manufacturers that reduce costs by producing tyres 347 days a year.

However, government is responsible for much of the industry's uncompetitiveness and that's where manufacturers should concentrate their lobbying. For example, local manufacturers face a restriction on the amount of raw material they can buy abroad while foreign manufacturers are free to buy raw materials at the lowest available prices, whatever the source.

Manufacturers are allowed to import natural rubber but must pay a 25% duty. There is no local alternative. Karbochem no longer makes the synthetic replacement for natural rubber. It does, however, make the other rubber they use. Karbochem charges more for its products than they cost abroad so the 25% import duty levied because synthetic rubber is regarded as a strategic industry shields the company from competition.

Karbochem MD Ben Schoeman believes the 25% duty on natural rubber will be phased out soon. He says the company stopped making the synthetic alternative, polyisoprene, at the end of May because it could no longer compete with natural rubber — even with the 25% duty. "When we started the plant 10 years ago natural rubber was selling for US$970/tonne. Schoeman says. "The price has since dropped to $780/tonne."

Competing with imports

Karbochem's Newcastle plant is still making butadiene rubber and styrene butadiene rubber for the tyre industry. Schoeman claims that Karbochem's prices are competitive with international prices for similar types of imported rubber, but concedes that its prices become competitive only after the 25% duty is added to the cost of imports.

He says the high price of locally made tyres can't be blamed on Karbochem; the company has increased its prices by only 20% in two years.

Instead he points to the high cost of transporting the imported raw materials needed to make rubber. Butadiene has to be transported to SA in gas ships and from Richards Bay to Newcastle in special rail tankers. "The cost of sea freight alone is $160/tonne," he adds.

David Pinces

FINANCIAL MAIL JULY 6 1990
Southeastern Africa must report to the Regional Economic Commission for the generation of economic and business development projects. These projects should be formulated to address the following objectives:

- Identify growth in regional integration and trade relationships.
- Promote investment in the private sector.
- Enhance infrastructure development.
- Foster agricultural development.
- Promote environmental sustainability.

In this context, the need for improved communication and cooperation among stakeholders is crucial. The Regional Economic Commission plays a pivotal role in coordinating these efforts.
Leader Tread set for management buy-out

MANAGEMENT of Leader Tread is to buy out its US holding company's minority shareholding for an undisclosed amount, MD John Sproson said in an interview yesterday.

According to Sproson, Leader Tread and US parent Oliver (Rubber) USA had recently decided not to renew the US parent’s licence in SA because of pressure from the parent’s pension fund.

As a result of the licence not being renewed, Oliver Rubber Company (SA) had, at the time the management buy-out was being negotiated, changed its name to Leader Tread.

Leader Tread is SA’s largest manufacturer and supplier of pre-cured rubber to independent retreaders.

Coupled with the disinvestment, Leader Trend has launched a R4m expansion programme.

This included the installation of sophisticated Italian machinery to double production capacity at its associate company Custom Compounds.

Leader Tread has the largest pre-cured plant in the southern hemisphere with a capacity to process more than 600 tons of rubber a month.

It supplies about 100 independent retreading companies in southern Africa and has appointed agents in the UK, supplying 24 factories with its products.

Exports constitute about 15% of sales and Sproson said the company was looking to improve its export market, especially in Spain and Portugal.

He said its designs in tyre treads and the market growth of steel-belted tyres gave it scope in the competitive European market.

Sproson said the disinvestment of the parent company would provide new opportunities for Leader Tread, the growth of which had been constrained in the past by US disinvestment policy.

The company was to become more market oriented, he said.

Over the past few months Leader Trend has spent about R2.6m on the acquisition of several additional machines and the modification of older equipment.

This was to cope with the addition of output and the revamped factories will be fully operational at the end of July.
Malbar Face!
TYRE FIRMS DISAGREE ON WHO IS KING

EDWIN UNDERWOOD

BANDAG (SA) and Leader Tread have called in their lawyers over conflicting claims about who has the largest manufacturing capacity for pre-cured rubber for the retread tyre market.

Bandag MD Nobby Cock said yesterday that Bandag was prepared to call in qualified independent assessors to determine who SA’s largest manufacturer is.

While Leader Tread claims to be the largest supplier to independent retailers, Bandag says a market survey shows it has 44% of the SA, Swaziland and Namibian markets for retreaded tyres and 51% of the market for pre-cured rubber against Leader Tread’s 23% and 28% respectively.

Leader Tread MD John Sproson said Leader Tread supplied about 100 independent retreading companies in southern Africa and had appointed agents in the UK supplying 24 factories with its products. Its export constituted about 15% of sales.

Cock said Bandag had an operational plant capacity of 1 000 tons a month and Bandag International was the largest pre-cure manufacturer in the world on a daily basis, producing about 26 000 retreads a day.

Sproson was quoted previously as saying his firm had a plant capacity of over 600 tons of rubber a month. This, Sproson said, was “merely a fancy of speech to indicate the firm’s ability to produce large volumes”.

196
BTR Dunlop's excellent results for the six months to June are in sharp contrast with recent weak performances in the industrial sector.

Earnings per share were up 38 percent to R36c (320c) and an interim dividend of 60c (50c) has been declared.

The sales increase was reasonable 16 percent, but bottom-line performance was boosted by a substantial increase in operating margins.

The latest results see a continuation of the stronger trend evident in financial '88 and '89.

The market had expected weakness in the economy to hinder this trend, but it obviously underestimated the extent of the pent-up demand for tyres and the level of capacity at which BTR Dunlop operates.

Turnover was up 16 percent to R336.6 million (R290.8 million) and operating profit rose 34 percent to R60.5 million (R45 million), reflecting a strong increase in margins — from 15.5 percent to 17.9 percent.

Financing costs were up to R25.8 million (R21 million).

The tax rate was down to 33.7 percent from 34.5 percent. This was due to the allowances applicable to the higher capital expenditure in '89 and which continued to be applicable to the current year.

Attributable profit was up 38 percent to R38.1 million (R28.1 million).

An abbreviated balance sheet shows borrowings shot up to R26.3 million from R5.9 million.

But this still leaves gearing at a minimal nine percent.

This comfortable position reflects the benefits of management's success in de-gearing the balance sheet in the second half of the Eighties.

This year's increase in borrowings is attributed to the higher level of activity, to inflation and to the R40 million capex, effected in the year to June 1990.

This capex is part of the three-year R110 million programme. Most of it is being devoted to the tyre factories in Durban and Ladysmith to meet the rising demand for truck, minibus and car tyres.

MD Clive Hooper says that despite tightening trade conditions, real growth is expected.
Fine results from BTR Dunlop:

EDWIN UNDERWOOD

BTR DUNLOP, manufacturer and marketer of industrial, engineering and car consumer products, has reported an impressive set of interim results with earnings a share rising 33% to 162c a share (120c).

An interim dividend of 60c has been declared, a 25% rise over last year’s interim of 50c.

Boosted by a 2.5% rise in profit margins, attributable profit for the six months to end-June increased by 36% to R38m (R28m) on a 16% improvement in turnover to R336.6m (R290.8m).

The tax allowance on R40m capex this year resulted in a further tax saving of R4.4m.

The directors said that while trading conditions would be more difficult during the second half of the year, BTR Dunlop would maintain its growth above the rate of inflation.
Trencor earnings boosted by export and overseas activity

By Ann Crotty

A sterling performance from export and overseas activities has enabled Trencor to report a 68 percent hike in earnings for the 12 months to June.

Over 50 percent of group earnings now stem from overseas sources.

Earnings per share were ZR5.17c (387.8c).

A final dividend of 100c a share has been declared, bringing the total to 130c — 94 percent up on the previous year's 67c.

This takes dividend cover down from five to 4.4 times. The lower dividend cover is in line with the reduction in gearing, which is down to 30 percent.

On a 13.7 percent increase in turnover to ZR764.8 million (ZR69.7 million), pre-tax income shot up 44 percent to ZR112 million (ZR77.7 million).

This reflects the change in contribution from the four divisions — manufacturing, motor trade, trading and transport — with the trading division making a far larger contribution in both absolute and percentage terms.

The change in divisional contribution is reflected in the reduced tax rate — down from 30.6 percent to 21.9 percent.

The trading division covers export activities and foreign associates. The former enjoys export incentives and the latter incurs minimal tax rates.

Attributable income was up 69 percent to ZR31.8 million (ZR45.4 million).

A break-down shows manufacturing's contribution to pre-tax profit slipped from 39 percent to 30 percent.

Motor trade

Motor trade (including tyres) was down from 30 percent to 26 percent. Transport's contribution fell from 14 percent to eight percent and trading shot up from 17 percent to 36 percent.

The changes reflect the relatively much stronger performance from the export and overseas activities.

But chairman Neil Jowell says in absolute terms contributions from all divisions were up.

"We had expected a reduction on the domestic front, but it didn't happen. It was only towards the end of June that we noticed much weaker conditions."

Referring to the strength of export activities, Mr Jowell says: "The Government's policy of promoting exports encouraged the Hendred-Freuhalf subsidiary to increase significantly the volume of containers made for export and to introduce new products such as tank containers and components for containers.

"These were well received in foreign markets after initial start-up problems and, with higher volumes, made a major contribution to this year's earnings."

This has encouraged the group to increase capacity, despite the uncertain world economy and reduced prices.

The changing government export strategy is likely to favour the Hendred-Freuhalf manufacturing activity since it involves no import content.

For financial '91 management is expecting a reduction in contribution from domestic activities, but an increased contribution from overseas and exports to the extent that they will account for around 60 percent of earnings."
Thanks to what management describes as improved operating efficiencies and tight control of overheads, operating profit for the six months rose by 34% on a 16% turnover increase. MD Clive Hooper says turnover was lifted by 3% in real terms, on the back of a tyre replacement market that held up very well and a big back order for conveyor belts for a mine.

By all appearances, a successful merger was achieved. The question is: how much longer will the group be able to maintain these profitability improvements in the face of slackening demand? Management obviously spent much time and effort in strengthening the operations over the past four years.

The group must now be operating close to its best efficiency.

Growth prospects must now be more in line with economic activity. Vehicle sales have weakened in the past year and the motor sector remains BTR Dunlop's largest income source after having kicked in 45% of trading profit and 39% of sales last year. Another 41% of trading profit and 49% of sales were from the industrial and engineering sectors. These include the mining industry, which is known to have cut back generally on capital and operating expenditure.

The group has been taking steps to adjust its product range to market developments. It recently embarked on a R110m capex programme to expand capacity to make radial steel tyres for cars and trucks. The group was ungeared at the last balance sheet date but borrowings have been creeping up as the capex programme progresses. At end-June about R40m had been spent while borrowings increased to R26,3m from R5,9m.

Hooper expects trading conditions to be more difficult in the second half but expects the group will maintain both sales and profit growth above the inflation rate. For the full year, this translates into projected turnover of more than R700m and operating profit exceeding R130m.

The share trades at 2,500c and was unaffected by release of the interim results last week.

**Firm Tread**

Since 1986, when the local operations of BTR and Dunlop were merged, earnings reported by the combined operation have been powered largely by a widening trading margin.

The margin has increased from 10,1% in that year to 17,6% in 1989, and the trend continued in the first half of the 1990 year.

BTR DUNLOP
New tyre businesses help put bounce into Consol

CONSOL's attributable earnings jumped 48% in the year to end-June, benefiting from the absorption of its new tyre businesses and a change in its accounting policy.

Attributable profits reached R101m (R66.3m) or earnings of 157.7c (106.5c restated) a share. A total dividend of 45c (33c) a share has been declared, up 36% and covered 3.5 (3.3) times.

However, had Consol not changed its accounting method for deferred tax to the partial method, earnings would have been 128.4c (102.3c) a share.

The group's results include those of Tycon, formerly Goodyear, for the full year and those of Tredcor, the tyre retreader and retail distributor which merged its operations with Tycon in January, for six months.

Consol's turnover, boosted by these additions, jumped 111% to R1.6bn (R738m), while operating profit improved 74% to R203.5m (R120.6m).

Group MD Piet Neethling says the packaging operation's turnover increased 10% and its operating profit rose 16% to R140.5m.

Glass packaging benefited from satisfactory consumption growth in the beer and softdrink markets, although wine and spirits disappointed.

The paper packaging division found the corrugated box market soft. The plastics division reported no market growth in rigid plastics and a highly competitive flexible plastics market.

Two flexible plastics divisions, industrial flexible plastics (formerly Gundle) and the woven polypropylene bags and sacks operation, were sold because of persistent unsatisfactory returns, says Neethling.

The rubber sector contributed R742m to turnover and R70m to operating profits. However, Tycon's manufacturing performance was adversely affected by a prolonged strike and a go-slow resulting from labour force disinvestment demands.

Neethling says the unsettled labour situation, which persisted until the December shutdown, had an adverse effect on turnover and market share.

However, the situation has stabilised since January and market share should be fully restored in the current year, he says.

Tredcor reported marginal growth in the replacement tyre market, but benefited from contributions from additional outlets and improved demand for retreading. A small sales volume increase and good cost controls resulted in satisfactory profit.

Neethling says operating margins in the packaging operations improved to 17.5% (16.4%), boosted by the sale of the two plastic businesses and productivity improvements in other operations.

Margins in the rubber operations, at 9.4%, were affected by industrial action at Tycon and traditionally low margins in Tredcor's business.

Consol's interest bill jumped to R23m because of increased borrowings to fund the new glass furnace at the Clayville factory and other replacement and improvement capital expenditure.

Neethling says while the current year will be influenced by persistent recessionary economic conditions, high interest rates and political uncertainty, Consol still anticipates earnings growth.

This is because of the expected rise in demand for beer and softdrink bottles, a full year's benefit from the new Clayville glass furnace, the trend to steel radial tyres, the planned enlargement of steel radial tyre capacity and a full year of earnings from Tredcor.
Longmille puts on a spurt

Longmille has reported a 21 percent hike in earnings to 48.3c (40c) a share for the 12 months to June.

A final dividend of 9.1c a share has been declared, bringing the total to 12.1c (10c) a share.

The earnings increase was achieved on a two percent rise in turnover to R402 million (R393.7 million), with operating income up 25 percent to R44.2 million (R35.4 million), which means a hike in margins from nine to 11 percent.

Interest payments were up R113 million (R93.5 million) and the tax rate rose from 20.6 to 26.7 percent, leaving taxed income showing a 19 percent advance to R24.4 million (R20.6 million).

Attributable profit was up 21 percent to R24 million (R19.9 million).

The balance sheet shows a sharp increase in working capital — more than tripling to R12.2 million from R4.3 million.

No information is provided, but the hike may partly reflect the increased investment in the clothing division.

Long-term liabilities are up from R2.8 million to R13.4 million.

Referring to this, management says: “Greater detail will be provided when the annual report is published at the end of the month.”

But it says that in view of the strong balance sheet, the increase does not “signal a pressure point”.

Longmille has four divisions: tyres, silencers, fasteners and clothing.

With effect from January ’90 its tyre interest (50 percent of Tredcor) was converted into an 18 percent stake in a group formed through the merger of Tycon and Tredcor.

The directors say the merger with Tycon has “proceeded well and made a satisfactory contribution to earnings”. No specific details are given.

In a circular sent to shareholders last March it was noted that if the Tycon/Tredcor deal had been in effect for the 12 months to June 1989, Longmille’s earnings would have increased 5.2 percent.

Longmille treats the Tycon/Tredcor operation as an associate.

Consol, which is the major shareholder in Tycon/Tredcor, last week reported that the operation had earned an operating profit of R70 million in the 12 months to June 1990.

On yesterday’s trading price of 180c, the latest results put Longmille on a P/E rating of 3.7 times and a dividend yield of 6.7 percent.
R12m rubber goods plant

THE FOUNDER of South Africa's biggest private hospital group, Barney Hurwitz, is backing a R12-million plant to make disposable surgical gloves and condoms.

The Aids scare has boosted the use of both products - many doctors and dentists wear two pairs of gloves as a precaution against infection.

Mr Hurwitz, executive chairman of listed Clinic Holdings, has been joined in the Latex Surgical Products venture by international latex technologist and chemist Andrew Marsolo, who is chief executive of the new company, and Simon Lipschitz, who has marketed latex products around the world for 17 years.

Mr Lipschitz estimates the market for surgical gloves at 14-million pairs a year - and growing.

"We hope to get a big slice of the market and we believe we can get major orders from Europe," says Mr Lipschitz.

Latex Surgical Products has strong links with private hospitals through Clinic Holdings, but it will also bid for State tenders.

Mr Lipschitz says: "The market has been plagued by shortages and some gloves imported from the Far East have not been up to standard. "The key to the latex rubber business is technology - and we are fortunate to be in the forefront."
Activities: Manufactures plastics, rubber and engineering products, primarily for the automotive and mining sectors, and sanitary ware.

Control: Directors 57.5%.

Chairman: D A Buchanan; MD: R M Dersley.

Capital structure: 22.2m ord. Market capitalisation: £7.3m.

Share market: Price: 35c. Yields: 8.7% on earnings; p/e ratio: 11.6 12-month high, 90c; low, 28c. Trading volume last quarter, 259,000 shares.

* 13 month period.

Solid growth in turnover and EPS posted a year ago by Ciskeian rubber and plastics producer Darmag persuaded the board to lift the dividend by 167%.

CE Monty Dersley believed then that new technology, enlarged capacity, improved efficiency and a low tax base would enable the group to maintain the growth trend. He notes, however, the shift towards use of plastic materials curbed demand for rubber products. Other products were being developed to take up capacity in this division.

Within a year, the rubber division was running at a loss because of product obsolescence and substitution of new products. The division contributed to the 75% tumble in EPS in the 1990 year when the dividend was passed. Why the board should have misread prospects so badly is unclear. The share price has now slumped to 25c from the 12-month high of 90c.

Management has been hoping for an upturn in the battery industry, the group’s major market, which would result in improved trading for the plastic division.
Gentyre earnings rocket by 61%  

GENTYRE Industries kept up a spanking pace in the six months to June, with the result that earnings rose by 61% and shareholders have been rewarded with a 72% rise in the interim dividend.

Not only did the group smoothly roll out more tyres and industrial rubber products, but good management of working capital paid off in a handsome interest income.

In addition, the low level of tax, which will continue for some years, boosted the bottom line.

Chairman Terry Rolfe predicts that, given no further deterioration in the economy, and stable operating conditions, Gentyre's year-end earnings growth will outstrip the inflation rate.

Gentyre's interim results prove it to be a gem in the FSI stable (Hunts has a 67% stake in the company) and Rolfe's prediction might well be too modest judging by the figures released today.

Attributable taxed profit soared by 61% to R35.3m from the previous comparable half-year's R18.7m, translating into earnings of 13.9c per share (10c a share). The interim dividend has been lifted to 5c (3.2c).

Turnover rose by 14% to R243.2m (R213.8m) while operating profit rose in line to over R31m (R27.3m). Rolfe comments that demand for Gentyre's tyres and industrial products held up well despite the general decline in the economy.

More freely available imports had their impact and the operating margin was held at 12.7% (12.8%).

The emphasis placed on the management of working capital enabled the group to maintain a high level of liquidity, giving rise to an increase in interest income from R7.4m to R8.6m for the six months, lifting pretax profit by 21% to R34m (R28m), says Rolfe.

The effective tax rate declined to 25% from 44%, thanks to allowances arising from the 1989 restructuring and, to a lesser extent, export incentives. No significant change in the tax rate is foreseen for some years.

In the past six months Gentyre made three strategic investments (including Aeroupel, which makes hydraulic hose and fittings, and Total Methanol Components).

Rolfe says these acquisitions will result in greater penetration of profit potential for hydraulic hose and fittings; expansion of the group's operation in recycling of scrap tyres to produce rubber crumb, and expansion into the manufacture and distribution of high-technology rubber and rubber-metal bonded products, largely for the automotive industry.
By DON ROBERTSON

TIGER WHEELS has ridden out a slump in the spare parts and accessory industry with a 17% increase in taxed profits for the year to June.

Reflecting its resilience to downturns in motors, Tiger lifted turnover by 26% to R51.7-million from R41.1-million in the previous year. Attributable earnings rose to R3.1-million from R2.9-million.

Chairmaa and chief executive Eddie Keizan says the reasons were reduced margins in the second half of the year, temporary labour problems at the Babelegi wheel factory and start-up costs of three Tiger Wheel & Tyre outlets.

Because of the increase in the issued share capital caused by an incentive scheme and the issue of bonus shares in lieu of dividends last year, earnings were marginally higher at 12,2c a share (11,3c).

The annual dividend has

EDDIE KEIZAN

Situated 237190 been maintained at 4,8c, but shareholders ma opt for bonus shares instead. They will be issued in the ratio of seven new shares for every 100 held. The issue puts a price on the new shares at almost 85c, the current price.

Mr Keizan says all divisions have potential for growth, but political and economic circumstances in SA and the world suggest a conservative approach.

Developments in the retail division look extremely encouraging. Its growth outpaced the rest of the group, including the wholesale division. The branch opened in Pretoria in March broke even in May and is now profitable.

Branches are to be opened soon in Cape Town and Sandton. A second franchised outlet is due for the West Rand.

The company has 15 franchised and cowed stores.

The Babelegi factory is to be expanded and production aimed mainly at the export market. The company exports to seven countries.

| Yields | 19c |

The sharp rise in borrowings from R1.5-million to R5.9-million at the end of the year related mainly to expansion.

Most borrowings, however, were from the Industrial Development Corporation, which offers a 5% export loan programme. As a result, the interest charge was slightly higher at R658 000 (R455 000).

In spite of higher borrowings, interest-bearing debt remains at 68%, strengthening the balance sheet to the extent that the net asset value has risen from 33,7c to 41,8c.

At $1.56, Tiger Wheels offers a dividend yield of 8,5% and a price earnings ratio of 4,5. Competitors such as Midas have a yield of 5% and offer price earnings of 6,8. Autoquip offers 8,3% and 4,6 respectively.
Tiger Wheels ups earnings to shareholders by 17%

TYRE and wheel group Tiger Wheels increased earnings attributable to shareholders by 17% to R3,4m (R2,8m) for the year ended June.

The increase came on the back of a 26% rise in turnover which reached R51,7m (R41,2m).

But a combination of reduced margins, start-up costs of new stores and the poor performance of the Babelegi wheel factory prevented the turnover increase from being carried through to the bottom line, CE Eddie Kezian said.

Kezian said the group’s manufacturing division performed below budget. “This was due, in part to a politically motivated two-week stayaway in the Babelegi factory.”

Also, start-up costs of three outlets at Port Elizabeth, Boksburg and Pretoria were carried during the year, along with extensive development expenditure on manufacturing operations, he added.

Because of the increased number of shares that followed the issue of Employee Incentive Trust shares and last year’s issue of bonus shares in lieu of dividends, the earnings increase at per share level was 8%; he added. Earnings a share increased to 12,2c (11,3c) and an unchanged dividend of 4,5c a share was declared. This was covered 2,8 times.
UK brokers give buy signal on Gencor

London brokers Laing and Cruikshank recommend purchases of Gencor even though earnings are expected to decline in the coming year.

Analyst Roger Chaplin believes shareholders might benefit from unbundling of the group's assets.

"They should buy the shares when the market is weak," he says.

Similarly to the UK tobacco company BAT, Gencor aims at realising the full value of its interests and is considering the best way to unbundle its divisions.

Gencor has five operating divisions — Gemmin, Sappi, Malbak, Engen and Genbel. Each has its own separate strong management and can stand alone, says Chaplin.

Foreign exchange dealing and insurance and some other group functions are centralised but they could receive contract payments from each division.

Of the five divisions, all but Gemmin are listed on the exchange.

Laing and Cruikshank believe Gemmin should become a listed holding company of the mines.

A decision is likely next February and speculation about the unbundling might boost the shares in the next few months.

Chaplin says Gencor is an ideal vehicle for the foreign investor. Over the past five years, Gencor's net asset value has grown at an annual average rate of 16.5 percent, while the share price has increased by an average of 25 percent each year.

"Diagonal Street"

NEIL BEHRMANN

In the same period, Gencor's earnings have risen by 16.4 percent a year, while dividends increased at an annual average of 11.4 percent.

In the year to August 1990 earnings a share rose from 106c to 123c, while dividends jumped nearly 18 percent to 40c.

At around R8.50 a share, Gencor's price-earnings ratio is only seven, while the dividend yield of 4.7 percent is well above the mining sector average.

These returns are even more attractive for the foreign investor who can buy Gencor on a PE of less than five through the financial rand market, says Laing and Cruikshank.

The discount to net asset value has narrowed from 46 percent to 23 percent.

Gencor is likely to encounter a "tight year," cautions Laing and Cruikshank.

Metal prices are expected to weaken in dollar terms, while the rand is likely to remain relatively strong because of the Reserve Bank's tight monetary policy. Cost inflation could be "well into double figures."

Laing and Cruikshank expects Gengold, Impala Platinum, Trans Natal, Sappi and Malbak to maintain their level of earnings, but Samancor will be hit by a downturn in demand for manganese.
Tiger Wheels rolls faster

TIGER WHEELS is set for further growth in the current year after increasing its retail effort and doubled production capacity at its wheel factory in Beaufort, north of Pretoria.

In the year to June, exports grew for the fourth consecutive year. Tiger’s alloy wheels are sold in seven countries in the main regions of the world.

Chairman and chief executive Eddy Kritzman says most divisions are budgeting for increased earnings, although he is aware that rising fuel prices could depress the motor industry worldwide.

Tiger Wheels intends to open three company-owned stores this year. The company owns six stores and supplies seven franchised ones.

In the past year, turnover rose by 26% to R152-million and attributable profit by 17% to R3.4-million.

Calitz does not believe there will be a unitary rand in any hurry, suggesting potential for the finrand to weaken again and for affected stores to receive a small boost.

Falling shocks from the Persian Gulf crisis started, invest-
Tiger Wheels becomes a roaring success story

TYRE and wheel group Tiger Wheels has shown significant export growth for the fourth consecutive year, with the group's wheels being sold on a regular basis in Western Europe, North America and South-East Asia, chairman Eddie Keizan said in the latest annual report.

Tiger Wheels has also doubled potential wheel production at its Babaleyi factory, where capital expenditure for the two years 1989-1991 will amount to almost R5m.

Overcoming a slump in the spare parts and accessory industry, the group posted a 17% increase in attributable profits to R3,4m (R3,2m) on the back of a 26% boost in turnover R31,7m (R41,2m).

Keizan said the group's retail division expanded with the addition of three company-owned Tiger Wheel & Tyre retail stores in Port Elizabeth, Boksburg and Pretoria.

The company now has a nationwide network of six of its own stores and seven franchised stores.

"The key focus of the year has been the growth of the retail activities as well as growth in both capacity and capability of the Babaleyi wheel factory."

Keizan reported that the offshore tyre and wheel business in which the group has an investment achieved meaningful sales growth in tough markets. Despite a small loss situation for the year, it would contribute to the bottom line in due course.
Rubber hopes

By DON ROBERTSON

KARBOCHEM, a Sentracem subsidiary, is investigating the manufacture of a highly refined form of butadiene rubber at its under-used Newcastle plant.

In the past, this quality of butadiene rubber, made in only two other countries, has been imported.

Part of the plant will be modified at a cost of between R16-million and R19-million in the second quarter of next year and production could start early in 1992.

When full production three years later, about 30,000 tons of rubber will be available for export. It could earn about R30-million at today's prices, says managing director Ben Schoeman.

Production will be about 36,000 tons of which about 12,000 will be used in SA.

The Newcastle plant has not been fully used since polyisoprene rubber production was stopped this year. Production had been ended because of a sharp drop in the price of natural rubber, which is an essential component.

Polyisoprene rubber is made from a synthetic polyisoprene rubber. SA synthetic rubber prices were based on natural rubber and this section of the plant became unprofitable.

Tyre manufacturers have tested the technical specifications of the product and have indicated that they will support it if it is competitive. It can also be used in the manufacture of industrial rubber products.

Mr Schoeman says: "Tests in Europe have convinced us that this rubber will be ideal for SA use and export. It is so versatile that it could replace virtually any other butadiene rubber used in tyre manufacturing."

Overall market this week
Rubber component manufacturer Wayne Manufacturing (formerly Phoenix Rubber) performed well above expectations in the past year and should achieve attractive earnings growth in the current year.

A highlight in financial 1990 was the acquisition by Phoenix Rubber of Wayne's assets from listed parent Consu and the subsequent change of name of the group from Phoenix Rubber to Wayne Manufacturing.

In the latest annual report, chairman Robert Feinblum says the acquisition has proved to be worthwhile despite the fact that the expected synergies are taking longer to achieve than originally anticipated.

Mr Feinblum is extremely optimistic about the year ahead.

He says the focus will be on core businesses and the group is well placed to aggressively expand its product ranges.

Wayne Manufacturing, 85 percent owned by Consu, is a specialist manufacturer of rubber and PVC moulded and extruded products for the agricultural, building, footwear, mining and motor industries.

In the year to June, group turnover grew more than five-fold from R21.4 million to R106.8 million.

Despite a sharp rise in net interest expense from less than R300,000 to R2.2 million, pre-tax profit quadrupled from R2.8 million to R10.6 million.

A significant decline in the effective tax rate from 59.6 percent to 25.2 percent resulted in attributable profit rising to R7.5 million, nearly seven times greater than R1.2 million in the previous year.

The strength of the balance sheet has improved with gearing down from 27 percent a year ago to a negligible 4 percent.

Net asset value has more than doubled from $4.3c to $5.3c.

These results are due to shareholders' equity increasing by R55 million to R60 million.

Wayne, priced at 55c, is trading on a price earnings ratio of 4.2 and provides an attractive dividend yield of 9.5 percent.

In view of the attractive growth potential for financial 1991, the share appears worth investing in at its current price level.

Comment: Wayne's share price collapsed from 110c in the last quarter of 1989 to its current level of 55c. The downward trend remains intact but above 80c will signal a trend reversal.
Tax takes a big bite of Darmag’s profits

Ciskeian rubber and plastics producer Darmag posted reduced interim earnings for the six months ended September after a hefty increase in its tax bill.

The group’s 42% boost in pre-tax profit to R1,1m (R771,000) was transformed by a R110,000 tax bill (previously a R357,000 tax credit) into a 13% decline in attributable earnings of R969,000 (R1,14m) or 4,5c (5,2c) a share.

Directors said profitability had improved mainly as a result of attention to cost saving and an improved performance in the plastics division.

Turnover showed a slender 5% increase to R14m (R13,4m).

An interim dividend was not declared although directors said tight control on capital spending during a period of increasing financing costs had stabilised the previously deteriorating cash position.

More demand

The group’s ability to resume dividend payments would be reviewed at the end of the year, the directors said.

Darmag reported significantly increased demand for its plastic products as the division took advantage of the previous year’s investment in new equipment moulds and design facilities to obtain additional business and increase plant utilisation.

Turnover in the rubber division was maintained by improved sales of rubber battery products coupled with the discontinuance of low margin products and reduction in overheads.

New entrants into the battery separator business depressed group performance in this sector.

The group expects second half performance to be similar to that of the first half.
Start-up costs of three new retail outlets, under-performance in the group’s Baballegi wheel factory, and economic downturn significantly slowed Tiger Wheels’ performance last year. EPS grew at a compound rate of 60% over the past three years but in the 1990 year the increase was only 8%.

Profitability in the manufacturing division — an important contributor to earnings — came under pressure on several fronts. A price difference between domestic and world market prices for ingot aluminium has led to cheap imports, which have squeezed margins. Problems also arose from the two-week stayaway during March in Bophuthatswana.

Given the uncertainty caused by the Gulf crisis, Tiger’s management is not confident.

The group will see any rise in earnings this year. With the local OE market for aluminium alloy wheels stagnant, near-term growth is likely to come from local retail activities and exports. Export performance should help compensate for a reduced domestic demand.

The R662 000 investment in an overseas wholesale tyre distribution business has not yet produced a profit since start-up in 1988.

Management says that the strong turnover growth will move down to the bottom line in

The earnings multiple of 4.7 on the current price is in line with the motor sector average. Price appreciation is unlikely until conditions improve.
BTR, the successful British conglomerate, would be better advised to invest more in South Africa than to contemplate the sale of its 52% stake in BTR Dunlop SA.

That is the SA response to a statement by BTR chairman Sir Owen Green that the conglomerate is considering disposing of some of its "mature" investments.

BTR specialises in buying troubled companies, nursing them back to health or selling off assets to increase shareholders' wealth.

Sir Owen says: "We are more prepared to redefine our areas of interest. It is not sensible for us to move forward on such a broad front."

He also thinks there are many mature assets which could be turned into cash. That has raised eyebrows in SA.

BTR Dunlop managing director Clive Hooper is not aware of any disposal plans by BTR. Dozens

Mr Hooper says: "I do know that they have in mind to go public in the United States where several companies are 100% owned. I don't think we are affected."

BTR Dunlop spokesmen say BTR has dozens of interests worldwide that would make better sale prospects. They say the SA company is on a fast growth track that should last several years.

BTR Dunlop has zero borrowings and a R160-million expansion project should soon bear fruit.

Dunlop has 25% of the SA tyre market and is known to be interested in buying rivals. It was prevented from contesting the bid by Anglovaal's Consol for Goodyear only by the reluctance of the US parent to let it have its tyre technology.

Dunlop could well make approaches to Federale, Volslebeggings, 100% controller of Firestone.

Several years before the big disinvestment apace, Dunlop had reduced its stake from 78% to 52%, permitting several SA institutions to increase their stakes. There were eager buyers in 1987 on hopes of a sellout that never came.

BTR took control of troubled Dunlop in the UK three years ago. Although Dunlop International was an underperformer, BTR management recognised the brilliance of Dunlop SA's management under chairman Hooper.

Dunlop was put in charge after Dunlop SA and BTR SA merged. Dunlop SA acquired BTR's factory at Howick and its other assets. BTR UK has hung tough in spite of violent and persistent industrial relations at the Howick plant.

After good results and an impressive presentation to the Investment Analysts Society in August, the price jumped from 1.85c to 2.25c since October.

Consumer

BTR Dunlop has done outstandingly. Operating surplus rose by 34% on a 16% increase in turnover for the six months to June 30. Earnings a share shot up by 35% to 1.68c a share in contrast with many weak performances in the industrial sector.

The company makes and markets industrial and engineering products which constitute 40% of turnover, automotive products 28% and consumer products 12%.

BTR Dunlop's market capitalisation is R46-million. BTR could theoretically raise at least R260.8-million for its 52% stake. That would amount to R243-million through the financial rand.

The BTR Dunlop dividend this year will be worth slightly less than 24-million to BTR.

By DIRK TIEMANN

BTR is urged to invest not sell

Clive Hooper: Fast growth performer, BTR management has recognised the brilliance of Dunlop SA's management under chairman Hooper.
MANUF.  —  RUBBER PRODUCTS

1991
Rainbow buys 50% stake in Premier's Epol

JOHANNESBURG. — Rainbow Chicken has not only acquired Premier Group’s interests in its Bonny Bird broiler operations, it has also purchased a 50% stake in Premier’s Epol Animal Feeds.

Rainbow and Premier will participate in Rainbow’s R237m feed mill expansion, an announcement today says.

Rainbow is to acquire Premier’s 50% interest in Bonny Bird Farms, Bokomo and Sacco for an undisclosed amount. Premier was left with a 50% holding in Bonny Bird when it merged its broiler activities with those of Bokomo and Sacco.

The combined market share of Rainbow (about 35%) and Bonny Bird (about 18.6%) would leave Rainbow with over 50% of the chicken industry.

Analysts estimated Bonny Bird would be worth about R378m, including debt. However, the acquisition price was expected to exceed this amount.

It has also been agreed in principle that Rainbow will acquire 50% of the shareholders’ interest and management control in Premier’s Epol Animal Feeds.

Sources said the acquisition would have to be funded through a rights issue, and Rainbow might use the opportunity to take up more of the Methven family’s share if they did not follow their rights — Methven Holdings has a big holding in Rainbow.
Wheel and tyre makers set to ride out recession

WHILE most vehicle manufacturers seem set to remain in neutral gear this year, manufacturers of wheels and tyres are geared to ride out the recession, analysts say.

Key market players believe the markets for wheels and tyres will continue to grow next year, in spite of the no-growth scenario predicted for new vehicle sales in 1991.

Analysts say the strong after-market for tyres will strengthen next year as motorists are now extending the life span of their vehicles in the light of rapidly increasing vehicle prices.

Vehicles in SA are now expected to last seven to eight years, which means a set of tyres on average will be replaced at least four times during a car's lifetime.

Trencor, which owns 21% of Contrend which incorporates Tycon (formerly Goodyear), FSI subsidiary Gentyre and BTR Dunlop have been tipped by analysts as

MARC HASENFUSS

strong market performers next year.

Gentyre and Dunlop shares did not perform to expectations last year after investor confidence was knocked by rumours of a supply of cheaper imported tyres.

Expensive

Last year Trencor's tyre division made a significant contribution to its R794,6m turnover, while Gentyre posted a 40% increase in earnings to R43,5m (R31m) for the year to December 1990. BTR Dunlop boosted interim earnings 35% to 162c (120c) for the six months end-June 1990.

The after-market for alloy wheels, although more expensive to manufacture than steel wheels due to a cost penalty, has grown considerably since its humble start a decade ago.

Recessionary conditions have not affected the sales growth of alloy wheels.

Analysts said the down-buying trend in cars has ironically resulted in increased interest in alloy wheels which, as they are seen as a symbol of affluence, are used to upgrade basic model vehicles.

A number of luxury cars manufactured in SA already have alloy wheels as a standard feature.

Local manufacturer and distributor of alloy wheels, Tiger Wheels, could soon woo investors looking for potential shares outside the Blue Chip range, analysts say. Tiger outdistanced the economic slump showing a 17% increase in attributable profits to R3,4m (R2,5m).

Last week AAF, a London-listed subsidiary of W & A Investments, acquired a UK alloy wheel manufacturer and distributor, the Wheels Business. Despite Wheels Business posting a loss of £232 000 for the year ended April 1990, analysts said it was an acquisition that would prove its potential in a few years.
Dunlop results are still full of bounce

Dunlop manufactures and markets sporting goods, carpets, vinyl flooring, mattresses, locking systems and rail fasteners.

Attributable profit was boosted to R87.5m (R72.5m) for the year to end-December 1998, on the back of an 11% increase in turnover to R700.8m (R631.8m).

With an increased number of shares in issue earnings a share increased 20% to 572c (310c). A final dividend of 105c (90c) was declared, increasing the total for the year by 18% to 165c (140c), covered 2.3 (2.3) times.

The pre-tax profit increased 21% to R134.2m (R110.9m).

Hooper reported that the group had spent R34m on capital expenditure during the year under review, which was part of an announced R100m three-year expansion programme.

The group's wholly owned Dunlop tyre subsidiary has an estimated 25% sales share in the local tyre market.

While the group's tax rate remained almost the same as last year, this would gradually increase as capital expenditure allowances diminished, Hooper said.

He said that although finance charges increased because of higher net current assets worth R130.8m (R103.1m), improvements in working capital by year end had resulted in a cash balance of R5.7m.

Hooper said the group expected 1991 to be a year of consolidation due to the static growth foreseen in SA and the possible effects of recessionary conditions in major world economies.

Lisa Lindstrom
BTR Dunlop performance lifted
by productivity improvements

By Jabulani Shukukhane

Continued improvement in productivity and operational efficiency helped boost BTR Dunlop's performance for the year to December, with earnings up 20 percent to R372c (310c) on a slightly enlarged share base.

A final dividend of 105c (90c) has been declared, making a total distribution of 165c (140c), which is 2.3 times covered (2.2).

Since the merger of the operations of BTR and Dunlop in 1986, operating margins of the combined operations have shown improvement thanks to group emphasis on improving productivity and operational efficiency.

From 10.1 percent in 1986, operating margins stood at 19 percent in the year to December 1990.

Major contributors to group turnover and profits were the industrial division, which in financial 1989 contributed 49 percent of sales and 45 percent of trading profit, and the motor division with 39 percent of sales and 45 percent of trading profit.

The two divisions have been affected by the slowdown in the economy. New vehicle sales were down five percent last year, while the mining industry has been cutting back on spending.

The directors say 1991 will be a year of consolidation because of the no-growth situation foreseen in the local economy and the possible effects of recession in major world economies.

In the review period, sales increased 11 percent to R700.8 million from R621.8 million.

This was achieved despite a recession in the building industry, a five percent reduction in vehicle sales and cutbacks in expenditure by the mining industry.

However, the industrial products division benefited from winning the contract for 43 kilometres of steelcord belt, which will be used in a new coal transport installation.

By maintaining throughout the year the higher operating margins achieved in the second half of financial 1989, the group increased trading profit by 21 percent to R134.2 million (R110.9 million).

This translated into operating margins of 19 percent from 17.8 percent.

Because of higher net current assets at R130.8 million (R108.1 million), finance charges more than doubled to R18.8 million (R4 million).

But an improvement in working capital by year-end resulted in a positive cash balance of R4.7 million, compared with borrowings of R60.0 million in 1989.

The effective tax rate was about the same as 1989, but the directors warn that as capex allowances diminish, the rate will gradually rise over the following year.

The tax charge rose to R77.5 million from R44.4 million, leaving attributable profit up 21 percent at R77.5 million (R62.5 million).
Tyre sales push
Consol profits up

CONSOL, Anglovan's packaging and rubber subsidiary, has posted a 31% rise in attributable profits in the six months to December, with results boosted by its tyre businesses.

Attributable earnings of R58.6m (R45m) or 41.9c (39.3c) a share, followed earnings growth of 48% in the year to end-June.

Turnover improved 6% to R1bn (R632m) largely because of growth in the rubber sector. Tyre retreading and distribution subsidiary Treadco was only merged into the group from January 1990 and therefore did not contribute in the previous comparable period.

In addition, Tycon (formerly Goodyear) had experienced an 11-week strike during the previous interium period.

Group MD Fiet Neehling says both Tycon and Treadco achieved good volume growth in the passenger tyre market. However, adverse economic conditions affected sales of commercial vehicle tyres.

Turnover of Consol's packaging sector rose 13% with volume growth experienced in all divisions, except glass tableware. Its turnover was affected by the disposal of its flexible plastics operations in the second half of the previous year.

The packaging operations suffered from higher fuel and energy costs and labour instability, said Neehling.

In addition, adverse economic conditions resulted in shorter production runs, and the glass division experienced production problems because of the introduction of new manufacturing technology at the Clayville factory.

Consol's operating profit rose 61% to R141m (R87.5m). With net financing costs at a similar level to the previous year, pre-tax profit rose 70%.

The tax rate jumped to 45.1% (37%) largely because of lower capital expenditure and a decrease of the wear and tear allowance on plant and machinery in the year of acquisition. Taxed profits were 48% higher at R71.6m.

Consol's capex for the half-year fell to R22.8m (R45.8m) and a further R11m (R54m) has been authorised.

Notwithstanding the relatively soft market conditions and the unsettled social environment, an earnings improvement is anticipated for the full year.

However, Neehling says the rate of increase will not equal that achieved in the period under review, as the first six months of the previous year had included the adverse effect of the Tycon strike.

Graphic: FROM KRUGCH  Source: JSE
Consol's figures for the six months to December were boosted by two exceptional factors. As these will not affect second-half results, a more pedestrian performance is expected for the full year.

Interim earnings were up 51 percent to R1.5c (73,3c) a share, from which a dividend of 46c (33c) will be paid.

Turnover shot up 65 percent to R1,948 billion (R631.7 million) and operating profit rose 61 percent to R141 million (R87.5 million).

The sharp hike in turnover is attributable to the group's rubber division, where turnover almost trebled to R555.5 million (R120.6 million).

By contrast, sales at the packaging division were up only 12 percent to R483.4 million (R431.2 million).

Management says that turnover in the packaging division was adversely affected by the disposal of two operations in the six months to June '90.

It says there was volume growth in all divisions except glass tableware.

Reason for the extent of the increase in turnover at the rubber division was that the previous year's figures did not include Tredcor - the tyre re-treading and distribution operation, which was only merged into the group from January '90.

In addition, Tycon (formerly Goodyear) was hit by an 11-week strike in the first half of financial '90. While this had some impact on turnover, it had a much greater effect on profit.

The rubber division's operating profit soared from R7.1 million to R33.5 million, compared with the 6.9 percent increase at the packaging division.

This meant that the rubber division accounted for 38 percent of group operating profit in the '91 interim, compared with eight percent at the previous interim.

Rubber provided 54 percent of group sales in the review interim, compared with 32 percent in the first half of '90.

The figures reflect the much higher margins enjoyed by the packaging division - 18 percent, against the 9.5 percent at rubber. The overall margin of 13.5 percent is slightly down on the previous year's 13.3 percent.

Net finance costs were virtually unchanged. Pre-tax profit was up 70 percent to R130.4 million (R76.5 million).

The tax rate was up to 45 percent from 37 percent, which meant that the taxed profit increase was restricted to 48 percent - up from R48.3 million to R71.5 million.

The higher tax rate is attributed to the reduced level of capex and a decrease of the wear-and-tear allowance on plant and machinery in the year of acquisition from 50 percent to 20 percent.

As a result of the Tredcor merger, the review figures include earnings attributable to outside shareholders of R9.4 million. This left attributable earnings of R58.8 million (R45 million).

The second half is expected to see a continuation of the soft market conditions and the unsettled social environment.

The directors say: "An earnings improvement is expected for the full year, although the rate of increase will not equal that achieved in the six months under review."
Trencor earnings grow despite lower turnover

CAPE TOWN — Trencor has reported a 23% growth in earnings a share to 254c for the six months to end December, in spite of difficult trading conditions in domestic and export markets.

Turnover declined to R390m from R396m as a result of a merger within the group which made the turnover figure comparable with that of the previous interim period, executive chairman Neil Jowell said yesterday.

The merger of Tycon (formerly Goodyear), a manufacturer and Tredecor, a retailer, into Centref in January 1999 had resulted in a change in the mix of manufacturing and retail trading which boosted profits but subdued turnover, Jowell said.

The effect of the merger on turnover at the end of the last financial year had not been as noticeable because other factors had contributed to the increase in turnover, he said.

Income from the group’s interests in manufacturing, transport, trading, exporting and tyres, rose by 15% to R61m from a high profit base established last year.

Interest charges rose by 66% to R16m as a result of an increase in interest-bearing debt which pushed the interest-bearing debt to equity percentage from 31% to 37%.

The tax bill declined from R16m to R12m, as foreign operations in low tax jurisdictions continued to contribute to a lower overall tax rate.

These factors resulted in a 20% increase in attributable earnings to R36m.

An interim dividend of 35c (30c) was declared.

Jowell said the group was still expecting year-end earnings to exceed 1998’s record 572c a share, in spite of the difficult trading conditions.

“Our South African operations are labouring under the weight of the recession and container exports are under pressure largely from declining international prices caused by increased production capacity in many parts of the world,” he said.

Mobile Industries, which has a 48% holding in Trencor reported a satisfactory performance from its finance and leasing subsidiary, Mobile Acceptances.

It posted attributable income of R17.8m (R14.6m) for the half-year.

A dividend of 62c (76c) a share declared earlier this month arose from earnings of 63c (51.5c).
Trencor lifts 22 percent earnings by

Finance Staff

Trencor has reported a 22 percent advance in earnings a share to 25c (20c) for the six months to December.

Income from interests in manufacturing, transport, trading, exporting and tyres rose to R61 million (R54 million).

There was a 66 percent rise in the interest bill from R6 million to R10 million.

Attributable income after outside shareholders' interest of R3 million was R36 million (R30 million).

An interim dividend of 35c (30c) a share has been declared.

Executive chairman Neil Jowell says the R390 million turnover is not comparable with the previous figure because the merger of Tycon (formerly Goodyear) and Tredcor to form Contred resulted in a significant change in the mix of manufacturing and retail trading.

The group is still forecasting a rise in earnings for the year over 1990's record 37c a share, despite difficult conditions both domestically and in export markets.

Mr Jowell says that while interest-bearing debt rose to R107 million (R79 million), liquidity ratios remain satisfactory.
Wayne on track after merger

THE merger of Wayne Manufacturing (previously Wayne Rubber) with Phoenix last year resulted in Wayne's attributable earnings rising 26.5% in the six months to end-December 1990.

Specialist rubber manufacturer Wayne was on track to increase its earnings in financial 1991, chairman Robert Feinblum said in a statement yesterday.

He said the group's two divisions were "well positioned to take advantage of the markets in which they operate".

Attributable earnings rose by 26.5% to R3,39m (R2,6m) on a 9% increase in turnover to R62,6m (R57,8m).

Operating income rose 1.8% to R5,1m (R5,3m).

Earnings a share rose by 26% to 5,42c (4,29c) and a higher interim dividend of 1,75c a share (1,5c) has been declared.

Feinblum said the refocus had resulted in more efficient use of assets and all divisions in the group "have contributed handsomely to the increase in attributable earnings". He added that the real benefits of the merger and subsequent rationalisation were now emerging and reflected the group's refocus onto its core business.

On the balance sheet, gearing improved substantially with current liabilities falling by 35% to R14,89m (R21,49m).

Feinblum said the group was investigating a number of new capital projects which, "if they come to fruition, will have the effect of further enhancing shareholder wealth".

In the light of the group's clearer focus and the continued demand for its products, Feinblum forecast higher earnings in the second half of the current financial year than those achieved during the same period last year.
TRENCH/MOBILE 22/2/91
CHANGED MIX

Trench’s latest interim figures show a drop in turnover, but this reflects deals done during the previous year rather than the trading performance.

The sales mix changed after the tyre interests of Trench were merged with Goodyear to form Contrec early last year. The adjusted figures would show turnover to have increased over the previous interim. As Goodyear is a manufacturer, its margins are higher and its sales figures are lower than those for the retailing operations.

EPS have grown by 23%, which is impressive in view of the high base set during the previous year. Even so, pre-interest was up by only 13%, indicating 1991 will be a slower year. There are several reasons for taking this view.

Firstly, the SA economy is in recession and, as chairman Neil Jowell puts it, “there is a fairly marked decline in demand, especially in the engineering business, where the requirement for trailers has tailed off substantially.”

Secondly, Jowell says: “Though exports performed reasonably and forward orders continue, PAL...

Fox 22/2/91

are still satisfactory, demand in this sector is certainly softening. The largest container manufacturers in the world are in Korea. They are now quoting very short delivery times and reduced prices because of excess capacity brought about by the reduction in world trade.”

A further factor is that the rand has been relatively stable for many months, unlike the trend in 1989 when the currency was depreciating. The rand’s depreciation did much to boost Trench’s export receipts.

Nevertheless, the group’s foreign operations have continued to trade satisfactorily. The value of their contribution is enhanced by the fact that they trade in areas where taxes are low. Effects of this are evident in the group’s effective tax rate, which has declined to 23% from the previous year’s 33%.

Jowell, as usual, is conservative when talking about the future. He sees a further softening in overall demand, but says Trench will record “maybe just real growth in EPS. My guess is that EPS will be 20% ahead for the full year.”

If achieved, this would put prospective EPS up to 69c which, at the price of R2.55, give an earnings multiple of 8. For a share that has developed a blue chip reputation, this looks good value in today’s market. But it should not be expected that the large leaps in earnings achieved in the past will continue.

Mobile Industries, which holds 48% of Trench, posted EPS of 6c (61.6c) and an interim dividend of 8.2c (7.0c). Gerald Hirszen
Tycoon problems were no longer an issue. Also, the economic climate is not conducive to growth. As the directors state: "Relatively soft market conditions and an unsettled social environment are expected to continue for the balance of the financial year. An earnings improvement is anticipated for the full year, though the rate of increase will not equal that achieved in the half-year under review."

At 2 625c, the share stands on a demanding rating, with the dividend yield at 1.7% and the p/e at 16.6, which largely discounts the current performance.
World slump, static growth make BTR Dunlop cautious

THE static growth foreseen for SA and the possible effects of a world recession make 1991 a year of consolidation for the diversified BTR Dunlop group, says Chairman Dru Gnodde in his annual review.

He said the group saw its growth opportunities in manufacturing and marketing, especially where the technological and capital content is significant.

MD Clive Hooper was also cautious about the months ahead. He said there would be limited growth in the tyre division in the next financial year.

However, new product lines had been developed by Dunlopillo in the bedding and furniture markets and would provide a platform for further growth this year.

Hooper said with the prospect of little growth in BTR Dunlop's industrial products division, the introduction of new products and further productivity improvements would be stressed.

The group's rubber division has a contract for rail fasteners with the Botswana Railway for 1991.

No improvement is expected in the flooring division until interest rates are lowered. Last year greater productivity and efficiency in the division helped offset the impact of lower contract and domestic flooring markets.

BTR Dunlop's recent performance justified calls for its holding company, the British conglomerate BTR, not to dispose of its 52% stake in the group after chairman Sir Owen Green hinted at the disposal of some of its "mature investments." The group reported an inflation-busting 20% rise in earnings to R273 (310c) for the year to end December.

The number of people employed by the group dropped off slightly last year to 5,991 compared to 5,991 the year before.

The 1986 merger of the local operations of BTR and Dunlop continues to bear fruit. In financial 1990 trading margins widened again, from 17.6% to 19.1%, thanks to stringent control of overheads. The question is: how much longer can efficiencies improve in the face of slackening demand? Sales value rose 11%, though volumes fell because of the recession in the building industry and a 5% drop in new vehicle sales in 1990. MD Clive Hooper says that while the mining industry had cutbacks in the second half, the industrial products division benefitted from the contract for 42 km steel cord belt for a coal transport installation.

This helped to boost the engineering and industrial division’s trading profit by 26% to R60.4m, past the motor division’s R59.1m. The consumer division’s R14.7m pushed total trading profit to R134.2m. Though financing costs more than doubled to R8.8m, it is low in comparison to trading profit.

The effective tax rate fell by two percentage points to 30%, helping attributable income to rise by 20.7%. Since the merger attributable earnings have grown by 44.8% compound annually.

The group started some time ago to adjust its product range to market developments. It embarked on a R110m capex programme, of which R34m was spent last year, to make radial steel tyres for cars and trucks.

Hooper notes that the SA tyre industry had reasonable growth in 1990 as growth in the replacement market exceeded the decline in the original equipment market, which was

COMPANIES

in line with the fall in new vehicle sales.
Management expects static growth locally and the international recession is expected to have an impact. Hooper says this year will be a period of consolidation.

The share price rose from R8 to R28.50 over the past three years. On a 7.7 earnings multiple it’s pretty fully priced.

Richard Stiebel
A tax holiday keeps Gentyre rolling along

By JUliE WALKER

112c, four times covered by earnings.

Mr Liebesman paid credit to Gentyre's staff and management, whom he said had controlled assets well. He describes it as a wonderful company.

Gentyre is part of the W&A group, control of which was bought by Mr Liebesman's FSI Corporation in 1987. At that time the attributable earnings of W&A were R37-million. Four years later, the profit attributable from 67%-held Gentyre is R44-million.

These figures fully vindicate FSI's purchase of W&A at a price which looked high at the time, just before the collapse of world bourses in October 1987.

Under new ownership, Gentyre paid more attention to the switch from textile tyres to steel-belt tyres.

Management has installed new facilities at what Mr Liebesman describes as reasonable cost, and the benefits should be felt this year.

The Continental range will be expanded to cater for trucks. The brand has won a high slice of the passenger vehicle market.

Mr Liebesman is hopeful that tyre exports will grow now that capacity constraints have begun to ease. The industrial division is also expected to improve, but so much depends on the mining industry.

Given stable operating conditions the directors expect an improvement in earnings a share this year.

JEFF LIEBESMAN

GENERAL TYRE paid less than one percent of the tax it paid last year due to the recognition of permanent differences arising from the 1989 restructuring.

This holiday helped the company to show a 56% rise in attributable earnings for the year to December 1990.

Turnover at the tyre and industrial rubber product manufacturer climbed by 15% to R500-million in spite of the economic downturn.

Operating profit margin came down from 13.9% to 12.5%, due mainly to cutbacks by customers for industrial products.

A loss-making motor components company also required capital.

But director Jeff Liebesman says demand for new product Continental Tyres was so high it could not be fully met.

A decision to discontinue Uniroyal was taken because there was no longer a place in the market for the brand.

The sturdy balance sheet enabled Gentyre to earn R5-million in interest, which helped to push pre-tax profit 4% higher to R69-million.

 Barely R200 000 was paid in tax, compared with R23-million in 1989. Earnings a share reached 44c and the dividend was lifted 20% to
Demand for tyres keeps Gentyre in the fast lane

DEFYING the weakening economy, Gentyre Industries' earnings growth continued to accelerate on the back of strong tyre and industrial rubber sales.

Earnings increased 38% to R68,6m (R45,8m) or 42c (35c) a share for the year to end December 1990.

Gentyre's results since 1987 show strong growth levels of 28%, 41%, 40% and now 38%, and Gentyre chairman Terry Rolfe said the group was looking at further growth in 1991.

Turnover increased 15% to R520m (R452m). A final dividend of 57c was declared lifting the total payout to 112c (98c), covered 4 (3) times.

Rolfe said at the weekend that declines were seen in the market for heavy service, off-road agricultural tyres and for the original equipment sector of the passenger and light commercial vehicle (LCV) markets.

However, these declines were more than offset by growth in the car and LCV replacement markets.

"Demand was particularly strong for Continental brand tyres, exceeding the capacity of our Port Elizabeth factory."

Rolfe said Gentyre's industrial division was effective in countering sharp cutbacks in expenditure by customers, mainly in the mining industry, and managed an increase in profits despite reduced margins.

This led to tighter operating margins for the group at 12.3% (14%).

Ongoing management of working capital helped maintain a high level of liquidity at R36m (R35m), giving rise to a 53% increase in interest received to R1m (R0.3m) for the period under review.

Rolfe said the effective tax rate was reduced by permanent differences arising from the 1989 restructuring of the group being recognized in the income statement of the period in which they arise.

Tax was brought down to R285,000 from R323m in the previous year.

Rolfe said "benefits are expected to start being felt from the capital expenditure programme undertaken over the past two years, and capacity constraints at the tyre factory should start to ease."

The industrial division was expected to show further profit improvements in 1991, he said.

Given stable operating conditions, the directors expected an improvement in earnings per share for 1991.

Ahead of the strong results Gentyre A shares climbed 50c to a 334c high, while Gentyre B gained 20c to a R23.50 high last week. Both shares are well above their respective lows of R16.50 and R16.25 last November.
Tiger Wheels hits profits pothole

FAULTY raw materials supplied to tyre and wheel group Tiger Wheels reduced earnings to 1.1c (6.1c) a share in the six months to end-December.

CE Eddie Kelzam yesterday attributed the decline in profits to faulty raw materials supplied to the aluminium wheel manufacturing plant which cost the company R2m in lost contracts and sales.

The company had since taken steps to minimise a repeat of the situation and was considering its rights of action against suppliers, Kelzam said in a statement.

"If the problem had not arisen, earnings would have been almost on a par with the first half of last year," he said.

The situation had been resolved and Tiger Wheels was back on track. "Wheel production increased from this month in line with new export orders, while the new wholly-owned Tiger Wheel and Tyre stores developed last year in Cape Town, Port Elizabeth, Boksburg and Pretoria are now all showing profits."

Earnings in the second half of the year were expected to be about 5c a share.

Turnover rose by 21% to R30.6m (R25.4m) but a massive hike in the interest bill to R755 000 (R1192 000) and an extraordinary item of R2m caused a 77.5% reduction in after tax profit to R42 000 (R17 7m).

Because of export incentives, decentralisation and new plant allowances, no tax was payable in the period under review. An amount of R133 000 was sliced off profits as the result of the loss of an associated company.

Quality standards at the wheel plant were maintained, but output diminished and production costs were higher as a result, he said.

Company policy dictates that no interim dividend be declared.
Acquisition gives scope for growth

INDUSTRIAL rubber and plastics group Wayne Manufacturing has acquired Cape-based Rubber Products & Mouldings for an undisclosed amount, a statement said yesterday.

Wayne Manufacturing executive chairman Robert Feinblum said the acquisition, effective from July this year, gave the group scope for further growth in turnover of about R23m. A substantial portion of this growth would be experienced in the 1989 financial year, he said.

Rubber Products & Mouldings, a major rubber moulding and extrusion manufacturer for the building and motor industry, will form part of subsidiary Wayne Rubber.

Feinblum said the acquisition would provide Wayne with a much needed production facility to supply Cape-based customers.

The additional capacity would also assist in a rationalisation of Wayne's operations, and improve its cost effectiveness.

Rubber Products & Mouldings would retain its retail outlets, using the Rubber Products & Mouldings name.

In line with group strategy to develop fully autonomous divisions throughout the country, a restructuring of Wayne sees the formation of Wayne Rubber Natal, Wayne Western Cape, Wayne Resin PE, Wayne Plastics Johannesburg, Phoenix Jacobs and Phoenix Apex.

Feinblum said benefits envisaged with the streamlining included regional production of all customer requirements and better utilisation of plant.

The Wayne Western Cape product range, which will include shoe components for holding company Consuh, will be complemented by existing products manufactured by Rubber Products & Mouldings.
Call for removal of tyre import controls

The Board of Trade and Industry (BTI) has called for the removal of the stringent import controls on tyres, a Department of Trade and Industry spokesman said yesterday.

The move is likely to encounter stiff resistance from the tyre industry. An industry spokesman said yesterday if import controls were lifted, severe pressure would be placed on local tyre manufacturers and there would be large-scale unemployment.

The quantitative import control prevents the large-scale importation of tyres into SA. Imported tyres would cost substantially less than tyres manufactured locally, motor industry sources said.

The tyre industry spokesman said the industry would come under pressure, not because local tyre manufacturers were uncompetitive but because they were forced to buy their raw materials locally at comparatively high prices.

The spokesman said although local manufacturers were reporting strong profit growth, much of the profit was put back into the business to ensure SA's tyres met international requirements.

BTI chairman Lawrence McCrystal said no representations had been received from local tyre manufacturers.

The department spokesman said no official decision had been taken.
Outlook for BTR better than average

BTR Dunlop's excellent track record is expected to be blotted by subdued performance this year.

Nonetheless, the group's financial strength and excellent management team are bound to ensure that results are satisfactory in the circumstances.

Not only is the economy in a severe recession, but major world economies are also looking depressed.

The BTR Dunlop group is involved in the manufacture and marketing of industrial, engineering, automotive and consumer products.

The focus is on products in which competitive efficiency requires a capital-intensive manufacturing process.

In the year to December, group turnover rose 11 percent from R631.8 million to R700.8 million.

In the annual report, managing director Clive Hooper attributed the decline in real sales to the recession in the building industry and a five percent reduction in new vehicle sales in 1990.

Due to the maintenance of the higher margins achieved in the second half of 1990, operating profit climbed 21 percent from R110.9 million to R134.3 million.

Interest expense more than doubled from R6 million to R12.8 million, which lowered the rise in pre-tax profit to 17 percent from R106.5 million to R125.4 million.

After a reduction in the effective tax rate from 32.1 percent to 30.2 percent and payment of the preference dividend, attributable profit increased 21 percent from R72.4 million to R87.4 million.

Mr Hooper says the effective tax rate is expected to increase gradually over the years to come as the capital expenditure allowances diminish.

Based on an increased number of shares in issue, earnings a share rose 20 percent from 310c to 372c.

The dividend for the year amounted to 165c, 18 percent higher than the previous year's 140c.

The balance sheet is exceptionally strong, with cash in hand exceeding total borrowings by more than R5 million.

Net asset value appreciated 18 percent over the year from R11.37 a share to R13.42.

BTR Dunlop, priced at R27.75, is trading on a price-earnings ratio of 7.5 and provides a dividend yield of 5.9 percent.

The outlook for the group is better than average and for this reason the share is worth accumulating and holding on to for at least two years.

COMMENT: BTR Dunlop's share price has performed remarkably well, having risen from less than 500c three years ago to its current level of R27.75.

The positive trend remains intact and will be threatened only if the price falls below R24.50.
11 organisations make up the
Motor Industries Federation of SA

Apart from the Tyre Dealers' Association (TDA), 10 other motor employer organisations are affiliated to the Motor Industries Federation of SA (MIF).

- **Samta** — the SA Motor Traders' Association — which represents the service station and non-franchise workshop industry.
- **TDA** — whose membership is only of the tyre retreading and retail industry.
- **Nada** — The National Automobile Dealers' Association — comprises franchise holders for new passenger and commercial vehicles.
- **Sadfa** — the SA Diesel Fuel Injection Association — comprises major diesel fuel injection establishments.
- **MCIDA** — Motorcycle Importers' and Dealers' Association — represents dealers in new and used motor cycles and repairs.
- **ACRA** — the Automotive Component Remanufacturers' Association — has a membership of clutch and brake component remanufacturers.
- **AEASA** or Automotive Engineers' Association of SA comprises engineering establishments that recondition internal combustion engines.
- **NAMTA** — the National Agricultural Machinery Trade Association — has a membership of dealers in agricultural machinery.
BTI urged to retain import controls on tyres

SOUTH African tyre manufacturers have urged the Board of Trade and Industry (BTI) to retain import controls on tyres until at least year end.

Last month the BTI called for the removal of the stringent quantitative controls on imported tyres.

SA Tyre Manufacturers' Conference spokesman Gert Fischer said yesterday the BTI had still not taken an official decision on the matter.

MARC HASENFUS

He said there were a number of problems in the tyre industry that needed to be dealt with before the import restrictions could be lifted. He said:

Fischer said the current overproduction of tyres locally, the pending change to the export incentive scheme under Phase VI of the local content programme and tariff structure adjustments for imported tyres needed to be addressed.
Gentyre expects to pull ahead

W & A Investment Corporation's strong-performing tyre and rubber subsidiary Gentyre Industries expects to increase earnings a share during 1991.

In the year to December 1990 Gentyre's earnings accelerated 58% to R69,6m (R43,6m) or 43c (29c) a share on the back of a 15% increase in turnover to R528m (R452m).

In his annual review, Gentyre chairman Terry Rolfe said the benefits of the group's capital expenditure over the last two years would begin to be felt in the current year.

Capacity constraints at the Port Elizabeth tyre factory would ease and opportunities existed for new products in Gentyre's Continental tyre range. In the past financial year demand for the group's passenger tyres exceeded supply.

Rolfe said Gentyre's industrial division was well positioned to take advantage of improvements in the economy. But there would be more rationalisation of the group's industrial and high-pressure hose activities.

Gentyre Automotive Components (formerly Total Motion Components) had proved a strategic acquisition, and Rolfe expected the reorganised division to make a contribution to profits this year.

**Concern**

The acquisition of Aerotech Hydraulics strengthened Gentyre's position in the market for hydraulic hose and fittings distribution and enabled the group to enter the automotive market, where considerable growth was anticipated.

Gentyre's newly appointed CEO Clive Tutton said the removal of import control on tyres in the foreseeable future was of grave concern to the industry, especially when SA's productivity levels were compared to countries which could become major exporters to this market.

Tutton said export opportunities were investigated last year and with the easing of capacity constraints, tyre exports were set to grow.

The optimistic expectations by Gentyre directors are in line with motor industry analysts' forecasts.

Analysts believe Gentyre's low tax rate will allow it to lift earnings this year. They said Gentyre's tyre sales could be severely eroded if import controls on tyres were lifted this year.

Gentyre's sound financial performances over the past five years initially failed to attract investor interest, but the share has moved up from its R18,75 low in November last year to a R25 high at the end of April this year. The shares were untraded yesterday at R23,50.
Gentyre expects higher earnings

JOHANNESBURG. — W & A Investment Corporation’s strong-performing Gentyre and rubber subsidiary Gentyre Industries expects to increase earnings a share in 1991.

In the year to December 1990 Gentyre’s earnings accelerated 35% to R68.8m (R45.6m) or 44c (30c) a share on the back of a 15% increase in turnover to R250m (R192m).

In his annual review, Gentyre chairman Terry Rolfe said the benefits of the group’s capital expenditure over the last two years would begin to be felt in the current year.

Capacity constraints at the Port Elizabeth tyre factory would ease and opportunities existed for new products in Gentyre’s Continental tyre range.

In the past financial year demand for the group’s passenger tyres exceeded supply.

Rolfe said Gentyre’s industrial division was well positioned to take advantage of improvements in the economy. But there would be more rationalisation of the group’s industrial and high-pressure hose activities. — Sapa

It is only the large tax break that takes Gentyre's 1990 results from mundane operating profit to outstanding attributable earnings. The question that should be considered, is whether the bottom-line performance can be ascribed to good management or to luck.

Since 1985, the group has demonstrated enviable growth. Operating profit has increased at a compound annual rate of 26.9%, but attributable earnings have leapt by an annual 53% over the period. In the 1990 year, EPS was up by 58%. Small wonder, then, that the share price has moved from 650c in October 1987 to the current R24.

But the reason attributable earnings balanced, despite the flat performance at operating level, was that no tax was payable in 1990. According to chairman T. Rolfe, substantial investment in export allowances have followed in the wake of the large, on-going capital investment programme.

During the year, R44.7m of the cash available from operating activities was used to update, renew, improve and acquire additional fixed assets; these showed a R27m — or 40% — increase.

Rolfe points to two strategic acquisitions — Aerotech Hydraulics in the hydraulic hose and fittings distribution area, and Gentyre Automotive Components (formerly Total Metbond Components) — which together absorbed about R10m of cash flow. The rest consisted of capital expenditure on the in-house machinery manufacture plant, and the machinery and equipment upgrade programme which, Rolfe says, will continue to absorb a major slice of cash flow for the foreseeable future.

The tyre division contributes 86% of group profit before interest and tax. In this segment, unit production increased by 3.5% over 1989 while tyre mass produced declined by 1.6%. This is because the passenger and light-heavy sectors of the market maintained sales momentum in 1990 while the heavy service, off-road and agricultural sectors declined. Much of the expenditure is aimed at increasing the present inadequate productivity, which is partly evidenced by the dramatic fall in margin.

Low productivity is not the only bugbear. Clive Tutton, MD of the tyre division, reckons the trends seen in the tyre market in 1990 are likely to continue this year "with, if anything, a further softening in the market overall". Inadequate volumes in the "heavy" sector will also affect margins, so it is a case of tightening management controls or facing further margin deterioration.

Despite a drastic cutback in the mining industry, particularly in the second half of the year, the industrial products division increased sales and profit. However, these were not enough to boost operating results materially and total operating profit edged upwards by only 1.3%.

Unquestionably, given the elasticity of demand in the tyre industry (consumers of all descriptions make do with their existing tyres for a longer period in bad times than they would do in a buoyant economy), the depressed economy is curbing tyre sales.

But the impact on the industry of the future removal of import controls is cause for concern. Profitability of the major players will be affected. There is, however, no clarity on the detail or the timing of this.

Rolfe says benefits of the capex programme of the past two years will begin to filter through this year. But, he says, growth of operating profit will depend on a derived demand which is affected by the economy, and the behaviour of the work force — a factor that has become less rather than more predictable. While he will not be drawn on specifics, he says that only minimal tax will be payable this year. EPS may show some nominal growth but is unlikely to come close to the inflation rate.

The immediate growth run appears to have ended. To ascribe the company's five-year record to luck rather than good management would be out of place. But, for the present, it is difficult to consider the share attractive.

African Life must rank as one of the more successful listings of recent years. Since the flotation on November 15, the price has increased from 130c to 210c; the company has continued its expansion and disclosed earnings and the dividend were ahead of those forecast in the prospectus.

This maintains a growth rate that has been high for some time. After rising last
SPECULATION is rife that Malbak's tyre distributor, Quality Tyre, is about to be sold to a major tyre manufacturer.

Analysts said tyre manufacturer Firestone would be the most likely buyer following last year's merger of Tycon (formerly Good-year) with Trecor and Long-mile's jointly owned tyre retailer Tredcor. Quality Tyres, the second-largest new tyre distributor and retreader in the country, is back in the black after being placed under liquidation.

Malbak executive chairman Grant Thomas said negotiations with various parties had been under way for some time, but no agreements had been reached yet.
Bid to break tyre industry deadlock fails

EMPLOYERS and unions in the tyre industry failed to resolve a deadlock in wage talks at a meeting of the newly formed Tyre Manufacturing Industrial Council in Port Elizabeth this week.

National Union of Metalworkers (Numsa) negotiator Les Kettleches said in a statement yesterday the parties had met in an effort to settle disputes over pay increases and conditions of employment.

Kettleches said Numsa – which has more than 8,000 members in the industry – declared a dispute with tyre industry employers early last month and decided to ballot its members after the union's third national congress on June 20.

The other union involved in tyre talks, the white Yster en Staal Myn-workersunie, also declared a dispute with the Tyre Manufacturers' Employers Association.

Employers offered between R1,10 an hour extra for unskilled workers and R1,25 for higher paid workers. Numsa has demanded a R1,50 across-the-board increase or 29%, whichever is the greater.
Trade in Gentyre may mean deal in the offing

MARC HASENFUSS

STRONG price rises last week in Gentyre Industries shares fuelled market rumours that holding company W & A Investments could be selling part of its 67% stake in a bid to reduce its debt burden.

Gentyre A and B shares have seen heavy trading recently, and have accelerated from R22 a week ago to close at highs of R29,50 and R28,50 respectively on Friday.

A Gentyre source said he was aware of negotiations taking place but would not disclose further details.

Analysts felt a deal was in the offing with the share looking overpriced and overtraded. Despite Gentyre's strong profit performance, the share did not warrant the surge in investor interest, they said, adding potential investors would be cautious as the group's zero tax rate could not be sustained for more than two years.

With the recognition of permanent differences arising from 1989's group restructuring, Gentyre's tax bill was reduced from R23m to a R203 000. This helped the group to boost earnings 88% to R8,8m (R4,3m) for the year to end-December.

Industry sources doubted whether W & A would relinquish its interest in the star performer.

However, one analyst said that if W & A intended reducing its heavy debt load, then "the jewels would have to be sold off because it is impossible to sell underperforming subsidiaries at the required price on the market today".

Ongoing strike hits supply of new tyres

By Helen Grange
Pretoria Bureau

A shortage of new tyres for certain passenger vehicles has resulted from an ongoing strike in the tyre industry, tyre companies said yesterday.

The three-week strike, coupled with the resumption of production in the car manufacturing industry last week after a lengthy work stoppage, means tyre companies are unable to meet the demand by car manufacturing plants which are working overtime to make up for lost production.

Talks to end the strike have been referred to mediation following a meeting at the weekend between the New Tyre Manufacturers Association, the National Union of Mineworkers of South Africa and the South African Iron and Steel Workers Union.

The strike at Firestone, Gentyre Industries and Tyrecon — formerly Goodyear — began on July 22.

Dunlop is unaffected, and according to a spokesman, the company is not experiencing any shortage.

"The Government's permission to allow imported tyres into the country is killing the local industry, which is overstocked at the moment," the spokesman said.

However, Gentyre (General Tyres) and Tyrecon (Goodyear) have reported that there is a shortage of tyres for certain passenger vehicles while larger tyres are in good stock.

Industry sources maintained that tyre shortages were far from being critical.
Mediators called in to resolve tyre strike

SHARON SOROUR
Labour Reporter

NEGOTIATIONS to end the three-week nationwide strike by about 5,000 workers in the tyre industry are set to continue today.

Mediators from the Independent Mediation Services of South Africa (Imssa) have been called in to resolve a stalemate between workers and employers over retrenchments and wage increases.

Hourly-paid workers at three companies — Tycon (formerly Goodyear), Gentyre Industries and Firestone — downed tools on July 22 over wages and working conditions.

Employers, represented by the New Tyre Manufacturers' Employers' Association, met officials from two union parties to the talks — the National Union of Metalworkers of South Africa (Numsa) and the South African Iron and Steel Workers' Union — at the Tyre Industrial Council in Port Elizabeth on Sunday.

Numsa spokesman Mr Les Kettledeus said serious efforts were being made to resolve the strike.

Firestone spokesman Mr Phillip Nel said about 1,200 workers from the company were involved.

He said workers were demanding a wage increase of R1,50 an hour. Employers were offering an increase of R1,35 an hour.

This was split into the higher of R1,50 or 13 percent now and an extra 10c in December linked to productivity.
Imports tread on BTR Dunlop

By Sven Länsche Apr 15 1991

The liberalisation of tyre imports has adversely affected the results of tyre manufacturer BTR Dunlop.

In the first half of this year earnings per share fell from 13c to 11c on the back of a three percent decline in sales to R325.4 million (R336.5 million). The interim dividend was maintained at 6c a share.

Managing director Clive Hooper says that imports of car and truck tyres have increased substantially as a result of the government's policy of liberalising imports.

"High levels of imported second-hand tyre casings for retreading further reduced the demand for locally manufactured replacement tyres," he says.

However, he says he would welcome the abolition of all import controls on tyres if it coincided with the abolition of import controls on industrial rubber products, as this would ensure competitiveness throughout the chain of manufacture.

The government had already announced its intention to withdraw the 27-year ban on importing two key raw materials for the industry and would also introduce new anti-dumping measures.

Mr Hooper says that apart from the competition from tyre imports, results continued to be depressed by the slowdown in the economy.

BTR's finance costs almost doubled in the first six months to R6.4 million (R2.8 million) reflecting a reduction in current liabilities and an increase in inventories. The group's three year R10 million capital expenditure programme was on schedule and would be completed over the next 12 months.
Imported tyres let the air out of Dunlop’s performance

THE easing of government’s restrictions on imported tyres deflated BTR Dunlop’s interim earnings in the six months to June 1991.

MD Clive Hooper said imports of car and truck tyres had ‘increased’ substantially because of the government’s policy of liberalizing imports.

Furthermore, large numbers of imported second-hand tyre casings for re-treading further reduced the demand for locally manufactured tyres.

The group’s Dunlop tyre division has an estimated 25% sales share in the local tyre market.

Earnings for the industrial and consumer rubber product manufacturer slipped 10% to R27.5m (R30.5m) or 117c (130c) a share on the back of a drop in turnover to R325.4m (R366.6m).

Hooper said the 3% drop in sales represented a real decline of 13%, but profits over the same period had dropped only 10% due to timeous cost reduction programmes and short-time working in the factories.

The dividend was maintained at 60c, covered 1.9 (2.1) times.

Hooper said government had now announced its intention to withdraw the 27-year ban on the importation of two key raw materials and would also introduce anti-dumping measures.

“If synchronised with the intention to abolish the remnant of import control on tyres and industrial rubber products, this will ensure competitiveness throughout the chain of manufacture.”

Financing costs almost doubled to R5.4m (R2.8m) as borrowing soared to R51.7m (R36.3m) in line with the reduction in current liabilities and increase in inventories.

Gearing for the period under review is 20.3%.

Hooper said BTR Dunlop’s three-year, R100m capital expenditure programme was on schedule and would be completed over the next 12 months.

While most sections of the group were affected by the continuing recession, BTR Dunlop was well positioned to take advantage of improved trading conditions, Hooper said.

Besides tyre, tubing and industrial belting, BTR Dunlop manufactures and markets sporting goods, carpets, vinyl flooring, mattresses, locking systems and rail fasteners.

BTR Dunlop shares eased 25c to R38.25 yesterday on the news of the results. The share peaked at R57.50 in July but has hit a 12-month low of R18 in September.
Tyre strike: Parties revise proposals

SHARON SOROUR
Labour Reporter

EMPLOYERS and unions embroiled in the three-week nationwide tyre industry strike have given revised proposals to their constituencies.

The parties agreed to mediation at a special industrial council meeting in Port Elizabeth at the weekend.

Mediation aimed at settling the dispute ended after nearly 15 hours of negotiating early this week.

About 5,000 hourly-paid workers at Tycom (formerly Goodyear), Gentyre Industries and Firestone downed tools on July 22.

The dispute between the New Tyre Manufacturers' Association and the National Union of Metalworkers of SA with the SA Iron and Steel Workers' Union — centred on wages and a moratorium on retrenchments.

Independent Mediation Services of SA mediator Mr Mark Anstey said both parties were reporting back on wages, job grading, a moratorium on retrenchments, training and the viability of the industry.
Strike 'will not disrupt tyre supplies'...

THE month-long strike by 8000 workers at eastern Cape tyre plants would not cause new tyre supply shortages or leave the industry more vulnerable to the influx of imported tyres, tyre industry sources said yesterday.

Strike action, which ended last week, disrupted production at Gentyre and Firestone plants in Port Elizabeth and the Tycon (formerly Goodyear) plant in Uitenhage. Dunlop, which is not party to the National Bargaining Forum, was not affected.

Sources said that demand for new car, truck and industrial vehicle tyres had declined in line with the slump in new vehicle market.

Tyre Manufacturers Conference chairman Gert Fischer said the inventory position of most tyre manufacturers was sufficient to fill orders from existing stock in the short-term.

Tyre industry sources said the strike action would result only in minor shortages in certain tyre makes. One source said the industry was overstocked and the work stoppages benefited tyre makers in that excessive stock levels could be reduced.

Limited production was maintained at most plants throughout the strike and groups using small production runs to bolster stock levels in tyre ranges that were in short supply. This would prevent cheaper imported tyres from gaining a firm grip on SA's tyre market.
Downturn shrugged off

BRENT VON MELVILLE

WAYNE Manufacturing has managed to shrug off the recession in its mining and industrial markets to post a real increase in earnings to 15.5c (15.0c) a share for the year to end-June. Earnings were up 17% to 13.2c (13.0c) attributable income of R9.2m (R7.3m), and the dividend was moved up to 6c (5.2c). At its current share price of 90c, the results put the group on a PE of 5.9 times and a dividend yield of 6.7%.

The manufacturer of industrial rubber and PVC products saw turnover up 17% to R129.8m (R110.6m), while income before taxation moved up 27.5% to R13.5m (R10.6m). The company's tax rate increased from 23% to 31%, attributed to the application of the partial method of deferred tax.

On the balance sheet, long-term borrowings almost doubled to R1.2m from R61.9m, although the group is still at an extremely low level of gearing. Chairman Robert Feinblum said the level provided a positive base for expansion.

Respectable year at Wayne

Consul subsidiary Wayne Rubber had a respectable year to June and has reported net profits up by 16.9 per cent.

The company reported that attributable profits for the period were R6.2 million compared to R7.9 million. Earnings per share were 83.2c (83c) and a final dividend of 4.5c was declared (3.7c). The total dividend payout for the year was 13.4 per cent up at 6c (5.2c).

It is covered 2.5 times.

A substantial improvement in operating efficiencies resulted in a 17.3 per cent increase in turnover to R129.8 million (R110.6 million).

The tax rate rose from 25 percent (R27 million) to 31 percent (R42 million).

The increase was as a result of the application of the partial method of deferred taxation.

Long term borrowings nearly doubled during the year, from R641000 to R1.2 million. — Sups.
**Firing all round**

Latest Consol results provide further proof of the endurance of consumer spending. The packaging and rubber group increased earnings for its year to mid-June by 23%, despite an increase in the effective tax rate from 37% to 46%. The share price has more than doubled over 12 months, and is trading at a high of 3950c.

The 1990 results were particularly strong because the business of Goodyear (now Tycon) was included for the first time, and retreader Tredcor was included for the second half. So apart from the full contribution of Tredcor in the year under review, these results are on a like-with-like basis.

The core packaging business again had a solid year, with sales up 15% and operating profit up 21%. Group MD Piet Neethling points out that the group had disposed of interests in flexible textiles and bags and packs, which reduced sales growth. Volume growth on the retained business was about 7%. The beer and soft drink markets have remained the engine for growth in glass, and the corrugated division picked up market share from Nampak, which suffered from a prolonged strike.

Tycon, which had been torn by a long strike in the previous year, regained market share, leading to a 107% increase in rubber operating profit, to R144.3m. But packaging continues to provide a healthier operating margin of 18.6%, compared with 12.7% in

Consol is now contemplating holding a rights issue. After another fine set of results, Neethling believes it is a good time to come to the market.

He says the group does not have any major acquisitions planned, but it would like to wipe out its borrowings of R160m and R50m of preference shares. Even now, gearing is respectable at 35%, with R86m of goodwill excluded from shareholders' funds.

Neethling says that Consol and its major shareholder, Anglovaal Industries, still have to decide on the size of the rights offer and the instruments which will be used; but AVI is anxious not to dilute its 56% holding. Meanwhile, Consol shares are not cheap. They offer an earnings yield of 4.9% and a dividend yield of 1.4%.

Phasing out of protection is a cause for concern. It has sought protection from imported glass tableware from the Far East, but is adapting its product range to meet the challenge.

Chairman Clive Menell says the group supports import permits on tyres, as tyre manufacturers are unable to buy raw materials at world prices, and because of the higher manufacturing unit costs in SA. The liberalisation of trade policy may have a negative impact on group earnings. But Consol is largely dependent on the buoyant markets for beverages and fast moving packaged goods. If, for example, Pepsi Cola enters the market, there could even be increased demand for Consol's glass and plastic bottles.

- Stephen Casson
At a time when both the national economy and world trade have softened, it could be expected that a local organisation with a foot in both camps would report a fall-off in demand and profit growth. Not so Trencon. Once again, chairman Neil Jewell has demonstrated his operation’s resilience and ability to turn adversity to advantage.

In the past 11 years, despite a hiccup in 1983 when EPS fell to 52c from the previous 74c, EPS has grown by a remarkable compound rate of 64.9% a year. Over the past seven years, from a much larger base, the figure is reduced to 39%. But it would have been too much to expect that this could be maintained in the current environment.

Traditionally conservative, at half-time Jewell indicated that earnings growth would top inflation by about 5%, to amount to 20% (Fox February 22). Hence 28.5% EPS growth shown in preliminary results for the year ended June 30, from after-tax earnings above R100m for the first time, outstrips even the most optimistic analysts’ forecasts, ranged between 20%-23%.

Turnover grew by just 5.6% because of a change in sales mix after Treadcon’s tyre interests were merged with Goodyear to form Contread.

Jewell says 1991 was again highly successful for both the locally based container export operation and foreign trading enterprises. With the dollar/rand ratio more or less steady for most of the year, little contribution came from a declining currency.

As usual, Jewell won’t disclose the nature of foreign-based operations, but is more forthcoming about local trade. Transport, which now accounts for under 10% of pre-tax income, improved only marginally. Growth did not keep pace with inflation. Nor for that matter did the motor trade division, which nevertheless is still profitable, says Jewell. On the tyre side, he says, pre-tax income in rand terms was similar to the previous year.

Evidently, the profit contribution from domestic activities, static in rand terms, is declining in percentage terms, while that from foreign operations more than compensates. Jewell also reports that the balance sheet (not yet published) indicates that the company is more liquid but with no dramatic year-on-year differences.

For the year ahead Jewell expects that operating profits from foreign operations will continue to improve and that a weakening rand will help this trend. He sees the contribution of domestic operations falling until the economy recovers.

A final dividend of 125c (100c) brings the total for the year to 160c and places the share on an historical yield of 1.9% at a price of R84. The p/e ratio falls to 11.4 from 13.6 before the results were released.

Some commentators feel the market is overpriced; that, at best, it will tread water for some time, but is more likely to weaken. But with Trencon continuing to produce results as it has for so long, it is difficult to see many shareholders selling if they are long-term investors, especially since a p/e under 12 is not high for a counter of this quality.

Unless unforeseen matters change growth prospects materially, Trencon must remain one of the most attractive investments on the market. Any weakness in share price should thus be used as a buying opportunity.

Mobile, which holds 48% of Trencon and 74% of Mobile Acceptances, has declared EPS of 180.8c (141.3c). A final dividend of 32.4c (26c) brings the total for the year to 40.6c (33c).

Consol describes the year to End-June as one of consolidation after the acquisition in the previous year of the major tyre interests. Goodyear and Tredcor. Focus last year was centred on marketing and new products.

Though Consol is in mature industries, its share has held the highest rating in the packaging sector, owing partly to successful product development. The glass packaging division alone launched 13 new products. The returnable bottle remains the most popular beverage package and Consol launched a 1.5l PET plastic returnable bottle for National Beverage Services. In tyres, the Eagle Two Star was relaunched and a locally manufactured range of Wrangler recreational tyres were also launched.

Consol has been fortunate to have key customers in the buoyant beer and soft drinks industries but it also trades in markets which are far from easy. Among the latter are the declining corrugated sector, the highly competitive flexible plastics industry and the motor industry.

These developments have all taken place without an undue strain on either capital expenditure or working capital requirements. Consol last year invested R78.1m in capex, including a R20.3m expansion of rubber mixing capacity and of capacity for large truck tyres. Most of the R15m earmarked for the PET plant to produce the new returnable bottle was spent.

Tight working capital targets were met, except in Tycon, where the finished goods stocks exceeded targets by R16.1m. Sales of commercial and off-road tyres were disappointing in the second half. Group stocks grew by a quarter, but if Tycon's excess level is excluded stock would have increased by 19% compared with sales growth of a third. This is a notable achievement considering the destocking by customers, particularly in paper and glass tableware.

The rubber division is larger in both sales (R1,13bn or 55% of the total) and in net assets (R473m or 60%). Packaging, however, still provides 55% of operating profit. Moreover, 39% of Tredcor is held by minorities who enjoyed R24.6m of Consol's R155.8m after-tax profit. This was more than double the R10.3m attributable to minorities in the previous year.

As a steady spender on capital expenditure, Consol enjoyed sizeable tax breaks from the former allowances for depreciation. In the year of acquisition, the group was able to write off half of its investment in plant and machinery in the first year. Reduction of this to 20% was the main reason why Consol's effective tax rate increased from 37% to 46%. It is now unlikely to increase further, so the tax rate should not further impede earnings growth.

Group MD Piet Neethling is predicting an improved profit performance, which looks likely on past form. Apart from a small dip in 1986, EPS has grown solidly over seven years, increasing 450% in that time. The impending rights issue (Fox August 30) will dilute EPS, but at the present market price of R4.50, an issue for R200m would have a dilution of less than 8%. With Consol trading at almost nine times tangible NAV, it looks a good time to come to the market. There are strong reasons for shareholders to follow their rights and clearly Anglovial Industries has no intention of diluting its stake.

Consol continues to test new highs. At R40, and even at demand yielding of 4.9% for earnings and of 1.4% for earnings, the share should be accumulated over time.

**GENBEL**

**Cash rich**

**Activities:** Long-term investor, holding portfolio of investments mainly in SA mining and resource industries. Also manages a trading portfolio and controls significant mineral rights.

**Control:** Gencor 49.98%; Santam 9.41%.

**Chairman:** T L de Beer; MD: A D Botha.

**Capital structure:** 432.3m ords. Market capitalisation: R2.86bn.

**Share market:** Price: 860c. Yields: 4.9% on dividend; 4.9% on earnings; pre ratio, 21; cover, 1.0. 12-month high, 750c; low, 450c. Trading volume last quarter, 4.7m shares.

**Year to June '88 '89 '90 '91**

| Investments (Rm) | 1.64 | 2.53 | 3.64 | 3.03 |
| Net income (Rm) | 128 | 100 | 187 | 415 |
| Earnings (c) | 25.1 | 25.9 | 26.8 | 32 |
| Dividends (c) | 25 | 28 | 27.5 | 32 |
| Net worth (c) | 458 | 664 | 785 | 740 |

**Refocusing** of Genbel's interests has continued and both distributable earnings and the dividend grew roughly in line with inflation in the 1991 year, though the NAV was slightly lower at year-end. After reorganisation of the portfolio, liquidity has risen sharply. There was a cash balance of R324m at June 30, while net current assets have swung from the previous year's net indebtedness of R252m to a positive R173m.

Chairman Tom de Beer says the growth in...
Longmile feels heat of tax and recession

MARC HASENFUS

RECESSIONARY conditions, exacerbated by a heavy tax bill and intense competition, caused a sharp drop in earnings for diversified industrial group Longmile.

Longmile directors said the level of earnings was anticipated and was in line with predictions made at the interim stage. Attributable earnings fell 37% to R15.2m (R24.2m) or 30.4c (48.3c) a share on the back of a 12% decline in turnover to R352.7m (R402m) for the year to end June.

Earnings were to some extent the consequence of an increase in taxation and continued intense competition in the marketplace, directors said.

They said the increase in taxation reflected reduced tax allowances available for utilisation.

The directors added that Longmile's 12-month period of consolidation had better positioned the group to weather the remainder of the economic downturn and they anticipated an improvement in earnings in the year ahead.

The total dividend payout was slashed to 7.6c (12.1c) a share, while keeping with group policy of maintaining dividend cover at four times.

Longmile passed its interim dividend in order to fund capital expenditure aimed at strengthening its capital base.

Better margins allowed the group to limit the reduction in income to 7% at operating level. Operating profit came in at R41.4m (R44.2m) but was offset by 87% increase in taxation to R13.2m (R4.3m).

Longmile's share was untraded at 210c yesterday, below its March peak of 295c.

Longmile's main operating divisions include Slencor Services, Utility Fasteners, Trentyre and Mastertrucks.
Export promotion a threat

WILLIAM GILFILLAN

SOME of Consol's investments were threatened by government's perception that SA should compete more on open world markets, chairman Clive Menell said in his 1991 annual report.

He noted that government placed particular emphasis on promoting exports while allowing a greater unregulated flow of imports.

"This holds potential negative consequences for existing manufacturing industries and current employment levels."

"The effect on the tyre and glass tableware businesses is of great concern to the Consol Group," Menell said.

Local tyre manufacturers are protected from imports through import permits and duties.

Consol believed this was justified because of the high local interest rates and income tax levels compared with those enjoyed by foreign competitors.

Menell said local raw material manufacturers were also protected, effectively preventing SA's tyre industry from accessing cheaper foreign raw materials.

The local tyre market was small and segmented, and was required to provide sophisticated products to an equally sophisticated vehicle industry, he said.

"This results in relatively higher unit manufacturing costs, making it virtually impossible for the local industry to compete with imports from large-scale, highly specialised overseas manufacturing operations."

Menell said the tyre industry was holding discussions with government on the question of protection.

He said the glass tableware investment was threatened by products imported at low prices, mainly from developing countries enjoying extremely low cost structures and substantial domestic government support.

Increased protection had been applied for, and government's decision was awaited, he said.

The packaging and tyre group, in the Anglovaal stable, has a capitalisation of about R2.6bn.

Compared to net assets valued in the 1991 balance sheet at R78m, the group's shares trade at a premium of more than 200%. 
German firm set to make bid for Gentyre

GERMAN tyre manufacturer Continental Gummiwerk is expected to bid for W & A-controlled Gentyre Industries in a deal picked at R58.5 a share, say market sources.

This would value W & A's 67.6% interest in Gentyre at R388m.

W & A deputy chairman Terry Rolfe said that W & A was openly looking for "offshore alliances" to open new export markets and bring overseas technology to the group.

He added that the group would not consider disposing of any of its companies now that W & A had weathered the downturn in the economy. He would not be drawn on whether partial disposal would be considered to attract foreign participants.

Rolfe would neither confirm nor deny that discussions were taking place with Continental.

But sources connected to Continental were confident the deal would be announced shortly. They added an offer would be extended to minorities, as required by the JSE, with the possibility of Continental pushing for full control of Gentyre and subsequent delisting of the tyre distributor. Continental senior directors were unavailable for comment.

W & A has attracted keen market attention over the past three days with more than 1.6-million shares changing hands on speculation the group was planning to dispose of various interests.

The unusual interest in the share has lifted W & A's share price by more than 8% over the week to 465c. Gentyre's share price rose sharply to around the R30 level in August — where it has since held — when the rumours first broke that W & A was looking for an offshore partnership.

Market sources argued the sale would be a logical step for the group which was in dire need of new capital to relieve the pressure of its interest-bearing debt.

W & A's consolidated interest-bearing debt stood at over R1bn at the end of 1996 and its consolidated interest payments totalled R163m last year. FSI, W & A's penultimate parent, reported a consolidated debt of R1.22bn at end-1996 and paid out R68m in interest last year.
Reconstruction of operations in any field is invariably an expensive business these days. Thanks largely to this having taken place in the silencer division, Longmile's preliminary results for the year to end-June were poorer than expected. Deputy chairman Nicolaas van den Bergh says the one-off expenses involved were partly responsible for the 6.5% reduction in operating profit.

Though turnover fell by a higher percentage (12%), Van den Bergh reports that, rather than reflecting a poor performance, this was because of the merger between Tredcor and Goodyear that resulted in the formation of holding company Contred in 1989.

Longmile has equity accounted Contred for the first full financial year. Essentially, it swapped the consolidation of the high turn-over Tredcor business for the relatively low turnover but higher margin, equity-accounted results of Contred. Shareholders in Contred are Longmile (18%), Trencher (21%) and Consol (61%).

Main event during the past year, however, was the effort to improve the profitability of the silencer business. In 1990, the Longmile Silencer division accounted for about a quarter of the group's operating profit. This, says Van den Bergh, was unsatisfactory.

Whereas previously the three silencer activities — Grapnel silencer manufacture; retailing and marketing; and the franchise operations — were all centrally managed, it had become necessary to split them into three separate divisions and to introduce new management, all of which has been done.

An essential part of the reconstruction was the purchase of the Kwik-Fit franchise. All the existing 156 outlets throughout the country, previously known as Silencer Services, have changed to the Kwik-Fit identity. This was an expensive process and Van den Bergh says the costs were all written off during the year.

In addition, new products (tyres, shock absorbers, trailers and batteries) have been added to the range of services offered through these outlets; this imposed a further financing requirement.

Though the interest bill was marginally higher at R12.9m, what really took a toll on the bottom line was an increase in the effective tax rate to 47% (26%). Attributable earnings thus tumbled by 37% to R15.2m and EPS fell by a similar percentage to 30.4c.

Van den Bergh says Contred, which produces about half the operating profit, and the utility fasteners and clothing divisions, which together generate roughly a quarter, are performing "pretty well" according to expectations.

He sees 1992 as a period for consolidation, but EPS growth is expected to exceed the inflation rate. It is, he says, one reason for maintaining a four times dividend cover — he believes the group will be producing a better return for shareholders than they would be able to obtain elsewhere. Consequently, the total dividend for the year is confined to the 7.6c final, which is sharply down on the previous payout of 12.1c.

Gerald Hirsbron
Consol sounds note of caution

Packaging and rubber manufacturer Consol turned in a bumper performance in the past year, but no immediate let-up in the recession is expected to dampen sales growth this year.

In the latest annual report, chairman Clive Menell says past results were heightened by the consolidation of a full year's trading of Tredcor, compared with only six months' contribution in the previous year, and by a marked improvement in the profits of the plastics division.

He adds that the group also benefited from the fact that its businesses focus on non-durable or semi-durable products, the demand for which generally held up well.

The year ahead, according to Mr Menell, could see a turning point in the economy, which could boost performance in the second half of the financial year.

Mr Menell says packaging is a good barometer of the state of the economy and that volumes are expected to pick up early in the upswing.

He concludes that even if recovery is slow, some earnings growth should be produced in the current financial year.

Consol, 57.7 percent-held by Anglovial Industries, is active in two sectors - packaging and rubber.

The packaging sector manufactures and markets glass, plastics and paper packaging and glass tableware. It also mines and processes industrial minerals.

The rubber sector manufactures and markets new and re-treaded tyres and industrial rubber products.

In the year to June, group turn-over climbed 33 percent from R1.6 billion to R2.1 billion and operating profit shot up 49 percent from R214.8 million to R319.6 million.

After net financing costs rose 13 percent from R27.4 million to R31.1 million, pre-tax profit soared 54 percent from R187.3 million to R288.5 million.

An increase in the effective tax rate from 37 percent to 46 percent reduced the rise in taxed profit to 32 percent from R177.9 million to R235.8 million.

After taking into account outside shareholders' interests and preference dividends, attributable profit advanced 23 percent from R161.9 million to R194.5 million.

Earnings per share grew from 157.7c to 194.3c. The dividend for the year was 55c a share, compared with a payout of 45c in the previous financial year.

The balance sheet remains strong, with gearing down from 34.2 percent a year ago to 29.2 percent.

Mr Menell says strict cash requirement targets have again been set for all divisions in the current year.

COMMENT: Consol, priced at R49.50, is trading on a P/E ratio of 20.8 and provides a dividend yield of 1.4 percent.

Although the share with its excellent track record and sound long-term prospects deserves a high rating, it is relatively expensive compared with other blue-chip shares.

Consol's shares have been particularly strong performers, having moved up from less than 60c four years ago to a current high of R65.90. The trend remains positive and will only be threatened if the price starts slipping below R55.
Hefty tax break helps
gentle pull through

By Jabalani Sikhakhane

Gentyre's useful and large tax breaks helped turn a 5.7 percent fall in turnover into a 14 percent advance in earnings for the six months to June.

Earnings were up 23c a share to 186c and the dividend was maintained at 55c, with the dividend cover increasing to 3.4 times.

The tax breaks resulted from the restructuring of the Gentyre group in 1989. In the review period Gentyre's effective tax rate fell from 35 percent to less than one percent and the tax charge was R148 000 from R8.51 million.

Chairman Terry Rolfe says sales of the tyre and industrial division declined in real terms. The market for industrial products was depressed, but tighter control of costs and working capital helped the division maintain its contribution to group profitability.

The tyre division, which contributes about 86 percent of Gentyre's profit before interest and tax faced excessive discounting and more freely available tyre imports which saw the group's operating margin fall from 12.7 percent to 11.1 percent.

Turnover fell R13.59 million to R229.56 million and operating profit dropped R5.59 million to R25.44 million. Interest received was up 25 percent to R3.73 million.

Mr Rolfe says the group actively pursued export opportunities, with encouraging results. However, he cautions that the four-week strike at the tyre plant will affect profitability in the second half.

---

Export drive lifts

Bateman earnings

By Sven Länsche

A successful export drive enabled engineering group EL Bateman to boost attributable earnings by 20 percent to R21.25 million (R18.51 million) in the year to June.

The rise in earnings was on the back of a 33 percent surge in turnover to R786.11 million (R588.96 million) and a 24 percent boost in operating income to R36.19 million (R29.12 million).

Earnings per share were 19 percent higher at 80.5c (67.2c), from which a dividend of 29c (21.6c) has been declared.

Chairman Bill Bateman says the group was able to more than balance the local downturn with a very successful export drive.

The group has diversified significantly on the local market and is less dependent on the heavily depressed mining industry.

Conditions in company-related industries are not conducive to short-term growth.

The company will strive to maintain earnings in real terms in the 1992 financial year, which would be considered a good performance, Mr Bateman says.

At its current share price of R60 Bateman's shares are trading at 60 percent of earnings yield or 13.4 percent and a dividend yield of 4.4 percent.

To make the shares more tradeable, the group is planning a 10-for-one share split in November.
Tax bill cut helps rescue Gentyre

DECLINING sales and increased pressure on margins hit W & A-controlled Gentyre Industries for the six months ended June.

However, the industrial rubber and tyre manufacturer was able to save its bacon by an unexplained and heavy cut in its tax bill to R148 000 (June 1990: R65m), resulting in a 14.5% increase in attributable earnings to R25.9m (R22.5m) for the period.

Chairman Terry Rolfe said the drop in operating profit to R25.4m (R31m) reflected tougher competition from imported products, resulting in a weaker operating margin of 11.1% compared with the previous period's 12.7%.

The drop in sales to R229.3m (R263.3m) was due to local recessionary conditions. "The reduction in new vehicle sales and cutbacks in the mining industry were the major factors which contributed to this decline."

While the industrial rubber market remained depressed, he said Gentyre's rubber product division achieved profitability as a result of cost control and a working capital management programme.

He said the effect on profits of the recent four-week strike at the company's tyre manufacturing plant was minimal.

However, the incident could have some effect on profits for the last six months of the trading year.

While tough trading conditions would probably prevail, Rolfe was confident the company would produce satisfactory results for the current trading year.

He said Gentyre was pursuing export opportunities which were proving "most encouraging".

Interest received of R3.7m (R3m) also helped bolster the pre-tax profit line. Earnings came in at 186c (183c) a share, of which an interim dividend of 55c a share has been declared.

The dividend was the same as in the previous period.

The dividend cover has been lifted to 3.4 from the previous period's 3.0 times.

Gentyre reminded shareholders of the recently published group cautionary announcement that negotiations were in progress which could affect Gentyre's share price.

The cautionary announcement was published following strong speculation that German-based Continental Gummiwerk was planning a bid for control of Gentyre at R35 a share.

Gentyre's share price is holding at R30, which sources say is the likely purchase price to be settled between Continental and W & A.

They say an announcement outlining the deal is expected to be made within the next two weeks.
SPECTACULAR gains in diversified transport group Trencor were indicative of continuing market interest in the pale blue share, analysts said yesterday.

The share moved up R2 to a new high of R169 yesterday on a small deal worth R50 000.

This follows a R7 gain on Tuesday in another small deal where 300 shares traded.

Market observers said price was no longer the question and buyers were becoming desperate to build up a stake in the group.

Trencor, helped by exports and a strong performance from offshore operations, increased earnings by 28.5% to 735c (572c) a share in the year to June 1991. The group has seen a compound growth of 40% since 1984. (MU)

Analysts believed Trencor would continue its strong performance in the year ahead.

Although Trencor is listed in the transport sector, its main operating activities include the manufacture of containers, tyres through Contred, Henrick-Frechauf, a 39% stake in the Indian Ocean Export Group and various transport groups.

The transport sector index, heavily weighted by Trencor and holding company Mobile, stands at 29 201, almost double the 11 100 at the same time last year.
**Tighter controls**

A 62% slump in operating profit for the 1990 financial year was followed this year by an even more dramatic turnaround, with profit rising by 113%. Perhaps there is something to be said for having a capable big brother to call on when the going gets tough.

Darmag and Sondor, though operating in different ends of the plastics and rubber industry, are effectively controlled by Anglo American Corp (Anglo), through its listed Zimco. For Anglo, these companies represent a strategic investment. Should there be evidence that all is not well, Anglo can step in, take control, institute remedial action and ensure that there is follow through. In the case of Darmag, this appears to be what happened.

Some of the problems were apparent in the rubber division which, in the 1990 financial year, made a loss because of product obsolescence and substitution of new products (PM, September 14 1990). Since then, with effect from the beginning of the 1991 financial year, the group has been restructured to focus its activities more clearly.

Noel Drew, who represents Zimco’s interest on the Darmag board, says tight management control of expenses has improved efficiencies, cash flow has strengthened, working capital has been reduced and short-term borrowings have declined. All the Cisel operations have been consolidated. Results from the rubber division improved because of the disposal of loss centres and other economies introduced. Nevertheless, the company is dependent on the lead acid battery industry, which is stable but growing no growth.

GM David Looms will take over as MD from Monty Dersley, who will remain on the board. Looms emphasises that diversification of the product range is a prime objective, though the group will also concentrate on the motor industry and on exports to African countries, which he believes could play a major role in Darmag’s future.

Looms sees no growth in EPS for the 1992 financial year. This is to be a year of consolidation. Capital expenditure on new machinery will absorb much of the cash flow. In the plastics division, a new injection moulder is being imported from Japan to replace ageing equipment and enable manufacture of larger plastic components.

With Anglo firmly behind the operation and Looms in the driving seat, it’s likely that Darmag will produce a solid performance in the long term. In its current form, though, results will largely remain linked to the fortunes of the economy and the motor industry in particular. The share does not offer much excitement for investors in the short-term.
Coming to market

Anglovaal Industries (AVI) is well-placed to raise additional capital from the market after announcing 13% earnings growth for the year to end-June. It is one of the few industrial conglomerates to maintain earnings growth through the recession.

AVI intends to raise R388m by offering 14 debentures for every 100 ordinary shares. It needs R234m to follow its rights in two issues being held simultaneously by its strongest listed subsidiaries, Consol, whose own issue will raise R300m, and Irvin & Johnson (I & J), whose issue will raise R97m. The remaining R154m will be used to "maximise future business opportunities." Altogether, R480m of group debt will be eliminated.

The three issuing companies' shares all enjoy buoyant ratings; AVI stands on an earnings multiple of 14.9 and a dividend yield of 1.2%; Consol on 20.6 and 1.4%; I & J on 14.9 and 2.2%. Consol, I & J and unlisted National Brands contributed almost three-quarters of earnings and more than offset the reduced contribution from construction and textiles.

AVI group MD Jan Robbertse says that ideally, rights issues should coincide with an acquisition or major expansion, but in the real world conditions are not always ideal at that time. AVI's capital spending will accelerate - R1.1bn will be spent over three years compared with R206m in 1991 - but there is no dominant headline-grabbing project.

AVI has a good eye for acquisitions, which often take place at short notice. Most significant was Consol's purchase of Goodyear from its American parent in July 1989. Others have included HiPerformance Systems, the former Hewlett-Packard, and Moor River Textiles.

AVI has an excellent opportunity to raise cheap finance. Existing shareholders will find that the interest available from convertible debentures give a much more attractive yield than ordinary shares. AVI and Consol are offering 5% and I & J 6% - about three times the current dividend yield. Even after tax, the debentures will still offer a better yield, yet these dividend pay-outs cost AVI much less to service than loans.

For Anglovaal, which holds 60% of AVI's ordinary shares, the rights issue does not threaten control. Anglovaal's philosophy is to preserve control but keep gearing low, which can be a delicate balancing act, particularly for a family-controlled company.

Anglovaal's share of the rights issues will be R242m, a sum it can afford without upsetting its own gearing. When new shares in AVI were last issued in 1989, Anglovaal's stake fell from 66%. Now, Anglovaal has agreed to underwrite the offer, so its stake in AVI will remain intact. AVI is likely to provide the group with better earnings growth than its mining interests in the short term, so Anglovaal cannot afford to reduce its exposure to industry.

At R97, the AVI debentures are being offered at a 13.4% discount to the current market price of R112. The debentures will convert to ordinary shares when dividends match the debenture interest payments. Analysts expect this to be between 1997 and 2000. And AVI has just one class of ordinary shares. A storm was caused during last year's Anglovaal rights issue, as the group had earlier issued N shares, which carry only 1/500th of the voting power of A shares. No such device has been used by AVI.

The market generally supports the rights issue, not least because it will bring high-quality scrip into play. AVI's earnings and dividends have doubled since 1987. The operating margin has increased from 5.3% to 9.8%. Gearing peaked at 31% in 1990, but is now down to 25%.

AVI's gearing has already been improved by the sale announced this week of 16.2% of Cadbury Schweppes. This might seem a strange decision in view of Cadswep's record and prospects. But Anglovaal does not like passive investments and it had hoped to buy a larger stake in the future, perhaps if Cadswep's price had disinvested. AVI sold the stake for R177m - a capital gain of R134m. This money can be made to work much harder for the group, as only the dividend income from Cadswep was brought to account. Short-term borrowings, which were R200m in the last balance sheet, will be almost wiped out by this deal. Once the surplus of the rights issue is paid in, gearing will be barely 10%.

Ostensibly, I & J has the least need for a rights issue. It has more cash than borrowings. But it has established a joint venture with a Soviet consortium in Namibia and may have further expansion plans. I & J has had few disappointing years in its 28 as a listed company, though 1990 was prominent among the lean years. In 1991, however, I & J lifted earnings by 20%, despite lower chrome prices and no real growth in the processed foods market.

Consol is now the star performer of the quoted companies in the AVI group, and it contributed 29% of 1991 earnings. However, the share is widely considered to be over-priced, so there is a deeper discount for Consol debentures. At R34, they will be issued at a 15% discount to the current market price of R40.50. So the issues have been carefully structured to allow for the recession and a generally tired-looking stock market.

Stephen Creasy

TEMPORA FM 20/9/1

More sweeteners

Normally, investment trusts trade at a discount to net asset value, but this has not been the case with Suncrush subsidiary Tempora. It now trades at R19.5, a premium on current NAV of R18, calculated by chairman Robin Hamilton.

The shape of the trust has changed significantly over the past two months. Tempora has had a rights issue and R110m was placed with institutions to fund the purchase of 16% of Cadbury Schweppes, to increase the group's holding to 22%.

Hamilton expects the share to be more tradable than either of its two major investments, Cadswep and 20% of Dalys, the Suncrush holding company. Suncrush's stake in Tempora has fallen from 62% to 43%, and the recent R100m placing was spread among eight institutions. Tempora is now predominantly a vehicle for investment in the soft drink and confectionery market. Its stake in Cadswep is worth R240m, in Dalys R130m. Its other significant investments are R30m in Sakers and Safcon, and about R3m in Seasell and Seacon.

Hamilton says he does not expect the Suncrush interests to be involved in any way with
Tyre makers seek protection

THE SA Tyre Manufacturers’ Conference is to urge the Board of Trade and Industry (BTI) to restore import restrictions on tyres or offer local tyre makers greater protection.

This follows government’s controversial decision to liberalise import restrictions on tyres.

The effect of cheaper imported tyres is reflected in the weaker results from the two listed local tyre makers, Gentyre and BTR Dunlop.

Conference director Gert Fischer said tyre makers would meet raw material suppliers next week and a meeting with the BTI was planned for next month.

Tyre industry sources said that if import restrictions were eased, tyre makers should be allowed to buy raw materials from cheaper overseas suppliers.
Tiger Wheels pumped up again

Tiger Wheels' earnings are back on track for the year to June after a R2 million first half setback as a result of faulty raw materials.

Second half profits were R1.5 million which brought total attributable profits for the year to R1.9 million. The total for the previous financial year was R3.4 million.

Earnings per share were 8.3c on an increased issued share capital compared with the previous 12.2c. A dividend of 3c per share was declared (4.5c).

Shareholders are again given the option of taking up bonus shares on the basis of six shares for every 100 held.

Turnover was 24 percent up at R64.4 million but as a result of pressure on margins operating profit was only slightly up at R6.1 million (R5.7 million).

The interest more than doubled to R1.7 million (R688 000) while the R2 million costs incurred as a result of the raw material problem left pre-tax profits at R2.4 million (R5.1 million).

Chief executive and co-chairman Eddie Keizan says steps have been taken to prevent a repeat of the raw material problem.

He adds that an investigation into group's rights and the likelihood of recovering the money are in progress. — Sapa.
Tiger Wheels loses air after R2m blow

MARC HASENFUSS

TYRE and wheel group Tiger Wheels performed to expectations in the second half but could not offset the effects of a R2m abnormal loss incurred at the interim stage, when it received faulty raw material.

CE and co-chairman Eddie Keizan said steps had been taken to prevent a repeat of the raw material problem.

Investigations into the group's rights and the likelihood of recouping the lost revenue were continuing.

Turnover rose 24% to R64.4m (R51.7m), but operating profit crept up 5% to R6.1m (R5.7m) as competition and recessionary conditions eroded margins in the year to June 1991.

The R2m abnormal loss and a surge in the interest bill to R1.7m (R68 000) knocked bottom-line earnings down 46% to R1.84m (R3.4m).

The dividend payout was reduced to 3c (4.5c) and shareholders were again given the option of bonus shares in lieu of dividend on the basis of six for every 100 held.

Earnings a share fell 48% to 5.3c (12.2c) with more shares in issue.

Keizan said he was happy with the results under the circumstances. "Tiger Wheels has significantly unrealised upside potential, particularly in the manufacturing division, where output is below capacity," he said.

The group's export orders to 13 major countries had shown significant growth. Tiger Wheels had secured its first major original equipment order for supplying wheels to a German manufacturer. Keizan said development work had started and would result in increased business in a year's time.

According to the balance sheet, gearing stands at 55% with cash reserves down to a slim R75 000 (R330 000). Net asset value a share increased to 46.4c (41.9c) a share in the period under review.

Keizan, optimistic about the year ahead, is budgeting for increased earnings in all areas of the group's operations.

Tiger Wheels, currently at 55c, is wedged midway between its March high on the JSE of 65c and August low of 46c.
The impact of high debt levels was apparent once again in the W & A interim results. Though operating income advanced by a quarter, thanks to an increase in interest paid of nearly two-thirds, the pre-tax profit was static.

According to CE Jeff Liebesman, the working capital requirements increased, as did the need for capital to finance the takeover of Alloy Wheels International and Unit-Span Modular Building by UK subsidiary AAF Investments. By June 30, gearing based on the group's own calculations had fallen from 67% to below 60%. A conservative calculation tyre could be sold which would generate a hefty inflow of funds that could be used to repay borrowings. But Van der Merwe says that FSI will not sell its core businesses, and Gentyre is considered to be one of these.

Even so, perhaps the sale of a minority stake should not be ruled out. W & A might hope for a full price for any equity sold, but it would be at a cost to the earnings stream. The 68% interest in Gentyre accounted for more than 34% of W & A's attributable earnings at the halfway stage.

Moreover, Gentyre is a net earner of interest, and carries more cash than debt. It also has a very low effective tax rate. In 1992, however, Gentyre will be back in tax, and so the timing for its sale could be good. If a meaningful stake is sold to Continental, then the group could realise as much as R100m.

W & A's own tax rate was only 9.4%, down from 23.3% at the previous interim, due to capital allowances in subsidiary companies. Van der Merwe says that the rate will remain around 10% for at least two years. But, unless W & A continues to buy poor performers, eventually its tax rate will be comparable with those of other holding companies.

There do not appear to be too many concerns in the market with the performance of the major underlying businesses. Natbel is exporting significantly and the Edworks shoe chain might finally be recovering though that has yet to be shown.

The number of shares issued was increased by 118% as part of last year's restructuring of the FSI group, which led to the delisting of five subsidiaries. As a result, EPS fell by 3.2%, and the group expects a fall for the full year of 10%, to around 85c. Liebesman reckons that this will be a much lower fall than is likely from most other conglomerates.

But that is a misleading comparison. He admits that the group does not operate in fragmented or highly cyclical industries. Some other conglomerates which are not heavily exposed to cyclical businesses — such as Safren, AVI and SA Breweries — all showed good increases in EPS.

At 540c, W & A's share price gives a p/e of 5.7 and a dividend yield of 7.8%. Market reactions remain divided on W & A, though even its critics acknowledge that it has made progress with gearing and stock control. The group now has a large number of shares to service, which puts additional demands on the trading performance.

Provided that problem areas such as Edworks are dealt with successfully, and there are no further dilutions or shuffles of the shareholding structure, W & A may have a reasonable future. The plan that emerges for Gentyre will offer further indications of the likely direction.

Stephen Creason
Tyre duty scrapped

The Board of Trade and Industries (BTI) has announced the scrapping of the 20% import duty on foreign-made tyres on December 31 while allowing import duties on imported natural rubber to remain.

The R1.5-billion tyre industry is to ask the board to retain the existing duties on tyres or to reduce the duties on natural-rubber imports.

Gert Fischer, director of the SA Tyre Manufacturers Conference, says he fears that when duties are removed tyre distributors will substantially increase imports, putting pressure on local manufacturers.

Evén with the duty protection for tyres, local manufacturers face competition from imports. Gestyre, one of the two listed tyre manufacturers, recently reported lower pretax profits, blaming imports for part of the loss.

Dr Fischer says imports have increased sharply in recent years and now represent about 25% of total sales in SA.

By DON ROBERTSON

Passenger-tyre imports rose from 1.67-million kg in the first five months of last year to 2.38-million kg between January and May this year, while truck tyres increased to 2.78-million kg from 2.02-million kg.

A standard imported passenger tire can be landed in SA at between R5 and R8 a kg, compared with the local cost of about R11 a kg.

Many of these imports are used tyres, purchased for retreading but sold instead as second-hand.

At present tyre manufacturers are forced to buy synthetic rubber from Sotrachem’s Karbochem plant in Newcastle, and are effectively prevented by heavy duties from importing cheaper natural rubber.

Dr Fischer says he is hopeful that the tyre manufacturers’ application will be well received by the BTI. The discussions will take place with raw-material suppliers.
BTI to scrap 20% tyre import duty

THE Board of Trade and Industry (BTI) is to scrap the 20% duty on imported tyres from December 31, while duties on imported natural rubber will remain in force.

The move, announced at the weekend, is likely to elicit strong opposition from SA’s tyre industry, which last week urged the board to introduce anti-dumping laws to prevent an influx of cheaper imports.

Industry representatives, including Tyre Manufacturers’ Conference chairman and BTR Dunlop MD Clive Hooper; Gentyre MD Clive Tutton; Firestone MD Bill Taylor; and Tycon MD Mike McNamara, were also looking for a reduction in duties on natural-rubber imports.

While none of the representatives could be reached for comment yesterday, a tyre industry source said the industry could not accept the escalating tyre imports without enforcing an effective anti-dumping mechanism.

He said that if imported tyres were allowed into SA, the products should be required to adhere to the same quality control system as locally-made tyres. The source said if these requirements were not met then the industry would have to apply for the necessary degree of protection.

Standard imported passenger tyres cost R6 to R8/kg landed while local tyres cost about R11/kg.

Imports of passenger tyres rose to 2,38-million kg between January and May 1991 from 1,67-million kg in the first five months of last year. Truck tyre imports increased to 2,78-million kg from 2,02-million kg.

Industry analysts said imported tyres cost substantially less than those made locally but warned that foreign-made tyres were not always suited to road conditions in SA.

Local tyre makers believe the protection against imports was justified in the light of high local interest rates and income tax levels.

Local raw material suppliers are also protected against imports, which prevents tyre manufacturers obtaining their materials requirements from more competitive suppliers.
Industry denies report on tyre duties

THE tyre industry yesterday denied the Board of Trade and Industry (BTI) had announced duties on imported tyres would be scrapped at year-end.

The SA Tyre Manufacturers' Conference (SATMC) also stressed it had not called on the BTI to lift import control on raw materials.

"The tyre manufacturers only expressed their view that, if quantitative import control is abolished on tyres and tyre-related raw materials, it should be done simultaneously."

Import control of new tyres had been liberalised since mid-1989 leading to imports of new and used tyres now representing 25% of the replacement market in SA, the SATMC said.

"The industry is applying for higher duties and anti-dumping duties before import control is finally lifted."

Business Day yesterday erroneously reported that the ad valorem duty of imported tyres was 25%. The SATMC said the duty on most imported tyres was 20%. 

---

Business Day Reporter

Import duties on tyres stay

THE SA Tyre Manufacturers’ Conference is to ask the Board of Trade and Industry to increase import duty on tyres before quantitative import control is lifted.

In last week’s Business Times it was reported that the SATMC would ask the BTI to retain import duties on car and truck tyres, which it suggested would be scrapped at the end of the year.

Import duties range from 10% on tubes and earthmover “slicks” to 25% on car and truck tyres. Quantitative import control limits the volume of tyres that can be imported and does not refer to import duties.

Quantitative import duties will be dropped on December 31 unless the SATMC is successful with a petition to the BTI to retain import control on tyres.

Business Times also said that tyre manufacturers were forced to buy synthetic rubber from Sentrachem’s Karbochem plants. Alex Olivier, a director of Karbochem, says that since the closure of the polyisoprene plant last year the duty on natural rubber was dropped.

Tyre manufacturers buy most of their SR from Karbochem, representing less than 50% of their requirements, on which there is a 25% duty.
Activities: Makes road trailers and containers; road freight haulage; owns 21% of Contred, which makes and retreads tyres; vehicle and motor spares outlets.

Jowell reports a full order book for containers "for some months ahead" and adds that there is increasing demand for tank containers for liquid products. Foreign activities, he says, should therefore again contribute more to earnings, domestic operations should produce results similar to those of 1991, and earnings should rise.

Jowell is always conservative and the market has come to expect him to produce earnings well ahead of the indication he gives. But it is difficult to suppress the feeling that heady earnings growth rates are becoming much more difficult to repeat. Even so, there are many shares on much higher PEs than 13 which do not have a comparable track record, nor the same potential that Jowell's foreign interests offer.

Gerald Hirschen

TRENCOR Fm 18 10 '91

Earnings shift

Profit sources have changed considerably over the past five years. In 1987 manufacturing, transport and motor trade and tyres contributed 91% before tax. In 1991 their contribution fell to 52% while "trading and other" moved up to 48%.

Even now, with most of the world ready to lift sanctions barriers, chairman NJ Jowell will not disclose the precise nature of this category, which produces most of its income from offshore earnings and exports. But it is clear that it is largely the export of locally manufactured containers that has been responsible for the success.

To generate these sales, Trencor has strategically based international business offices in low-tax jurisdictions. The overall effective tax rate was just 17% in fiscal 1992. Earnings from these sources have also embodied the advantage that returns to SA have been made in hard currency, offsetting the deprecating rand. But this did not apply in 1991 since there was no effective decline in the rand/dollar exchange rate.

Container prices softened, reports Jowell, who points out that the container plant is dedicated to exports, which are produced with almost 100% local content. Without government export incentives, he says, this activity would not be competitive.

His admission draws attention to a potential Achilles heel. With deregulation enjoying high priority, the consequences of withdrawn export incentives would be serious. Meanwhile, it appears is if there will be continuing downward pressure on margin from international competition.

The same can be said of the tyre business, where deregulation and the imminent lifting of import duties are cause for concern in the short term. With its investment of 21% in Contred, which produces Goodyear and Kelly tyres through its subsidiary Tycoon, Trencor may yet have to suffer a further decline in earnings contribution in this area. However, Contred's other subsidiary, Tredcor, which distributes all brands of both imported and local tyres, could benefit from the new legislation.

Owing mainly to strong demand for containers, Honrad-Fruehauf, Trencor's 75% owned subsidiary and largest manufacturer of truck trailers in SA, which diversified into container manufacturing, remained profitable. The local trailer market reached its lowest level in 20 years, says Jowell. Even so, a new R11.5m trailer manufacturing facility was opened in Cape Town in February.
DIVERSIFIED industrial group Longmile has restructured its silencer division in a bid to resume its growth pattern.

Last year the group's four-year inflation beating growth pattern was interrupted when strained business conditions, exacerbated by strikes and labour unrest in the silencer division, caused a hefty 37% drop in earnings.

In his annual review, chairman Hendrik Potgieter said: "The group has taken the opportunity to restructure itself so as to enable it to take full advantage of an economic upswing as and when it occurs."

He said the restructuring of the silencer division saw the manufacturing, retailing and franchise operations organized into separate divisions.

Potgieter said towbars, trailers, shock absorbers, batteries, tyres and silencers were now distributed through the Kwik-Fit, Silencer Shop and Silencer Service outlets.

MARC HASENFUSS

Grapnel towbars and silencers, produced by the manufacturing arm, would be distributed through Grapnel distribution network to the motor industry.

Under the new structure the division was trading profitably, Potgieter said. The labour problems experienced in the silencer division had been redressed and production had returned to normal.

He said Longmile had disposed of its fasterner division after the year-end.

The disposal was prompted by the depressed local market for fastener products and the inability of the division to compete in the export market due to its relatively small manufacturing capacity.

Potgieter said the effect of the sale on group earnings and net asset value would be negligible.

The group's tyre division was also affected by labour unrest but Potgieter said these problems had been addressed and had already resulted in improved manufacturing performance.

Although the annual report does indicate divisional contributions to earnings, it is widely believed that the combined tyre venture between Tycon and Tredcor has been the gem in Longmile's stable.

However, government's easing of import control on tyres could increase competition in the tyre industry and put pressure on operating margins in the year ahead.

The launch of Kwikfit early last year required significant capital funding which affected Longmile's balance sheet. At year to end June 1991 gearing stood at a relatively high 64.5% (53.2%), the current ratio remained at an acceptable 1.21 and interest cover dropped to a five-year low of 3.1 (3.9) times.

Longmile slumped to a 160c low earlier this month but recovered well to trade at 190c last week. The share peaked at 225c in March.
WAYNE MANUFACTURING

Diversifying for growth

In spite of lower demand for PVC and rubber products in the mining and industrial sectors, Wayne managed to increase earnings and turnover in real terms and expects to increase earnings again this year.

The plastics division, which makes PVC boots and hot-water bottles, was the weakest performer, despite diversifying from gum-boots, supplied mainly to the mining industry. The Phoenix, resin and rubber divisions, however, all improved earnings. Rubber, with a range of 3,000 products, was the star.

Activities: Manufactures rubber products for footwear and industrial use.

Control: Consalu 84%.

Chairman: R M Feinblum; MD: R D Radford.

Share market: Price: 90c. Yields: 6.7% on dividend; 16.9% on earnings; pre-ratio, 5.8;
cover, 2.8. 12-month high, 100c; low, 56c.

Cape-based competitor Rubber Products & Mouldings was acquired from the beginning of this year and renamed Wayne Rubber Western Cape, which should add R23m to sales.

MD Rob Radford says the year was characterised by aggressive marketing, effective asset management and strict expense control. Stock turn was raised from 8.5 to 9.2 and debtors increased by just over 7%, compared with a 17.3% increase in turnover.

Interest paid, however, rose more than 60%, as there were acquisitions in the last quarter of the previous year, though interest and leasing cover was a healthy 4.4.

Chairman Robert Feinblum says Wayne has the financial strength to develop all resources and maintain leadership in the supply of rubber and PVC products. The Phoenix and Wayne Rubber divisions have been merged. The group continues to increase its product range to diversify from its former position of predominantly a boot and footwear components manufacturer.

EPS have risen steadily over the past four years, though returns on equity and capital have suffered since the old Phoenix Rubber bought Wayne from Consalu at the beginning of financial 1990. The share may be underrated at a p/e of 3.9 and dividend yield of 6.7%, in view of its good record and financial management.

Stephen Crampton
Trencor NPEs to be listed soon

The JSE has granted listings from December 19 for nil paid letters of allocation for the 8 percent convertible debentures to be issued by Trencor and Mobile Industries.

The rights offer of 2,662,600 debentures of R51 each in Trencor is aimed at raising R210,5 million for the development of the company’s interests in manufacturing, trading, tyres, exports and overseas operations.

The offer of 5,872,621 debentures at R22,50 each in Mobile is aimed at raising R127,6 million to enable Mobile to follow its rights in the Trencor offer in full.

The last day to register for the rights offer is Friday. – Sapa.
Rubber to be cheaper

BRENT YON MELVILLE

Karbochem, SA's sole manufacturer of synthetic rubber, has reduced the prices of its Afool and Afool (styrene butadiene rubber) product ranges.

The price reduction follows the international weakness of monomer prices, and Karbochem's commitment to gradually bringing its prices into line with import parity.

Karbochem MD Ben Schoeman said prices of oil-extended styrene butadiene rubber grades had been decreased by about 4.5% and prices of non-oil-extended rubber by about 4%.

He said prices for these products had remained unchanged since April 1990, despite increases in input costs caused by the high inflation rate.

The synthetic rubber products are used in the production of tyres, conveyor belts, and have wide applications in the mining industry.

Karbochem recently reopened part of Sentracem's mothballed Newcastle synthetic rubber plant to produce alkylamines, used in the manufacture of agricultural chemicals, explosives, rubber and water treatment chemicals.
Tiger lines up full export order book

MARC HASENFUSS

THERE was significant upside potential in most areas of Tiger Wheels’s activities for the year ahead, as well as opportunities to further increase wheel exports, according to joint chairmen Eddie Keirnan and Martin Glatt in their annual review.

The chairmen said that the manufacturing division had already secured an order to supply alloy wheels to a major German car plant.

The tooling and approval process should last most of next year with real benefits to sales and profitability being felt in the years ahead, they said.

They said capital expenditure should be less than in previous years, with the main focus being on de-bottlenecking and productivity improvement.

"Prospects for the year ahead look good with a full export order book and a steady domestic demand anticipated."

Exports of wheels almost doubled for the fifth consecutive year and could have been higher were it not for supply problems at the group’s factory and the effects of the Gulf War, they said.

In the year to end June, Tiger Wheels’ consistent growth record was interrupted when faulty raw material resulted in a £2m abnormal loss, pushing earnings down a hefty 46% to £1.84m (£3.42m).

After incurring losses in the first half of last year, the group’s UK wholesale business returned to profitability in the last quarter.

The business, in which Tiger has a 30% stake, has grown considerably in market share, staff and facilities and is poised for healthy growth when the UK economy recovers, the chairmen said.

They said plans to form an association in the US to establish a distribution business were at an advanced stage.

The development of further retail outlets is part of the group’s long-term strategy, but the chairmen stress that this would only be done when suitable high-quality opportunities presented themselves.

Some instability was expected in the retail tyre market arising from the possible removal of the quantitative import control on tyres currently under consideration by government.

The chairmen said that much of the conflict between Tiger’s retail stores and its wholesale customers had been eliminated by careful geographical positioning.

The share is holding steady at 86c, midway between its August low of 48c and March high of 86c.

Mixed bag of results from Darmag (1961)

Darmag, Anglo-American's rubber and plastics manufacturer and supplier, has turned in a mixed bag of results for the six months to September.

Turnover was down slightly from R14,066 million in the corresponding period last year to R13,757 million.

Income attributable to shareholders was, however, marginally higher at R1,135 million (R989 million).

Earnings per share amounted to 5,1c (4,3c).

No dividend is being paid.

The company says the expected increase in sales in the first half of the year never materialised because of a decline in demand for its rubber and some plastic products.

The company says the attention afforded to working capital provided a positive cash inflow, resulting in lower interest paid, which amounted to R226,000, compared with the R652,000 paid in the same period last year.

Future plans include diversification, but this is not expected to make any contribution to earnings in the current year.

The company says profits for the current financial year are expected to, at best, be the same as those achieved last year. — Sapa.
Tighter controls keep Darmag earnings ahead of falling profits

ROBERT LAING

TIGHTER control of working capital and reduced fixed overheads helped Ciskei-based rubber and plastics producer Darmag increase earnings 15% in the six months to end-September despite profits falling 18%.

Electronics-listed Darmag, which depends on the lead acid battery industry for most of its sales, experienced reduced demand for its rubber products and some plastic components. Turnover fell 2% to R13,8m from R14m in the 1990 period.

Directors said the market was weak and competitive, limiting the chances of recovering rising costs.

Margins slipped to 10% from 12%, resulting in operating profit falling 18% to R1,4m from 1990's R1,7m. This was offset by 64% lower interest payments of R226 000 (R632 000) as short-term borrowing fell to R80 000 (R1,2m), cash rose to R1,8m (R16 000) and a bank overdraft of R2m was paid. The reduction in interest and the Ciskei's lower tax rate boosted attributable earnings 15% to R1,1m from last year's R990 000.

Earnings were 8,1c (4,5c) a share but no interim dividend was paid. Darmag has not paid an interim dividend since 1989.

Investment planned for new machinery and entry into diversified markets would not contribute to final results. Directors forecast profits for the full year would remain at 1990's level. Last year's final dividend was 2c on earnings of 8,8c a share. Darmag's share price has not moved from 35c since July and is 35% under its net asset value of 54,4c a share.
Goodyear, Dunlop to pump up prices

TWO of SA’s major tyre manufacturers — Goodyear and Dunlop BTI — said yesterday tyre prices would increase by 12% in December and January respectively.

Goodyear’s prices would be increased from December 23 and Dunlop’s from January 8, spokesman said yesterday.

A General Tyre spokesman said the company was still considering its prices for next year, while Firestone spokesman Philip Nel said it would not increase prices in the near future.

And in a related development, the SA Tyre Manufacturers’ Conference (SATMC) confirmed yesterday it had made an application to the Board of Trade and Industry (BTI) to have a 30% ad valorem duty imposed on imported tyres.

SATMC spokesman Gert Fisher said his organisation — which represents Dunlop, Firestone, Goodyear and General — sent its application to the BTI last Friday.

He said the SATMC requested the BTI to place a straight 30% ad valorem duty on imported tyres, and to limit the quantity of imported tyres to the levels of 1988.

Fisher estimated imported tyres accounted for a quarter of tyre sales.

Tyre importer Theo Preston said tyres made in Eastern Europe and the Far East were about 25% cheaper than those manufactured in SA.

Standard locally manufactured car tyres cost about R220, compared with between R128 and R148 for imports.

A National Association of Automobile Manufacturers of SA spokesman said increased tariff protection on tyres would not affect manufacturers because the BTI’s Phase VI programme made tyres eligible for duty rebates.

He said the 12% increase announced by Goodyear and Dunlop was acceptable since it was less than inflation and the producer price index.

The industry’s application for increased protection follows the BTI’s October announcement that it would scrap duties and quantitative import control on foreign-made tyres on December 31.

According to the SATMC, passenger tyre imports rose 43% from 1.67-million kg in the first five months of 1990 to 2.38-million kg between January and May this year, while truck tyres increased 98% from 2.62-million kg to 2.76-million kg.

The present tariff is intended to increase the landed cost of tyres from between R6 and R8 a kg to the cost of locally manufactured tyres, which is about R11/kg.

Trencor, Mobile in demand

JABULANI SIKHAKHANE

TRENCOR and its holding company Mobile's rights offers were oversubscribed, it was announced today.

Trencor, a diversified industrial group, issued 2,86-million 6% convertible debentures of R51 each to raise R290,6m and Mobile raised R127,6m to follow its rights in Trencor.

The funds are to be used for the development of Trencor's manufacturing, trading, tyre, export and overseas interests.

The debentures automatically convert into ordinary shares on a one-for-one basis from July 1 of the financial year following that in which the total dividend declared is equal or exceeds 54c a Trencor share and 135c in the case of Mobile.
Activities: Manufactures and distributes wheels, high-performance tyres; distributes motorcycles and vehicle body parts.

Control: Directors 81%.

Executive chairman: El Keizan.

Tiger Wheels had a rough ride in the past year but the way ahead looks promising. Positive features of the 1991 results were a 25% advance in turnover and a 6% rise in operating income. The dominant negative was a 46% slide in earnings after four years of growth.

In particular, the wheel division ran into a pot hole. Because of problems with raw materials at the Babegli aluminium wheel factory, orders could not be met from the wholesale, retail and export divisions. This caused a £2m abnormal item, which helped to push wheel and tyre markets and making the most of international trading opportunities.

On the domestic front, the after-wheel market is showing resilience but the wholesaler tyre market remains hostile and competitive. Retail operations director Keith Rivers is cautious about development of further outlets at this stage.

Still, Keizan is confident earnings will improve this year. The shares are standing at a price of 55c and have traded in a fairly narrow range in thin volumes over the past 12 months. On balance, automotive companies offer little enticement for investors in the short term.
Firestone to

FIRESTONE's tyre prices would increase by between 6.9% and 11.7% on January 27, a company spokesman said yesterday.

Gentyre would also be notifying tyre dealers of an increase soon, the level of which was still being decided, Gentyre MD Clive Tuton said.

Firestone's price hike follows similar increases by Goodyear and Dunlop on December 23 and January 6 respectively.

In a related development, tyre manufacturers said they would attempt to gain protection by lobbying government to set safety standards which would effectively ban cheap tyres imported from the Far East. Tuton said: "We are expected to manufacture tyres to the standards of the European 'E-Mark', allowing..."
Piston to increase tyre prices soon
Firestone trying
to find a home

At this stage it looks as though Fedovks' motor component division will not be going to Murray & Roberts' industrial division. However it could end up in M & R's engineering division Genrec.

Fedovks' motor division is dominated by tyre manufacturer Firestone.

It seems that there were negotiations between M & R's industrial division and Firestone last November following the restructuring of Sankorp's assets. This restructuring involved assets in M & R, Malbak and Fedovks.

Back in October, Sankorp indicated that its long-term plan for Fedovks was to focus on service operations. This meant that another home would have to be found for Firestone and the rest of the motor components division.

The most obvious choice was M & R. Less obvious was Malbak which had recently shed its tyre interests and was probably not too keen to get Quality Tyres (which is now part of Firestone) back into its stable.

Logical fit

Sankorp chief Marinus Daling believes that M & R seemed the most logical fit for Firestone. "We believe it's a capital intensive operation rather than consumer oriented."

But this leaves things far from resolved. As Mr Daling stresses, it's up to M & R to take a close look to see if Firestone does fit and if so, where.

If M & R is not interested or cannot come up with strong enough justification for taking Firestone into its camp, then alternative plans will be made.

According to M & R chief executive Dave Brink, there were discussions between Firestone and M & R's industrial division during November. The issue was referred to M & R Holdings at the end of November but was not approved and discussions on the matter were closed.

However he adds: "Although we didn't want to proceed with it in November, the debate might be revived."

It seems that revival would depend on one of M & R's operations providing strong enough motivation. With the industrial division out of the picture, it would now be up to Genrec to make whatever running.

But, Mr Brink stresses it would not be a head office matter: "We work on a decentralised basis and we would therefore expect the individual manager to make a strong enough case."

If M & R does not acquire Firestone, then it will be back to the drawing board for Sankorp and Firestone.

As Firestone is not a listed company, there are no figures available on its size or profit performance. Industry sources indicate that the company is going through pretty tough times and appears to be suffering more than the other three players — Dunlop, Gtente and Goodyear.

Whatever happens to Firestone there is the additional consideration that the tyre industry is in need of some rationalisation. Each of the four players is making more or less the same wide variety of products which means there is little chance of economic production runs.

DAVID LOVELY who joined Murray and Roberts in 1969 and has been chief executive of M & R Industrial since 1990, has resigned with effect from end-February. He will be going to Bible College.

Apparently Mr Lovely announced his resignation during December and is currently on holiday. When asked if Mr Lovely's resignation had anything to do with possible disagreements involving M & R, Mr Brink replied: "No, I don't think so."
Shake-up threatens tyre industry

SA's four tyre makers faced a major shake-up if import protection was relaxed, sources said yesterday.

Tyre makers managed to delay the Board of Trade and Industry's decision to scrap duties and quantitative import control at end-December by appealing for increased protection.

However, analysts said if the industry failed to convince the BTI that controls were necessary, competition from cheaper imports would cut the number of manufacturers to two.

Market speculation is that PSI's Gentyre is set to buy Sankorp's Firestone. And Anglovaal's Trencor (whose subsidiary Tycon makes Goodyear) is said to be set to buy the tyre interests of BTR Dunlop.

Gentyre chairman Terry Rolfe said: "The logic behind the rumours is correct because the industry does need rationalisation. But to my knowledge no talks are taking place."

Rolfe said the market supported four tyre makers as a result of import protection. Without protection only two would survive.

"We have four manufacturers making all types of tyres. To compete against imports, companies will have to develop niches and lengthen production runs."

The change in technology from textile to steel-belt radial tyres forced the industry to spend between R100m and R150m upgrading factories, and some groups might decide to sell instead of making the investment, Rolfe said.

Trencor chairman Neil Jowell said: "There is a strong case for rationalisation, but no discussions are taking place. If government relaxes import protection, local industry will be forced to rationalise."

Speculation about BTR Dunlop selling its tyre interests was based on the group's UK parent company, BTR, selling its tyre factories worldwide to Japanese investors.

BTR Dunlop MD Clive Hooper was not available for comment yesterday.

Federale Volksbeleggings' motor component division chairman Tony Barnes said he was not negotiating Firestone's sale.

However, the group was considering repatriating Firestone and other motor division companies within the Sankorp conglomerate. Sources said Federale Volksbeleggings' motor component division would probably be placed under Murray & Roberts.
New law to limit tyre imports

Business Editor

NEW legislation is expected to limit the import of cheap tyres from the Far East to "reasonable levels," reducing pressure on SA manufacturers, analyst Jacques Pickard of stockbroking firm Davis Borkum Hare points out in an in-depth look at the tyre and rubber industries.

The legislation, due to come into force in March, is aimed at reducing tyre imports to 1986 levels.

Pickard says that the SA tyre industry is "under significant pressure due to the importation of cheap tyres from the Far East," which have captured 28% of the market.

"In 1986, tyre imports into SA amounted to approximately 9m kilogrammes and are estimated to have grown to 17m kilogrammes in 1991."

Disadvantaged

Pickard says the SA tyre industry is "reasonably efficient. Overheads are minimised by operating on a three shift, six day per week basis. Capacity utilisation in the industry is between 80% and 85%.

However, he points out, "the local industry is disadvantaged by high local prices for synthetic SBR (styrene butadiene rubber) and BR (butadiene rubber), and for nylon raw materials."

It is also disadvantaged by the small size of the market and by the need to produce tyres of high quality.

"It is probable that the Far East tyre exporters have access to favourable financing and gain advantageous fiscal credits on their tyre exports."

Pointing out that "the tyre industry is an important employer of labour and its disruption would have an adverse effect on the SA economy", Pickard says "the Board of Trade and Industries has become aware of the scale of, and reason for, the import of tyres."
Tyre makers seek import duty hike

The local tyre manufacturing industry’s application for the lifting of the average duty on imported tyres and tubes to 50% was published in the Government Gazette on Friday.

Danlop, Firestone, Gentrye and Tycon — acting through the SA Tyre Manufacturers’ Conference (TMC) — also applied for a total ban on the importation of second-hand tyres.

The Board of Trade and Industry (Bti) indicated it would undertake a full investigation into the matter.

The TMC said the local tyre industry’s share of the market had dropped to about 46% with imported products comprising about 25%.

TMC director Gert Fischer said increased competition had eroded margins to the extent that the industry’s return on investment was only 24% in 1990 before interest and tax.

He added 1991 margins were expected to be well below Sacob’s recommended minimum return of 31% on capital employed.
Conshu loses 9\% in earnings

WILLIAM GILLILLAN

CONSHU Holdings has attributed a 9\% drop in earnings to R13,9m from R15,2m in the six months to December to the closure of a factory at its 84\%-held subsidiary Wayne Manufacturing.

The factory, Phoenix Rubber in Durban, was closed after a supervisor was shot at the factory gates last July.

"The factory became unmanageable after this incident," said Conshu CEO Robert Feinblum.

Increased competition from imports and the recession in SA also contributed to shoe manufacturer Conshu’s moderate 4\% rise in turnover to R323m from R317m. Operating income fell to R31,6m from R35,7m despite the higher turnover.

The operating margin, down to 10\% from 11\%, was lower largely because Conshu management decided to take the Phoenix closure costs above the line. (As the costs were of a non-recurring nature they could have been taken below the line in the form of an extraordinary item).

Export incentives reduced the group’s tax rate to a relatively low 41\%.

"Our exports have increased substantially and we are predicting export turnover of about R17m in the year to end-June," Feinblum said.

Referring to the Wayne Manufacturing subsidiary, Feinblum said its turnover had declined marginally to R61,5m from R62,7m in the six-month period.

However, the loss in turnover as a result of the Phoenix factory closure had been offset by the inclusion for the first time of about R10m in turnover following Wayne’s acquisition of Rubber Products & Mouldings (now called Wayne Rubber Western Cape) in July last year.

The Phoenix factory had now been broken up and its production relocated at four other Wayne divisions.

Despite the drop in earnings a share at both Conshu and Wayne, the interim dividend has been maintained at both groups. Conshu declared an interim dividend of 11,2c a share on earnings down to 30,1c from 33c a share. An interim dividend of 1,72c a share was declared on earnings a share of 4,8c (5,4c) at Wayne.
BTR Dunlop hurt by imports

TYRE and rubber product manufacturer BTR Dunlop has disclosed a 16% drop in attributable earnings to R56.6m for the year ended December.

MD Clive Hooper said the decline in earnings was due to the recession and increased import competition in the tyre replacement market.

He added that car sales in 1991 dropped by 8% on the previous year which also adversely affected the group’s sales.

Earnings came in at 23c (1990: 28c) a share. The dividend payout was maintained at 16c a share which was in line with the previous year. However, the dividend cover slipped marginally to 1.5 times from 1.7 times.

Sales dropped 4% to R672m (R700.6m) while operating profit fell by 25% to R101.2m (R135.2m).

The decline in operating income relative to sales showed the operating margin was down to 15% compared with the previous year’s 19%.

In addition, finance costs for the year rose by 30% to R11.5m (R8.9m), adding further strain to the decline in earnings. However, a much lower tax bill of R3.1m (R68m) helped soften the drop in bottom-line earnings which amounted to R56.6m (R67.4m) for the year.

Hooper said the company’s performance was negatively affected by a drop in mining industry projects and car sales during the year.

He said imported product competition created additional pressures.

“Substantially increased imports of new and second-hand car and truck tyres, as well as used tyre casings for retreading, have adversely affected Tyre’s results.

“These imports accounted for 25% of the replacement market and over half originated from the Far East.”

Further to its R100m capital expenditure programme launched in 1990, Hooper said BTR Dunlop planned to invest additional funds in coming years to expand its interests in the steel car, light and heavy truck tyre markets “to meet the swing to these products in the marketplace.”
Overseas operations help Trencon to defy recession

CAPE TOWN — Overseas operations and exports enabled the diversified Trencon group to defy recessionary trends in the local economy and produce a 22.8% rise in earnings in the six months to end-December.

Trencon is involved in the manufacture and export of containers. It manufactures trailers and operates in the transport and tyre sectors.

An interim dividend of 42c (35c) was declared on earnings of 312c (294c) a share.

An improved year-on-year performance in foreign currency terms was made by Trencon’s overseas operations which, together with exports, contributed about 40% of the group’s total earnings.

The world container market had been stable and the export of container-carrying vessels, Trencon chairman Neil Jowell said yesterday.

On the local market the group’s broadly spread transport interests — which represent about 19% of total-line earnings — did better than last year, but the engineering and tyre divisions fared worse as the recession took its toll on these sectors.

Turnover rose 22.8% to R478m (R390m) but as the mix of business changed in favour of the high turn-over low-margin tyre business, margins slipped to 14.8% (15.6%) and operating income showed only a 16.4% rise to R71m (R61m).

A sharp cut in interest-bearing debt saw finance charges drop to R11m (R10m). Attributable income of R45m (R36m) was notched.

Trencon’s convertible debenture issue to raise R260m happened too late to have much effect on the interim results, but Jowell said the money raised would contribute an estimated net income of R13m to the final results.

Plans were in place to spend the money raised on expanding existing businesses. Opportunities were being “actively developed” but Jowell did not believe the bulk of the money would be spent by year-end. About R25m of the funds were used to cut interest-bearing debt to R40m, bringing gearing down to 6% (27%).

Year-end results would show an improvement but would be lower than last year’s 26.5% increase, Jowell said. A slowdown in the rate of growth was forecast for the next six months.

The international container market was weaker because more capacity had come on stream. In the final two to three months of the financial year containers would be exported on contracts concluded on less favourable margins.

Trencon’s parent, Mobile Industries, which has a 48% stake in Trencon, produced interim earnings of 70.1c (63c) and declared a dividend of 10c (8.2c). Its 74%-held subsidiary, Mobile Acceptances, which is involved in financing and leasing, produced “satisfactory” profits.
BTR Dunlop verdict due today

SA's longest strike by more than 900
BTR Dunlop workers could be closer
to resolution if an Appeal Court hear-
ing today rejects BTR Dunlop's ap-
peal against a 1989 Supreme Court
decision in favour of the union.

The Supreme Court decided the
president of the Industrial Court
should have recused himself as he
had associated himself socially with
BTR management. BTR wants that
decision set aside so the Industrial
Court judgement — that the dismiss-
al of strikers was legal — would hold.

Ex-BTR worker and Numsa organ-
iser Phillip Diadla said the majority
of workers dismissed in 1985 were
still unemployed, meeting regularly
and demanding their jobs back.

He said their dismissal had a dev-
astating effect on Howick as BTR
Dunlop was the major employer
there. But the union had organised a
T-shirt and agricultural co-op which
had provided income for some.

Diadla said Numsa's campaign to
get the dismissed workers reinstated
had been one of the biggest waged by
the union movement. This included:
□ Numsa representatives attending
BTR's general meeting every year to
put the strikers' position;
□ An international tour by a drama
group of Sarnoc workers; and
□ Solidarity action by Dunlop work-
ers in SA and abroad.
Tiger Wheels’ sales up

Tiger Wheels’ sales rose by nearly a third in the six months to December 1991, but it was not enough to stop competition from imported tyres battering profit margins and reducing operating income by nearly a fifth, today’s published results show.

Sales rose 27% over 1990 from R39.6m to R39.9m but operating profit fell from R3.2m to R2.6m due to a drop in operating margins from 10.4% to 6.6%. Tiger Wheels CEO Eddie Keizan said domestic and export retail sales were up.

Exports had grown significantly and Tiger’s Babalegi plant would be expanded to cope with growing demand, Keizan said. However, uncertainty regarding the outcome of the referendum forced the group not to disclose too much information about export activities.

The re-imposition of tyre import quotas would hopefully stabilise prices as the local industry had faced tough competition from imports last year, Keizan said. Without the quotas, retrenchments and production cuts would have been inevitable.

Earnings increased 36.4% to R1.4m, but this was off a low base because the group had to absorb a R2m abnormal item in 1990 relating to faulty materials. Earnings were equivalent to 4.7c (1.1c) a share.
Tyre manufacturers to lobby govt over imports

THE Tyre Manufacturers’ Conference (TMC) plans to lobby government in coming months to allow the R1,6bn-a-year tyre industry to import raw materials instead of sourcing locally, said TMC chairman Gert Fischer.

This follows an application earlier this year by the TMC — representing the country’s four tyre manufacturers: Dunlop, Firestone, Gentyre and Tycoon — to raise average ad valorem tariff from 25% to 50% on all new imported tyres and tubes and a total ban on importing second-hand tyres.

Fischer said, for instance, tyre manufacturers were forced to buy synthetic material from Sentracem’s Karbochem plant in Newcastle. The industry had on numerous occasions applied for import permits for synthetic rubber, but these had been turned down by government.

Dunlop MD Clive Hooper backed Fischer’s view. He said the company would like import controls lifted on raw material.

“We support seven single source suppliers in this country and we feel the supply chain in the tyre industry should be liberalised, not just tyre manufacturing,” Fischer said.

Fischer said the availability of cheaper raw materials would enable the tyre manufacturing industry to become internationally competitive.

“In the current environment, the SA tyre industry cannot compete on equal terms with foreign manufacturers as a result of significant and entrenched socio-economic, financial, technical and structural disadvantage.”

These imbalances created barriers to the relaxation of trade regulations and import protection measures would be necessary to ensure the long-term viability of the industry, said Fischer.

Trade and Industry Board import control director Piet Barnard said import permits for synthetic rubber were turned down as a protective measure for local synthetic rubber producers.

He said government had given the tyre industry an undertaking to keep import controls on tyre products in place until December 1992 and import controls on rubber products for tyres in place until June 1993.

The industry applied for higher tariff duties for local manufacturers’ share of the local replacement market eroded to just 45%, with imported new and used tyres claiming 55% of the market, said Fischer.

The number of imported tyres in the second half of 1991 rose in spite of the existence of import controls, tariff duties, formula duties and even voluntary trade restraint on the part of Japanese tyre exporters, he added.

Japan accounted for 50% of SA’s tyre imports, he said.

Tyre Dealers’ Association executive director Vic Fourie said the doubling of this ad valorem duty would control or prevent the import of inferior standard tyres.

There was a glut of new car tyres on world markets, he said.

The industry had also been knocked by the recession. Dunlop’s Hooper said production had dropped from 100% of capacity in 1989/90 to about between 60% and 65% of production capacity in 1992.

Fischer said the industry was operating at an average 70% of production capacity this year.

Silver lining in the furniture sector

RESULTS posted by major furniture groups reflect the full extent of the decline in consumer spending.

Analysts said yesterday that although they expected results from major furniture groups to be below those of the previous year, the extent of the fall in earnings was disappointing, especially at an operating level.

But they also said they would have been even more worried if furniture companies reported good results, as this would have implied increased sales on credit.

Results came on the back of dramatically reduced sales over the 1991 calendar year. Figures from the Retail Liaison Committee show that overall sales of furniture, appliances, TV and audio equipment grew by only 6.6% at current prices compared with 25.8% in the previous year.

Recently Rusfern reported a R44m loss, Ellerine a 32% drop in interim earnings and the JD Group a 37% fall in earnings for financial 1991. Results from Amrel and manufacturer Afcol are expected to follow this trend.

In the office furniture sector, Mathieson & Ashley’s interim loss of R1,3m reflects its first reported loss since 1985, while Grant Andrews reported a R4,1m loss and announced it would delist from the JSE.

But analysts said that with weak consumer spending, especially on durables, companies would have had to loosen credit facilities and survive on suspect debt to show any growth.

Most of the major retailers had instead prudently controlled debt and were “sitting back and waiting”. When the economy did recover, furniture companies would show an excellent turnaround in results — although on a low base — and they should benefit more than many other industries, in an upturn, they said.

An analyst said Ellerine’s results had been good, bearing in mind that they included a nine-week strike over its busiest period. JD Group, which most analysts rate as the second-best performer to Ellerine in the furniture sector, had been “a bit disappointing”.

Analysts said that although furniture shares had corrected lately and longer term prospects looked good, it was not time to buy shares yet.

They said the furniture companies could expect at least another six months of tough conditions, but most were sitting on good yields.

Gentyre rides rough road with unchanged dividend

Finance Staff

A five-week strike added to the woes of a depressed economy for Gentyre in its 1991 year when the market for tyres fell by between eight and 10 percent.

The directors say lower profitability was further affected by a substantial increase in imported passenger tyres and used casings and widespread discounting in the industry.

Earnings a share fell to 392c from 442c in the previous year. However, dividends for the year were unchanged at a total of 112c with a final of 57c.

The industrial products division maintained sales and profits at 1990 levels in spite of severe cutbacks in the level of spending, particularly in the mining industry.

The group maintained a high level of liquidity, giving a 55 percent increase in interest received.

Local market volumes are not expected to increase substantially in the current year but prospects for exports are brighter.

New markets have been opened up for South African manufacturers as a result of the changing political climate, and Gentyre has pursued these opportunities.

The results will be shown in 1992 sales.
Activities: Manufactures tyres, industrial products and sports goods.

Control: BTR plc 81.9%.

Nevertheless, MD Clive Hooper argues that BTR Dunlop did well to achieve a 15% profit margin through tight cost control. This seems to be reflected in the balance sheet. Debtors were reduced by 2% and stock increased by just 1%, though creditors were down by about a fifth. Financailly, BTR Dunlop looks healthy. The balance sheet is effectively ungeared.

But if BTR Dunlop's financial strength poses few problems, the uncertainty of the trading environment poses many. Its products are broken down into three divisions, the most important being engineering and industrial, with about half of sales, trading profit and assets. Last year, it made the longest ever steelcord belt in SA, for an overseas project. Despite the decline in demand for mining products, the overall margin improved and its share of trading profit increased from 45% to 48%.

The motor division, made up predominantly of tyres, accounts for 40% of sales, trading profit and assets, though its share of trading profit has fallen from 44% to 40%. In 1991, tyre industry production fell by a tenth.
Depressed market batters Gentyre

GENTYRE’s earnings in the 12 months to December 1991 were battered by depressed market conditions, competition from imported tyres, widespread discounting and a five-week strike, today’s results for the 69% held W & A subsidiary show.

Turnover fell 7% to R84.4m from R89.2m in 1990. Operating profit dropped 17% to R52.8m from R64.1m. Income from interest rose to R7.8m from R4m. Taxed profits amounted to R61.3m compared with R81m in 1990. After minorities and preference dividend payments of R89 000, attributable profit was 11% lower at R61.2m than 1990’s R61.3m.

Profitability was affected by a five-week strike in the tyre division, an 8% to 10% real decline in the tyre market, an increase in imported passenger car tyres and re-used casings, as well as widespread discounting in order to maintain market share, the directors reported.

The industrial products division, which manufactures industrial rubber products and which in 1990 contributed 14% of turnover, maintained sales and profits in 1991 in spite of cutbacks in the level of spending in its markets. Increased interest income reflected ongoing management of working capital and a high level of liquidity. Local market volumes were not anticipated to increase substantially in 1992, but international markets had opened for SA manufacturers as a result of the changing political climate in the country, the directors reported.

Curnow sales up, but earnings fall

AUTOMOTIVE paint finishing supply group Curnow M & G increased sales by 14% to R44.6m in the 12 months to December 1991, but efforts to maintain dominant market share plus increased finance charges saw the W & A associate’s earnings fall by 17.7% to R1.02m.

Curnow chairman Alan Schlesinger said yesterday turnover increased in spite of tough competition. However, to maintain dominant market share, prices were dropped and gross profit margins fell from 8% in 1990 to 6.5% in 1991.

As a result operating income fell 10.3% to R2.6m from R3.1m. Finance charges increased to R331 000 from R61 000. Taxed profits fell by 17.7% to R1.02m. An extraordinary item of R71 000 was incurred relating to the closure of one of its 19 branches.

Financial director Michael van Niekerk was optimistic about this year’s prospects because the company had been streamlined and the first two months had been financially successful. The company would benefit from any improvement in trading conditions, Schlesinger said.

Earnings a share fell to 4.6c from 5.6c last year and a final dividend of 1c a share was declared bringing total dividends to 2c (2.6c) a share.
M&R drives further into motor industry

EDWARD WEST (196)

MURRAY & Roberts (M & R) has bought tyre producer Firestone SA, spark plug and component manufacturer Trichamp Components and shock absorber company Gabriel SA from Federale Volksbeleggings for R210m.

M & R said in an announcement published today that the acquisitions would strengthen and diversify its specialised engineering interests, broaden their range to include strong brand names and substantially increase market share.

The purchase consideration would be settled by the issue of M & R renounceable shares, it said.

M & R could also elect to take over additional liabilities of the interests being acquired, in which event the purchase consideration would be adjusted accordingly.

If the acquisitions had been effective on July 1, 1991, they would have increased M & R’s half-year earnings to December 1991 by 6% to 3.086c from 2.912c a share. Net asset value would have increased by 10.6% from 2.127c a share to 2.353c.

The sale of Federale Volksbeleggings’ automotive interests is in line with its previously stated strategy to concentrate on leisure market segments ahead of its listing in the beverages, hotels and leisure sector of the JSE later this year.

M & R has an exposure to the motor industry through subsidiaries dealing in, among others, components, spares, and brake and power transmission systems.
As expected, Federale Volksbeleggings has sold its motor interests to Murray & Roberts (M&R) for R210m in renounceable M&R shares. Sankorp CE Marius Daling says the sale is on an earnings multiple of about 7.5. The deal includes all of Firestone, 35% of Gabriel Shock Absorbers and 94% of Tri-champ Components.

Federale, the once-mighty Afrikaans conglomerate, is now left with an — admittedly high quality — portfolio of investments in services, including control or joint control of Interleisure, Teljoy, Avis, Interpark and Price Forbes.

Federale MD Peet van der Walt says that its unbundling is over at last, with the relatively minor exception of Continental China, which evidently was not wanted by the other Sankorp conglomerates, Malbok or M&R. He also says the group, which will be renamed Surfego, will announce a major acquisition in the services field this month.

Indeed, market speculation is that the deal will be disclosed in an Afrikaans financial journal this week, which will introduce the investing public to Surfego.

As the FM has pointed out, Firestone is not a perfect fit for M&R, though it is clearly the least bad fit within the Sunlam-friendly groups. Malbok, after its experience with Quality Tyres, in which it was let down by unsound management practices, is not enthusiastic about the tyre industry.

Tyres are a highly competitive consumer marketing business as well as an engineering business. Firestone, Goodyear, Dunlop and Gentyre are believed to have about a quarter of the market each, though market share figures are not published. Firestone also has to compete with imports, but perhaps not for much longer.

The Tyre Manufacturers’ Conference has called for a ban on imported second-hand tyres and an increase in duties to 50% to protect the four groups. But the industry’s long-term future must be questionable, though it will compete on a more even footing with imports when it no longer has to buy synthetic rubber from Sentrachem.

Had the date of acquisition been July 1, M&R’s EPS for the six months to December would have increased by 4.8% to 214c, and net asset value by 6% from 2.912c to 3.086c, including intangibles. Tangible NAV would have increased by 10.6% from 2.127c to 2.353c. While the deal should do no harm to M&R in the short run at least, it is not big enough to warrant any upward rerating.

Stephan Canteros
Sabta to act on tyres ‘unsuitable’ for SA heat

IMPORTED tyres tended to burst in SA’s warmer temperatures and were the major cause of accidents involving taxis on national roads, Sabta communications manager Molefe Rapodile said yesterday.

Sabta would take up the issue with local manufacturers to get them to introduce a tyre suitable for the SA taxi industry, Rapodile said.

With the SA Taxi Safety Action Group, Sabta would ask the SA Bureau of Standards (SABS) to conduct tests and see if SA manufacturers could design a tyre that would meet taxi specifications.

Rapodile said suppliers were importing a type of tyre not suited to SA conditions. "Climatic conditions, where these tyres are imported from, are not the same as in SA and the tyre, which is not designed for the heavier passenger intake of the SA taxi in the first place, simply bursts under the warmer temperatures in this country."

"We will take the issue up with local tyre manufacturers to get them to design tyres with specifications suited to the SA taxi industry," Rapodile said.

"Some unscrupulous dealers are importing second-hand tyres and dumping them on the taxi market," he claimed.

SA Tyre Manufacturers Conference director Gert Fischer confirmed that some tyres fitted on taxis were imported cheaply by dealers. Tyres manufactured in SA were tested by SABS for their ability to operate in SA conditions, he added.

"But even the best tyre is bound to burst if taxis are overloaded, as was the case at the weekend when a taxi carrying 27 passengers overturned," said Fischer.

National Association of Automobile Manufacturers of SA (Naamsa) assistant director Costa Pierides said one in three accidents among taxis was caused by a tyre burst.

He said much of the blame lay with the taxi operators themselves because, to smarten their vehicles, they fitted whitewalled, imported tyres in place of the originals.

"Tyres are engineered for a certain type of vehicle," said Pierides.

Some of the major causes of tyre bursts were overloading of vehicles, the wrong type of tyre, and incorrect inflation.

"Any tyre will burst under an overload, and the constant friction of under-inflated tyres causes a burst," said Pierides.

If discipline was maintained, vehicles were kept in roadworthy condition, and there was no overloading, the accident rate would come down, he said.

Stavas Servas, chairman of the Taxi Safety Action Group, said some suppliers were importing second-hand tyres from Europe and that put people’s lives at risk.

"Locally manufactured tyres are designed for SA conditions and are backed by the SA Bureau of Standards."

Servas also warned: "You should not fit a passenger tyre where a commercial tyre should be fitted."
**Take the money!**

On the face of it, this week's effective 260c-a-share cash offer to minorities is a good one. But there are a few interesting aspects.

At first, the payout was to be 250c (Fox April 3). This has been revised to 260c. Not worth put at 186c (Longmile's calculation) as at June 30 will be enhanced to 247c on January 1 by the receipt of R120m from the sale of the 18% interest in Contred. However, results for the half-year to December have not yet been published, so shareholders can't see how this figure is arrived at or how their company traded in the six months.

In the 1991 annual report, fixed assets include two freehold properties valued at R15.5m.

One is valued by the directors at R1.46m in November 1969 with additions stretching from 1979-1991 costing a further R547 000; the other has a directors' valuation as at October 1978 of R99 000 with additions in 1988-1989 valued at R457 000. It would be interesting to have sworn appraised values of these to know their current worth and how, if at all, net worth would be affected.

In trying to calculate the value of assets remaining after the transaction with Contred and paying out minorities at 260c a share, it is necessary to know the book value of the investment sold to Contred. The 1991 annual report is unclear in this respect. But in any event, the controlling shareholders will be left with clean, ungeared assets.

This is an improvement in their situation and could, rightly, be viewed by minorities as enhancement at their expense. It can be argued that minorities therefore deserve a premium if they are compelled to surrender their participation.

Since Longmile was issued at 230c in 1987, it has never traded above that level. Furthermore, as pointed out in this week's announcement, the directors do not expect to be able to maintain EPS at the present 30c a share. At 260c the operation would offer an earnings yield of 11.5%, hardly attractive in the light of available interest rates. The cash must therefore be attractive.

On balance, while aspects of the offer can be quarrelled with, it seems best to accept and leave the controlling shareholders with their clean assets. Especially if (trading) liquidity is important for the investor, many quoted investments offer far better potential than the history of Longmile suggests could be achieved by staying in it.

Gerald Wintana
'Job cuts no answer'

The tyre industry would face tough union opposition if it tried to counter the lifting of import controls with job cuts, a NUMSA spokesman Les Kettle said in Cape Town yesterday.
HANOVER -- Germany's tyre maker Continental and its Italian counterpart Pirelli might be in a position to reconsider a close business co-operation in two or three years time, Continental's chairman said yesterday.

Separately, officials of the two companies said Pirelli had filed a motion to discuss the elimination of Continental's 5% voting rights limitation at Continental's annual shareholders meeting on July 2. The limitation restricts outside shareholders to a 5% voting right regardless of the size of their stake.

Continental chairman Hubertus von Gruenberg, at a news briefing yesterday, called the Pirelli request "hostile" on the grounds that Pirelli was a competitor of Continental.

Von Gruenberg said that despite Pirelli's planned move at the shareholders' meeting, he still saw the possibility of co-operation in the future.

"We have never ruled out" a possible co-operation with Pirelli, Von Gruenberg said, even though the most recent talks over business links between the two companies broke off late last year without success.

Pirelli officials in Milan confirmed their company had made a proposal to debate Continental's voting limitation.

Von Gruenberg said Continental's aim was to rationalise its operations and bring unprofitable units back into the black before considering close ties with another tyre maker.

He said Continental itself saw the benefits of partnerships in the depressed international tyre market.

At the moment, Continental needed to concentrate on building profits rather than on setting up business co-operatives Von Gruenberg said.

"We need our entire energy to improve General Tyre," the US subsidiary that still was losing money in a depressed North American market, he said.

Von Gruenberg said price competition remained severe in markets, although unit sales of tyres had improved.

He said that Continental and Pirelli continued in "friendly contacts" with each other as competitors. Continental is trying to buy some of the technical products lines Pirelli has up for sale at present.

Continental is one of the few tyre makers which expects to be profitable in 1992, although it lost DM122.2m after taxes in 1991 due in part to extraordinary charges related to the closure of a plant in Canada.

Continental is the world's fourth-largest tyre maker, while Pirelli is ranked number five. — AP-DJ.
GENTYRE

Need for reflation

This company needs to be — dare we say it? — reflated. The report contains information which the market had partly anticipated. EPS fell 11% to 392c and maintained dividends of 112c out cover to 3.5 times from the previous four.

One consequence was that the share hit a new low last week of R2.1.

In a poor year for the economy, turnover fell for the first time in six years, by 7%. Chairman Terry Rolfe says forlornly: "A pick-up in economic and mining activity would improve the unsatisfactory returns." At least he's in good company with that plea.

The business is concentrated significantly in tyre manufacturing, which generates fully swings in debtors and creditors, indicative of intelligent management footwork, but more significantly by sound tax management.

A 1990 charge of only R203 000 was converted into a R684 000 credit. Tax in 1993 should be no more than 25%, says the report.

How does Gentrey intend to apply its cash mountain? Rolfe says there are a number of exciting possibilities, but he will not tell whether the company is contemplating new ventures or acquisitions.

Rolfe is emphatic that import protection remains vital for the industry. Partial lifting of protection last year led to a rash of imports, much of it at the lower end and of poor quality, but enough to create instability. He cannot see why, in the motor industry, tyres should be singled out for this treatment. Heding their bets somewhat, the directors say that "given stable operating conditions," EPS should recover this year. Investors will certainly expect this, but Rolfe warns that earnings won't match inflation.

Industry volumes in 1991 fell by about 10%; so Gentrey did comparatively well by hanging on to market share. Lying shroud are the prospects of new developments. Given Rolfe's undeniable enthusiasm, they could be exciting and profitable. However, the stock has underperformed the industrial sector over the past year. It is now on a p/e of 5.35 against the sector's average of 7.2.

This might be a good time for an investment but the market will want to see a solid performance before reating the share.
Lower margins, higher tax a blow to Sondor

CAPE TOWN — Rubber and plastics converter Sondor Industries generated a 29% rise in turnover in the year to end-March: R106.2m, up from R82.5m. However, lower margins and interest received plus a higher tax rate affected bottom-line performance.

Earnings slid 17% to 10.66c (12.86c). A final debenture distribution of 15c a debenture or 5c a share brought total distribution to 30c a debenture or 6c a share.

Turnover increased to R246.6m (R132m) but margins slipped to 19.3% (24.3%) as the recession took its toll on Sondor’s main markets — the building, construction, automotive and original equipment sectors. Pretax operating profit was marginally higher at R4.7m (R4.66m) while after-tax income suffered from a rise in the tax rate to 48% (40%).

Sondor chairman Sonny Goldman said the slight decline in pre-tax income could be attributed largely to the high cost of bedding down the newly acquired Fife Tape Converters, to be renamed Sondor Tape Converters. However, this division should show a profit turnaround this year.

Sondor was budgeting for a modest improvement in earnings this year. “The company holds a major share of its targeted domestic markets and it has made progress in installing in-house manufacturing capability” to reduce its dependence on certain imported raw materials. It was strategically placed to take advantage of any upturn, Goldman said.
Union breakthrough on job security

IN A breakthrough for job security, the tyre and rubber industry has agreed to extend its moratorium on retrenchments for another year.

But Numsa still plans to ballot its tyre and rubber members on strike action — together with auto, motor and metal and engineering workers.

In response to Numsa's demands for a job moratorium, employers in both the auto and metal sectors have made offers to create funds to retrain retrenched workers.

Sefisa said it was prepared to establish a jointly funded trust, increase severance payments to retrenched workers and amend security of employment provisions to avoid or limit retrenchments.

The parties in all sectors remain far apart in wage negotiations, while Numsa's demand for guaranteed job security is still on the table in the auto, motor and metal and engineering sectors. A Sefisa spokesman said the chances of a settlement before the end of June were remote.

The NUM has handed a profit-sharing proposal to the Chamber of Mines, which said it would respond this week. The chamber has increased its offer for gold mines from 4% to 5%. The offer for coal mines ranges from 7% to 12%.
Mixed success for Darmag

RUBBER AND plastics producer Darmag announced a final dividend of 2.25c a share for the year to end-March 1992. Dividends will be paid on August 7.

And in its annual review it forecast a slight earnings improvement in the year to March 1993 with a marginal increase in lead acid battery casing volumes and new plastic product lines, chairman Donald Buchanan said.

The discontinuation of the group’s tyre division would relieve the group of an burden, he said.

New product lines such as plastic crates would allow Darmag to continue growing in spite of a weak economy.

A large proportion of the R2.5m capital expenditure programme was invested in a specialised injection moulder which made industrial battery cases. This plant had provided an additional manufacturing facility.

Darmag’s results reflected mixed success due to recessionary markets, Buchanan said. Turnover dropped 5.8% to R24.7m (R26.2m) while earnings a share climbed by 17% to 10.3c from 8.8c.
Union now confident in BTR case

By FERIAL HAFFAJEE

The long march of almost 1,000 British Tyre and Rubber (BTR)-Sarmcol workers, dismissed from the British multinational in 1985, is not over. But it may now be a lot easier.

The Appellate Division last week ruled that the case should be reinserted in the industrial court. This week, the company reacted angrily, accusing the court of not "ruling on the merits of the case".

But lawyers and the National Union of Metalworkers of South Africa (Numsa) — whose members were dismissed — welcomed the decision.

The political climate and more enlightened labour law made them confident of a decision in favour of reinstatement.

"I would rather be fighting the case in 1992 than in 1985," John Brand, the attorney for the dismissed workers, said this week.

He said the workers now had a right of appeal in the Labour Appeal Court, legal precedent gave them a greater chance of reinstatement and current labour law provided better protection for strikers.

In 1989 the supreme court ruled that the behaviour of one of the presiding officers of the industrial court could have been construed as showing bias. The officer in question — also the deputy president of the industrial court at the time — attended a seminar hosted by Andrew Levy and Associates, industrial consultants to BTR-Sarmcol.

Delivering the appeal decision this week, Judge Hoexter said: "In our law, the existence of a reasonable suspicion of bias satisfies the test."

He added: "If a judicial officer has any interest in the matter before him, he is disqualified, no matter how small the interest may be."

The company this week issued a veiled threat, saying that the judgment had serious consequences for judicial officers "attending organised seminars such as the one arranged by the Centre for Socio-Legal Studies which two appeal court and other industrial court judges attended."

The company also questioned whether approval was necessary every time a judge wanted to attend a seminar.

BTR-Sarmcol this week stuck by its guns, saying it "is confident of the merits of the case" and that it "did not commit any unfair labour practice".

Numsa representative Gavin Hartford this week welcomed the decision. "It vindicates Numsa's position," he said, adding that the union believed it "had a strong case and were a lot more hopeful for the new trial". 

Long battle ... The 1985 BTR-Sarmcol strike was one of the most acrimonious ever in South Africa
Firestone appoints a new managing director

By Stephen Cranston

Gavin Hardy has been appointed MD of Firestone South Africa from July 1.

He replaces Bill Taylor, who becomes deputy chairman until his retirement in March next year.

Mr Taylor will help Mr Hardy in planning long-term strategy for the company.

Mr Hardy is chairman of Firestone and an executive director of Murray & Roberts Engineering.

Mr Taylor says that Firestone is spending R120 million upgrading its existing plants, of which R90 million will be spent on the Brits factory.

Mr Taylor is confident that Firestone will be able to gear up for the export market.

Firestone SA has been locally owned since 1981 when Federale Volksbeleggings bought control from Firestone's American parent. Federale sold it on to Murray & Roberts about three months ago.

Firestone is one of the three biggest brand names in tyres internationally.

Its main international rivals are Goodyear and Michelin.
The tree that feeds various industries

Natural rubber latex is obtained from a tropical tree, which is grown in plantations mostly in the Far East.

Originally it came from Brazil, but as the trees grew in jungles, no substantial plantation rubber industry was developed in that part of the world.

The rubber tree grows under tropical conditions at a temperature of about 32 deg C and a relative humidity of more than 90 percent.

Rubber latex in liquid form is obtained from the tree by tapping. In other words, the bark is carefully cut with a specially designed tool, in the process of which rubber-bearing vessels are also cut, resulting in the flow of a milky liquid from the tree. This milky liquid is latex.

In order to prevent latex solidifying, it has to be preserved with anti-bacterial agents, of which not more than 0.8 percent is present in the material.

Rubber as it comes from the tree varies in concentration, but is usually between 30 and 36 percent suspended in the water serum, which comes from the tree.

Because it would be wasteful to ship such large quantities of water to the user countries, latex is centrifuged, whereby its rubber content increases to about 60 percent.

This type of material is then used by various industries.

Despite a wide range of applications, latex accounts for only 15 percent of total natural rubber used.

The most advanced manufacturer country, whose manufacturing processes are backed up by intensive research and technological development, is Malaysia.

The advances in the botanical field have been fantastic. For example, 30 to 40 years ago the yield from an acre of plantation a year in solid rubber was approximately 180 kg, whereas today it is approximately 1500 kg.
SA firm is Africa's sole producer of synthetic rubber.
Firestone restructures

FIRESTONE'S recent move from the Federale Volksbeleggings fold to Murray & Roberts Engineering has brought on restructur- 
ing at the tyre manufacturer. Firestone chairman and 
MD Gavin Hardy said the company had been restruc-
tured into three new, corpor- 
ate businesses: Brits 
Manufacturing, Port Eliza-
abeth Manufacturing and 
Sales and Distribution. 
Each unit would be operat-
ed by a general manager. 

Hardy was appointed fol-
lowing the restructuring. 
The company also planned 
to relocate certain market-
ing and administrative 
functions from Port Eliza-
abeth to the Reef next year. 
Hardy said. 

At the end of this month 
Firestone would complete 
a R60m upgrading pro-
gramme at its Port Eliza-
abeth plant. By the end of 
February 1993 the company 
would also have invested 
R60m in new machinery 
and increased production 
capacity at its Brits plant.
Young firm captures slice of market

RUBBER INDUSTRY

Steppeing out of the footwear industry

Longer-lasting tires on the cards in

Projected performance

The company's projections for the coming year show significant growth in sales and profits. This is expected to be driven by increased demand for the company's products, as well as continued innovation in manufacturing processes. The company plans to invest heavily in research and development to maintain its competitive edge in the industry.

Financials

The company's financial statements show a steady increase in revenue and profit margins over the past several years. This growth has been attributed to a combination of effective pricing strategies and efficient production processes. The company remains committed to maintaining its focus on profitability and shareholder value.

Market Analysis

The industry is projected to experience continued growth in the coming years, driven by increasing demand for high-quality products. The company is well-positioned to take advantage of this growth, with a strong product line and a reputation for excellence.

Competitive Landscape

The company faces competition from several large players in the industry, but its focus on innovation and customer service sets it apart. The company continues to invest in new technologies and processes to stay ahead of the competition.

Strategic Plan

The company's strategic plan includes continued investment in research and development, as well as expansion into new markets. The company is also exploring opportunities for partnerships and acquisitions to further enhance its position in the industry.

Conclusion

The company is well-positioned for continued success in the coming years, with a strong focus on innovation, customer service, and profitability. The company remains committed to delivering high-quality products and maintaining its leadership position in the industry.
Rubber man... John Lithgow, projects manager at Karbochem, said that as much as 70 per cent of the rubber industry's products go into the motor industry.
Haggie to set up R96m tyre cord factory

HAGGIE is to set up a R96m tyre cord factory in Boksburg following a technology transfer agreement with the Belgian firm NG Bekaert.

Bekaert is a leading manufacturer and supplier of tyre cord, the fine steel wire strand used as reinforcement for steel radials.

Haggie spokesman Colin Horner says Bekaert's side of the deal involves the R52m supply of necessary specialised manufacturing equipment and product and process technology.

The plant, scheduled for gradual commissioning next year, will generate about 200 jobs and should save R60m a year in foreign exchange.

All of the estimated 6 000 tons of tyre cord used locally every year is imported.

The venture will combine Haggie's high-tensile steel wire technology with that of Bekaert in the tyre cord technology field.

Haggie MD Chris Murray says local production will simplify supply logistics for local tyre manufacturers.

It will also increase the export potential of locally manufactured steel radial tyres.

He forecasts that the local tyre cord market will grow with the economy and with an increasing move away from traditional textile-reinforced tyres to steel radials.

The project continues Haggie’s diversification into a broader area of wire products, copper-base products and engineering consumables.

Its foreign markets include North America, Europe, Australia and the Far East.

Last year, almost 20% of its R1.2bn turnover was exported to more than 80 countries.

Haggie also has manufacturing operations in England, Zimbabwe and Zambia.

The group margin narrowed slightly from 12% to 11%. Prices must have plunged as group turnover fell from R26.2m to R24.7m despite the higher volumes.
Chairman Donald "Buck" Buchanan, noting that activity in the first three months of this year did not meet expectations, says the prediction, in Darmag's annual report, of marginal earnings growth in 1993 is optimistic. He now expects earnings to be maintained.
On a brighter note, the balance sheet strengthened even though capital expenditure increased from R417,000 to R2,535m. This was due to tight working capital management, which saw the year-end figure reduced from R5.3m to R1.9m. Close attention to working capital must have been initiated early last year, given the sharp drop in interest charges from R980,000 to R290,000. EPS increased as a result.
The group has been looking for investment opportunities for some time (now, especially, to replace the tyre operations), but Buchanan says these are limited, as most opportunities have been exploited where there are low barriers to entry. He adds that there are opportunities in areas requiring large capex.
Much of last year's capex was invested in a specialised injection moulder, to replace an old machine used for making industrial battery cases. The consumer market here is larger than the industrial one. The new machine also makes other large plastic products so Darmag is set to supply the market with a new line of plastic crates this year. Buchanan says it is too early to predict its earnings contribution.
Batteries have a life of three to four years and must be replaced. This helps to buffer the industry against recessions. Despite the strong balance sheet, dividend cover is a high 3.6 times — well above the stated cover policy of about two. Buchanan explains the company is holding back funds for an acquisition when an attractive opportunity is found. Though a lower cover might lead to a firmer share price, so would an astute acquisition.

William Griffith

DARMAG

Retreating from tyres

Plastic and rubber manufacturer Darmag, a company in the Anglo fold, closed its tyre business at the end of March in the face of a surge in imports after tariff protection was reduced.
The business, being sold piecemeal, is not expected to go for more than a modest price because the machinery is old. The division that made forklift and underground mining vehicle tyres reported a small trading loss last year. The core business, battery case manufacture, which accounts for 65%-75% of group trading profit, increased volumes but on narrower margins.
Despite being the largest battery case manufacturer in SA, holding roughly 55% of the market, tough trading conditions made it necessary to shave margins to retain market share. There are three other large players in this field.
Numsa calls national strike

NUMSA will strike nationally in the metal, engineering, auto manufacturing, tyre and rubber industries on Monday in support of wage and job security demands. The 270 000-strong union expects the strike to be the biggest yet in SA if many non-members in the affected industries join the strike.

The strike is an industrial dispute separate from and likely to continue after the planned general strike. By Monday, Employer organisation Seifa said it was seeking a court interdict to declare Numsa's ballot invalid. The application will be heard early next week after the strike has already begun.

Seifa said it had already lodged a complaint with the industrial registrar, asking for an inquiry into ballot irregularities. Seifa claimed Numsa had not yet provided it with the outcome of the strike ballot in the metal and engineering industry, despite requests. It said 856 irregularities — including voting by non-members and unsealed ballot boxes — were reported by 272 of its member companies.

Numsa accused Seifa of failing to provide it with the outcome of its lock-out ballot and said Seifa had not responded to its allegations of irregularities in that ballot. The union yesterday said it suspected Seifa had either "bugged or made use of other dishonest means" to obtain information from its strike committee meetings after Seifa's announcement of Numsa's strike action before the union had done so.
Disappointment at BTR Dunlop

EDWARD WEST (17)

BTR Dunlop's 2.6% increase in earnings was boosted by a lower interest bill and cost-cutting measures in the six months to end-June 1992, but results for the year as a whole are expected to show little improvement over last year.

Trading conditions had not improved as hoped for, and although sales increased 1% to R330,2m (1991 interim: R325,4m), they declined 9% on an inflation adjusted basis, the tyre and industrial products group said in a statement yesterday.

Difficult trading conditions also affected margins and operating profit was 13.1% lower at R17,1m (R18,2m). Borrowings plummeted to R14,5m (R51,7m), and as a result finance costs fell to R2,8m (R5,4m).

Tax was lower at R16,1m (R21,3m) and attributable profit was 2.5% higher at R28,2m (R27,5m). Earnings, boosted by cost cutting measures, lower taxation and working capital levels, were 5.5% higher at 120c (117c) a share, MD Clive Hooper said.

Dividends were maintained at 60c a share. BTR Dunlop's dividend had not been cut for the past 20 years, a stockbroker's report on the group said.
Dunlop earns more on lower sales

By Stephen Cranstoun

Sales volumes from BTR Dunlop fell nine percent in the six months to June, compared with the first six months of 1991.

Nevertheless, earnings per share rose three percent to 120c, allowing the group to maintain the dividend at 60c.

MD Clive Hooper attributes the improvement to cost containment, a reduction in working capital resulting in lower finance charges, and reduced tax.

Turnover rose one percent to R328 million, but trading profit fell by 13.1 percent to R47.1 million.

Gearing is a low five percent, although this is set to increase with the group's capital expenditure programme.

It will spend R100 million over the next three years, mainly on upgrading plant.

Sales were lower to the mining industry and four divisions of the group supplying motor components to vehicle manufacturers were adversely affected by the 13 percent fall in vehicle sales.
Numsa ends strike in tyre sector

MORE than 5 000 workers in the tyre and rubber industry returned to work yesterday following Numsa's acceptance of a 12% wage increase and improved benefits.

Major tyre companies, including Gentyre, Tycom and Firestone, had virtually ceased production since the Numsa strike began in tandem with the ANC-backed national stayaway on Monday last week. Numsa's original demand had been for a 25% increase.

A meeting today between union negotiators and industry representatives will iron out the agreement's final clauses.

Settlement in the motor industry dispute was also likely today, Numsa spokesman Bernie Fanaroff said.

Last night employer and trade union officials were attempting to work out the package's outstanding issue of job security.

Employer spokesman Dave Kirby said motor manufacturing employers had agreed to establish a fund, financed by employers and jointly administered by the union, to provide counselling, job evaluation and training to those made redundant.

Deadlock was still in evidence yesterday in negotiations between Numsa and employers from the engineering industry represented by Seifsa.

Seifsa director Brian Angus said Seifsa would appeal against Friday's Supreme Court ruling that Seifsa and its constituent associations had no legal standing to bring an interdict to stop the strike on behalf of individual employers.

An application by Anglo American subsidiary Steeleendale Engineering for a Supreme Court interdict to declare the strike illegal was postponed yesterday until further notice.
South Africa is becoming a dumping ground for sub-standard tyres, says Tycon MD Rex Botha.

In many instances tyres that had been rejected by overseas manufacturers after failing their own quality examinations, were being exported to SA.

More than R172 million worth of tyres were imported in 1991, a R27 million increase on 1989.

"These tyres are only bargains until they go wrong," said Mr Botha.

Local tyre manufacturers had now approached the Board of Tariff and Trade seeking legislation that would ban the import of tyres which did not conform to quality or safety standards.

"We are looking at European standards as a barometer against which we can measure our own quality limits. Why reinvent the wheel when we can borrow benchmarks as set in the Emark legislation adopted by the EC?"

He says another problem being encountered was the importing of second-hand tyres, ostensibly as casings for the retreading industry.

"We honestly believe that South African tyre manufacturers can generate sufficient casings to keep the retread industry operating.

"If the minimum tread depth legislation of 1mm of tread through the entire circumference of the tyre was properly enforced, there would be adequate usable casings to recycle as retreads."

Mr Botha says a tyre is the only used commodity which is imported into South Africa. He says 8 million kg of casings, valued at R18 million, were imported in 1991.

Mr Botha argues that a used casing is an environmental problem, which is being addressed by tyre manufacturers.
Overseas operations help Trencon defy recession

Trencon continued defying the recession in the year to the end of June — lifting earnings by 23 percent to R130 million or 96c a share.

Shareholders were rewarded with a 22 percent higher dividend of 196c.

Directors said yesterday the results were achieved in spite of recessionary conditions confronting Trencon's domestic operations, and a weakening in the container market.

"While the divisions in South Africa managed to hold performance at last year's levels, overseas operations improved their contribution to earnings." The impact of the weaker container market (the main thrust of Trencon's export activity) was felt mainly in the second half of the year.

"Pressure on margins increased in the wake of new manufacturing capacity and foreign competitors' ability to offer low prices and attractive credit terms."

Turnover increased by more than 20 percent to R997.7 million — owing mainly to the acquisition of Crosscape Express, Swift Engineering and Poole Industries.

They said that for most of the year Trencon produced under favourable contracts, but warned that orders in the past six months were signed in a more competitive environment.

"In addition, the changing South African trade balance forced us to bear the costs of shipping containers to points of demand."

Directors pointed out that the impact of currency fluctuations on operations in the period under review was neutral as the strengthening of the rand against the US dollar was offset by weakness against other currencies.

Trencon was still exploring various opportunities to develop current areas of business with the proceeds of its successful debenure issue.

Holding company Mobile also reamined on the high road thanks to Trencon's strong performance.

Earnings were up significantly at R63 million or 221.1c a share for the period under review.

The dividend payout was also increased to 49.5c (previously 49.6c) a share.

Directors said satisfactory profits were achieved by Mobile Acceptances, the 74 percent held subsidiary engaged in finance and leasing activity.
Foreign activity helps Trencor

LINDA ENSOR

CAPE TOWN — Transport and manufacturing group Trencor offset stagnation in domestic operations with its overseas operations, exports and interest income to report a 23% increase in net earnings in the year to the end of June.

Earnings rose 23% to 90c a share from 734c, from which total dividends of 18c will be paid compared with last year's 16c.

Executive chairman Neil Jowell said the disparity between interim and final dividends was currently under review.

"The results were achieved in the face of recessionary conditions confronting domestic operations and a weakening in the container market, which is the main thrust of our export activity," he said.

"While the divisions in SA managed to hold performance at last year's levels, overseas operations improved their contributions to earnings."

Trencor manufactures trailers, tankers and containers and is involved in transport, tyres, exporting and trading. Undisclosed overseas operations and exports contribute more than half of net attributable income.

Turnover rose 20.5% to R997.7m (R829.2m), with pretax income increasing by 29% to R170m (R132m), of which R127m was interest earned on R260m raised in the debenture issue. On a slightly higher tax rate, attributable profit rose 23.5% to R130m (R105.2m).

Jowell said the sharp rise in turnover was mainly attributable to the acquisition of Crosscape Express, Swift Engineering and Poole Industries and the increase in the stake in Contred to 25.6%.

The tyre interest contributed lower than last year's because of pressure on margins caused by the flood of tyre imports.

The effect of the weaker container market was felt in the second half when pressure on margins increased from new manufacturing capacity and the ability of foreign competitors to offer low prices and attractive credit terms.

Jowell said that for most of the year Trencor produced earnings from previously negotiated favourable contracts but in the last six months orders were signed in a much more competitive environment. Also, the changing SA trade balance forced the group to bear the costs of shipping containers to points of demand.

Fluctuations in currencies had a neutral effect on the results.
No relief in sight

Sondor joint MD Robin Marx reckons Sondor mirrors the condition of secondary industry in SA. Demand for the closed cell plastic and rubber products it produces as a basic commodity for industrial uses, waxes and wanes according to the state of the economy, he says.

CONTINUED

On that basis, Sondor did reasonably well in fiscal 1992, when industry earnings generally were collapsing. Though EPS fell 17%, they include a substantial, undisclosed, but expected amount related to relocating newly acquired Fife Tape Converter’s operations to Sondor’s branch premises around the country. This included modifying production, marketing and accounting procedures to marry with those of the group. Without these costs, says Marx, EPS would have at least equalled those of 1991.

Three other points of interest arise from Sondor’s 1992 annual report. Firstly, the balance sheet shows a substantial increase in shareholders’ debenture account. This arose out of a scheme of arrangement in July last year to issue debentures that would replace existing distributable reserves of the company.

Secondly, should the Receiver of Revenue rule that tax allowances on film investment partnerships are to be retrospectively disallowed, it could hit Sondor hard. The company has raised a contingent liability for R7.8m. Marx expresses guarded optimism that the investment will qualify for the tax relief claimed.

Third, as only 8.8% of the ordinary shares are held by non-executive directors and the public and are seldom traded, this information is little more than academic to the stock market.

Marx reckons Sondor’s trade in the past two months has slumped. Judging by the sentiments expressed to the FM in recent weeks, that is an accurate reflection of the current state of secondary industry throughout the country.

Since there does not appear to be any short-term relief on the horizon, the position does not bode well for Sondor’s performance in its 1993 fiscal year.

Gerald Hirshon
NEOGTATIONS for the acquisition of a stake in Gentyre by Germany’s Continental were unlikely to be finalised until the socio-political situation in SA stabilised, Gentyre chairman Terry Rolfe said.

In his review of Gentyre’s results for the six months to end-June 1992, Rolfe said discussions for the acquisition of a minor stake in Gentyre were still taking place. Gentyre’s technology agreement with Continental would not be affected by the non-conclusion of the negotiations.

Sales of Gentyre’s industrial rubber products and tyres improved in the first half to R245,8m from R229,3m in 1991. However, operating margins fell to 9,3% from 10,9% at year-end and from 11,1% at the interim stage in 1991. As a result, operating profit was lower at R22,6m (Interim 1991: R25,4m). $100 = 31/18/92

Rolfe said the tyre division maintained, and in some sectors, improved its share of a market characterised by depressed demand which exacerbated stock build-ups and led to substantial price discounting in the second quarter.

EDWARD WEST (196)

The industrial rubber division’s contribution to earnings slumped because of poor trading conditions in the automotive and mining industries.

Interest received increased to R5,8m (R3,7m), not enough to prevent pre-tax profit dropping to R23,4m from R25,2m in the first half of 1991. Taxed profit was R22m (R29m). Attributable profits of R27,9m (R29m) translated to earnings of 179c (186c) a share. The interim dividend was maintained at 5c a share.

Rolfe said benefits from the introduction of new technology, in which the group had invested R100m over the past three years, were blunted in the first half by difficult trading conditions.

While accurate forecasting was impossible in the current unsettled environment, management was confident that measures taken to improve efficiency, expand local and export markets and promote profitability would produce creditable results for the year as a whole.
Gentyre pays same

Gentyre Industries maintained its dividend of 55c for the half-year to June, despite a further deterioration in trading conditions. Chairman Terry Rolfe says the tyre division did well to maintain and even improve its market share in some sectors, despite depressed demand and substantial price discounting in the second quarter.

Turnover increased by six percent to R243.8 million (1991: R220.3 million), while taxed profit was R28 million (R29 million).

Profit attributable to ordinary shareholders reached R21.9 million (R28.9 million), while earnings per share declined only four percent to 179c.

The industrial rubber division was affected by poor conditions in the mining and automotive industries, its primary customers, reducing its contribution to earnings, says Mr Rolfe.

Although the benefits of the introduction of new technology, especially in the tyre division, were blunted by the difficult trading conditions, management is confident that improvements in efficiency and the expansion of local and export markets should produce creditable results for the full year.

Gentyre says negotiations with Continental of Germany, referred to earlier in the year through a cautionary notice, are unlikely to be finalised until a more stable socio-political environment is experienced.

However, Gentyre's existing technology agreement with Continental remains unaffected by the negotiations, it says. — Sapa.
Exports help to keep Tiger Wheels on track

TIGER Wheels remained firmly on track in the year to end-June 1992 and managed to more than double attributable profit in spite of a tight squeeze on profit margins.

Boosted by the export of alloy wheels, the tyre and wheel group's attributable profit increased to R3,6m from R1,8m. Earnings were equivalent to 12,5c a share compared with 6,3c a share at the end of the 1991 financial year.

The annual dividend was raised to 5c a share from 4,5c a share. Shareholders were again given the opportunity of taking up bonus shares instead of the dividend — an option which attracted 83% of shareholders' support in the past.

Turnover increased 38% to R87,5m from R64,4m, mainly as a result of increased exports. Joint MD and CE Eddie Keiran said the group's growing overseas activities — exports had nearly doubled every year since 1982 — would be boosted by the acquisition of a stake in a greenfield company in the US to distribute its alloy wheels in North America.

He said start-up losses associated with the US operation offset profit generated in the group's other offshore venture in the UK and resulted in associated companies reporting losses of R19 000 (1991: R136 000).

The squeeze on margins was reflected in the 7% increase in income before interest to R6,5m from R6,1m. Margins were also down as a result of the group's efforts to gain market share, he said.

The interest bill was R2m (R1,7m) which left pre-tax profit 93% higher at R4,6m compared with R2,4m in 1991, when the group had to absorb a R2m abnormal loss as a result of raw material problems. Tax was R745 000 (R386 000).

The sale of property generated an extraordinary income of R1,8m which was not reported below the line.

The balance sheet was healthy, with shareholders' funds up by 40% to R19,2m (R13,7m). Interest-bearing debt fell to R6,5m from R7,6m, which left the debt/equity ratio close to 1:3.
BTR Dunlop gets new rating

EDWARD WEST

REPUBLIC Ratings has accorded BTR Dunlop a higher rating for its ability to honour short-term borrowings, but a lower rating for long-term debt.

Republic director Dave King attributed the "A1" short-term investment grading to BTR's track record, management and brand positioning. Financial risk was considered low with funding historically sourced from internal cash generation. Interest-bearing debt was minimal.

BTR was accorded less favorable "A-" rating for longer-term risk because of structural imbalances in the tyre manufacturing industry, King said.

With liberalisation of trade regulations, imports had made strong headway into the market as SA manufacturers had to source locally manufactured raw materials at uncompetitive prices, he said.

BTR's volumes and margins had fallen significantly over the past 18 months, a trend which Republic believed could be exacerbated; particularly if government declined the tyre manufacturer's application to raise ad valorem tariffs and ban the import of secondhand tyres.
Wayne Rubber Western Cape, the latest acquisition, did not perform as expected. It was hoped that it would boost turnover by about R23m. Financial director Charles Rapp says the company is only now showing signs of turning.

Though disclosure in the annual report is minimal, Rapp says the rubber division was the weakest performer. Nevertheless, it has the financial strength — the group is almost debt free — to maintain leadership in the supply of rubber and PVC products.

Through diversification Wayne now has footholds in the mining, agricultural, motor vehicle, pedestrian tiling and, more recently, the low-cost housing industries. Because the business is relatively capital-intensive, any increase in volumes will translate into bottom-line profits. While acquisitions remain possible, the plan is to expand activities into Africa.

Returns on equity and capital continue their negative trend, though benefits from the acquisition and rationalisation programmes should be reflected in 1993 figures.

The share may be undervalued on a p/e of 6.6 and dividend yield of 7.8% in view of the diversity of its markets and its sound financial management.

MaryLou Gregg
Tiger Wheels
expects to
keep rolling

Business Day Reporter

TIGER Wheels planned to maintain its present performance if conditions did not worsen significantly, joint chairman and CEO Eddie Keizan said in the company's annual report.

Political uncertainty, drought and the economic downturn in Europe and the US made forecasting "hazardous", but the company was poised to take advantage of any possible upturn in the economy.

Keizan said he was satisfied with the results achieved in the past financial year.

Management had succeeded in bringing group stock down to just less than 90 days from 101 days and debtors to 48 days from 52 days.

The company had a focused balance in its business operations, which were spread between manufacturing, wholesale and retail.

The company had investments in businesses on three continents and exported to all five, he said.

"It is this mix, combined with carefully chosen market niches — primarily in wheels and tyres — that has made the group less vulnerable to cyclical swings in the SA motor industry," he said.
Bid to streamline SA tyre manufacturers

A BOARD on Tariffs and Trade (BTT) investigation into the R1.6-billion-a-year tyre industry may lead to some rationalisation.

Tyre Manufacturers Conference (TMC) executive director Gert Fischer says certain tyres could be made by only one SA manufacturer. Different sizes would be spread among manufacturers.

SA produces about 250 sizes of various types of tyres based on specifications from vehicle manufacturers. They range from passenger, truck to earthmover, mining and tractor tyres.

Manufacturers find it costly to gear up for each size run and may consider sharing production.

By ZILLA EFRAT

However, varying technologies and raw materials used by different producers could pose a problem.

Dr Fischer says the TMC has suggested to the Government that the duty structure remain when import controls on tyres are lifted. It believes a higher formula duty should be introduced to counter imports of low-cost poor-quality tyres.

In exchange, the tyre industry would rationalise some of its operations and improve productivity.

The BTT investigation was initiated after the industry asked for higher protection from imports. Between 1988 and 1989, new-tyre import volumes rose by an average of 22% a year.

This growth is attributed to the competitiveness of Far Eastern exporters and the environmental hazard which used tyres pose in those countries.

SA manufacturers' share of the replacement market has been eroded to 65% from about 60% a few years ago. New and used imported tyres now claim 25% of this market. A factor is that imported used casings are sold as used tyres.

Dr Fischer says the SA industry cannot compete on equal terms with foreign manufacturers because of socio-economic, financial, technical and structural disadvantages.

The industry's costs are inflated by SA raw-material prices which are higher than elsewhere. SA raw materials rely heavily on import control.

Dr Fischer says the industry is, however, committed to competing internationally. It is also aware of the need to achieve world-quality standards at costs which would ensure the industry's future.

He says the BTT investigation aims to improve competition and productivity. It examines the industry's cost structure, including raw materials, and looks at technology, standardisation and safety.

The TMC has recommended that the European and US example of establishing standards for imported tyres be followed - a move that would allow protection to be reduced.

The results of the investigation are expected in about March next year.
European farmers on the march clash with police

STRASBOURG — Several dozen farmers protesting against an EC-US trade deal clashed with police yesterday when they tried to reach the European parliament building in Strasbourg.

Witnesses saw farmers ripping up paving stones and hurling objects at riot police who responded with volleys of tear gas.

Local officials said between 150 and 160 mostly French farmers had tried to break away from the march to reach the parliament but quickly gave up.

Organizers have urged the farmers, who came to Strasbourg from all over Europe and beyond, to remain peaceful. French Prime Minister Pierre Beregovoy warned at the weekend that any violence would undo damage to the farmers’ cause.

Local officials put the number of demonstrators at 40,000 by mid-morning. Up to 70,000 are expected to show up for the long demonstration.

In Tokyo, meanwhile, Japanese Prime Minister Kiichi Miyazawa told parliament yesterday Japan wanted a successful conclusion to GATT talks and sought a compromise.

The US-EC deal two weeks ago made Japan’s refusal to open its rice market a priority for the long delayed Uruguay Round talks under GATT.

Asked if Japan would continue to oppose GATT’s plan over rice imports, Miyazawa said: “The spirit of the Uruguay Round talks is for each country to make a compromise. Our country has a policy to lead the Uruguay Round talks to a successful conclusion through compromise.”

Miyazawa said Japan still wanted the GATT farm plan to be modified.

The plan asks importers of farm products to turn all non-tariff farm trade barriers into tariffs, ending Japan’s 47-year ban on rice imports.

Farm analysts interpreted Miyazawa’s comment to mean that Japan was prepared to end the ban if that was necessary for a successful conclusion of the talks.

Japan bans virtually all rice imports under its Food Control Law.

Agriculture Minister Masami Tanabe denied that the government had decided to end the import ban and was seeking high tariffs on rice imports and a long moratorium before importing began.

Informal meetings started in Geneva on Friday after GATT director-general Arthur Dunkel announced last Thursday that negotiators from 108 countries had agreed to try to reach a successful political conclusion of the round by the year-end.

But no fixed schedule for further negotiations has been decided. — Sapa-Reuters.

Bail extended for Maxwells

LONDON — A British court yesterday remanded Kevin and Ian Maxwell, sons of dead media magnate Robert Maxwell, on bail until April 1.

Britain’s Serious Fraud Office is investigating transfers that are alleged to have led to huge losses in Maxwell companies and in pension funds under management by private Maxwell firms.

Kevin, former chief executive of Maxwell Communications Corp., is charged with eight counts of theft and conspiracy to defraud totalling more than £135m. Ian faces one charge of conspiracy to defraud. — Sapa-Reuter.
Poor maintenance is to blame for blowouts

TYRE failures are the most frequent cause of accidents on our roads, next to driver error.

The front wheel blowout is a phenomenon for which the manufacturer invariably is blamed.

Blowouts are rarely caused by manufacturing defects. Research shows that the prime cause of this failure is underinflation.

Drivers seem ignorant of the importance of correct tyre maintenance, and for this reason often experience tyre failure.

A tyre is a pressure vessel. It is the air in the tyre and not the tyre itself that carries the load. The tyre serves to absorb shock, provide traction and dispense water.

Example

Here is an example of what underinflation does to a tyre. A 168X14 car tyre, with a recommended pressure of 3 bar, if run 25% underinflated or at 1.5 bar, will undergo the following changes:

- □ At a constant speed of 90km/h over a distance of 10km, the tyre will run at a temperature of 107 deg C and a 28% reduction in the strength of bonding agents will occur;
- □ At 110km/h, the temperature rises to 117 deg C and only 5% of the bonding will remain in place. Should the speed be maintained for a while, the tyre will begin to break up internally and eventually succumb to a blowout.

The breakdown of the bonding agents is irreversible. Simply inflating the tyre will not repair the damage.

A weekly pressure check at a filling station should reduce the risk of failure.

Smooth

Another major cause of tyre failure is worn or smooth tyres with little or no tread.

Tycoon service manager John Phyre says: "Smooth tyres are a major threat to highway safety. "A smooth tyre provides very little grip on wet roads and is also not puncture re-

Belt replacement now a reality

NOT long ago, belt damage spelled the death of an expensive radial casing.

Belt edge separation, rust, or damage from wheel lock-up rendered it useless.

Bandag has, however, made belt replacement a reality for pre-cured retreads. It is one of the advances in Bandag's B-B system, which makes it possible to remove and replace the top two belts of many steel-belted radial.

By adding re-belling to its repair techniques, Bandag can practically remanufacture a tyre, says marketing manager Glen Sherrell.

Bandag's belt replacement helps keep trailer and drive tyres on the road. With the ever increasing cost of new tyres and a shortage of radial casings, any extra life makes a big difference.

Combining re-belling with Bandag's advanced repair techniques, it is possible to get two or even more lives out of a casing. Field surveys indicate that as many as 56% of rejected casings could be salvaged back in service with Bandag's re-belling process.

Retreads recognised as a cost saving answer

AFTER labour and fuel, a motorist's biggest expense is tyres, and for this reason it pays to manage them carefully.

Bandag sales manager Glen Sherrell.

The acceptance of retreads has grown to the point where they have overtaken the new tyre market in terms of replacement of medium and heavy-duty truck tyres.

Sherrell says the main reason for this is cost effectiveness — 75% to 80% of a new tyre's cost is in its casing.

Retreads also reduce unnecessary waste.

The main elements of a tyre maintenance programme are inflation, inspection, repair and retreading. If you are to retread your original tyres you should aim to maintain the best possible casing. It is impossible to retread a poor casing.

The first element of successful tyre management is the purchase of the right tyre at the outset. Factors to be considered here are size, casing strength and tread design.

The next step is selecting a retreader. There are different retreading processes to choose from.

Top companies have the right equipment for mechanical testing.

Every tyre displays a memory of all the curbs and pot holes it has traversed, resulting in small separations between piles which cannot be detected by the naked eye. Mechanical inspection will find these defects and determine whether there are too many for safe retreading to be carried out.

If the anomalies are minor, the tyre can be returned to drive axle service after retreading. The next level is a casing that can be repaired for trailer axle use, then there is the casing which can be repaired for safe use in short-haul operations.
Pirelli is racing into 21st century

ITALIAN tyre manufacturer Pirelli is wasting no time developing tyres for the 21st century, if its latest prototypes are anything to go by.

Its two newest products, which boast a radical new tread pattern, are codenamed ZR4 and ZR5.

Pirelli says they should be ready for testing by leading car manufacturers by the mid-90s.

Both will exceed the much greater demands placed on them in terms of performance and safety by the next generation of supercars, which will boast a new range of intelligent systems for braking, steering and suspension.

Pirelli has applied for patent rights for the new ZRs. The tread patterns on the new tyres are said to take asymmetric and directional designs almost to the limit of modern development techniques.

Symmetry

Pirelli engineers describe the ZR/4 as a "tyre of longitudinally oblique symmetry" and the ZR/5 as a "longitudinally oblique directional tyre".

The ZRs are part of Pirelli’s continuous development programme, in which its advanced tyre organisation and motor-sport group work together on the development of tyres for road and track. The team's successes include the Pirelli P-Zero for 18-inch rims, which Ferrari adopted as standard equipment for its new S10T.

Until recently, 17-inch diameter was considered the limit. However, Pirelli is now supplying 19-inch tyres to teams competing in the European touring car championships.

Eagle GTA secret is F1 technology

GOODYEAR has adapted some of its racing technology to create the Eagle GTA high-performance road tyre.

Tyre technical manager Kevin Stevens says what makes the GTA different is the tread pattern.

"The GTA was developed to provide the motorist with great roadholding and performance in wet conditions. At the same time, the GTA is less noisy on the road while providing greater comfort."

Stevens believes that the fact that the GTA is derived from Formula One technology is what makes it such a great performer in both the wet and the dry.

The GTA makes use of a two-way groove in the tread pattern, which enables it to disperse water more effectively (Goodyear claims 25% a second) and helps to reduce tyre roar.

Goodyear attributes the GTA’s success to the fact that it is designed to maintain tension levels in the tyre carcass, allowing for a perfect balance between ride comfort and handling.

The greater the portion of rubber planted firmly on the road, the better the handling, is the theory. The use of computer technology has enabled Goodyear to test and prove this theory.

Research produced Goodyear’s highly successful low-profile Eagle Formula One tyre, which reaped instant rewards.

Tyre production and development manager Derrick Manefeldt says, "The Eagle GTA is designed to meet the needs of the motorist who seeks quality high-performance tyres for his car. This tyre allows the motorist to get the best in terms of comfort and performance."

"In the past, motorists who wanted high-performance tyres had to sacrifice a bit of comfort, but the new GTA overcomes this problem."

Race track technology adapted for the road makes Goodyear’s GTA a dynamic performer.
Business Day SURVEY

Tyre prices are set to soar as a result of an application for an increase in the duty on imported tyres. The call for increased duties is seen as an attempt to contain imports and to keep sub-standard tyres off the market. It also coincides with the Board on Trade and Industry's intention to lift import control on tyres and rubber products. 

Johann van Logterenbergh reports.

Pay attention to trailer wheels

Press are often towed at speeds that their tyres were not designed to cope with, rendering them very unsafe.

With this in mind, trailer users should note that modern vehicles are capable of maintaining high speeds, so it is a good idea to ensure that the tyres fitted to your caravan or trailer are rated according to your travelling speed.

A trailer that sways, is unstable at more than 100km/h or bobs badly can be improved by simply changing tyres.

Tiger Wheels technical manager Kevin Lee says that by fitting a wide, low-profile tyre such as a 185/70HR10 Yokohama (most trailers sport 10-inch rims today), the trailer will prove to be more stable at speed.

The H-rating on the Yokohama indicates that it is rated for speeds of 210km/h.

The Yokohama also has a higher load rating than that of its opposition and is capable of supporting a heavily laden trailer without restricting towing speed, he says.

Tiger recommends that trailers not in regular use or stored in the open have their wheels covered with opaque plastic to protect tyres from UV damage.

Caravans should be jacked up on their stabiliser stands, and trailers should be stored empty to ensure that the tyres do not become flat-spotted.

Gentyre's motor racing triumph

Continental tyres manufacturer Gentyre has reason to celebrate since its tyres again helped clinch the prestigious Class A Group N Championship, for the fourth year in a row.

"We are particularly pleased that we not only won the top class of this popular class of racing with our high performance CV90 Sport Contact tyres, but took the manufacturer's award too, in one of the most competitive years in the history of this

Saloon car series," said Gentyre marketing and sales director Roger Tait. "To top it all, our bottom-of-the-range Continental CS21s fitted to 1400cc cars won Class E for cars producing up to 55kW."

Continental tyres were also fitted to all BMWs, Toyotas and Opels that set-up and broke every SA speed and endurance record. They were also fitted to the Opel rekord Moon mission cars that travelled 572 000km in one year.

Radical performance change likely

The performance of tyres of the future will certainly be radically different from those of today, says Fred Kovac, Goodyear's vice-president of tyre technology worldwide.

At first glance, future tyres might not appear very different from those of the past. However, closer inspection will disclose more water-chasing aqua-channels.

Asymmetrical tread patterns, allowing tyres to perform well under varying road conditions, will grow in popularity, as will "smart tyres" and tyres specially engineered for electric compound chemistry, says Kovac. However, the biggest changes will be unseen. Improved construction materials and methods using complex rubber chemistry are likely.

Expand

Product design and advanced OE technology chief engineer Bill Egan says aqua-channels and asymmetrical tread patterns enable Goodyear engineers to "expand a tyre's performance envelope with minimal traditional tyre engineering trade-offs in handling, traction, treadwear, noise and rolling resistance."

In the past, increasing a tyre's traction capabilities with a softer, stickier rubber compound meant faster wear. Improving one feature of a tyre's performance resulted in reducing another aspect, an expected trade-off in tyre technology.

In 1991, Goodyear's work on energy-efficient tyres produced a proposal for a new E-metric tyre complying with US regulations. It operates at higher air inflations, reduced load percentages and is expected to be used on standard vehicles in the future to improve fuel efficiency.

Booklet d help drive

To enable buyers and users of Pirelli tyres to get the most from their investment, local distributor Performance Tyres has published a handy customer care booklet on car tyres and safety.

Compiled with the help of approved Pirelli dealers, the guide gives a wide range of tips.

How to read your tyre markings, tread life on various surfaces, understanding aspect ratios, rotation and balancing, towing and dealing with punctures and blowouts are among the many areas focused on in the booklet.

Performance Tyres
That is what they received. Jaap du Plessis built up a lorry from an old Buick and Joe Jowell was soon on the road to Bitterfontein.

It was a historic trip which did not end when Joe Jowell’s first truck returned to Springbok laden with the town’s supplies.

It was the start of a long and successful journey into the future which resulted in the small transport base on which today’s fast-moving Trenco was built.

By the time Neil Jowell and his brother Cecil came into the business, Jowell's Transport of Namaqualand was a thriving concern whose red trucks were a familiar sight across the landscape.

In 1973 after his father died, Neil Jowell took over as chairman armed with a DCom LLB from the University of Cape Town and an MBA from Columbia University in the US.

The company expanded its growing transport base and started looking for acquisitions.

EARLY

Trailer manufacturer Henred was bought in the late 1960s and was a major milestone for Trenco, taking it into manufacturing in a big way.

The purchase of British Leyland’s trailer manufacturing side and the Fruenhauf franchise for South Africa introduced Trenco to Fruenhauf, the largest trailer maker in the US.

When containerisation became popular, Fruenhauf started making containers and Trenco subsidiary Henred-Fruenhauf designs and builds a range of truck trailers and road tankers, like this 40 000-litre stainless steel fuel tank.
In the mould of all Tencor's recent moves, the sale of its holding in Contred to Consol for R210m cash makes sound sense. In the old days, there was place for a tyre operation in the Jowell's Transport organisation. But in the current structure, the 25.6% holding in Contred has been more of a portfolio investment than a core business.

Director Cecil Jowell says Tencor did not initiate the sale. But when Consol's offer looked fair value, it was thought to be worth taking. It bolsters liquidity to about R310m and further strengthens the ability to take advantage of any major trading opportunities that may arise. Moreover, NAV leaps by 22.3%, indicating a healthy capital gain.

Tencor's earnings in its past financial year were boosted by interest earned on the proceeds of a R260m rights issue last December. About R150m was used to repay short-term borrowings and the balance invested. High interest rates throughout the year magnified the benefits.

The remaining R110m has been earmarked mostly for the foreign Textainer Group (Fox November 6), in which Tencor will take up a significant minority stake once the Reserve Bank formalises the transaction. The liquidity created by the Contred sale is, therefore, timely.

After the deal, Consol will own 100% of Contred, whose two wholly owned operating subsidiaries are Tycon, which makes tyres and tubes under the Goodyear and Kelly brands, conveyor belting, other industrial rubber products and PVC foodwrap and Tredcor, which makes tread rubber, retreads and operates under the Massiertreads and Trentyres names.
